Visual proficiency - A perspective on art education Kunibert Bering,Rolf Niehoff,2015-12-18 Every day, over a million images are uploaded to flickr. This is a striking example of the so-called »flood« of images that emerged with the beginning of the digital age. A generation of adolescents has already been socialised with this flood of images and deals with it on a daily basis, both in their networks and elsewhere. Art education thus faces significant challenges: art is the only school subject that deals with the problems inherent in images as images, making them the focus of pedagogic activity. This volume presents both the foundations for engaging with the phenomenon of the »image« in a competent and historically informed manner as well as the perspectives for art education that arise from these foundations. It is based upon the conviction that providing orientation in a world defined by images does not mean following solely a technocratic, functionalist or even neoliberal »concept of education«. Quite the contrary: »providing an orientation« for how to deal with images in a world that is dominated by them is a crucial part of the holistic development of young people's personalities. The volume's main focus lies upon the new functions taken on both by the image and by art more generally. It takes into account aspects of globalisation and participation and also includes more unusual views (often from a cross-media perspective) of art and its historical repertory, which even current image creation is unable to dispense with. The volume also deals extensively with architecture and the images it conveys.

Responsive & Fast Guy Podjarny,2014-08 Is Responsive Web Design (RWD) slowing your site down? It doesn't have to. With this concise book, you'll learn practical techniques for improving performance with RWD, including a default set of guidelines you can use as an easy starting point. Web performance researcher and evangelist Guy Podjarny walks you through several existing solutions for dealing with RWD performance problems, and offers advice for choosing optimizations that will be most useful for your needs. RWD performance problems stem from excessive downloads of resources, including images, JavaScript and CSS, and HTML—downloads designed to let your web application adapt to different screen sizes. Podjarny presents a series of increasingly larger-scope solutions to each issue, including client-side techniques and RESS (Responsive + Server Side Components). Address performance issues by starting with Podjarny's default guidelines Use a JavaScript image loader and an image transcoding service to create Responsive Images Reduce JavaScript and CSS downloads with asynchronous scripts, conditional loading, and multi-viewport CSS Prioritize resources to avoid excess content in RWD and defer the load of any content that's not critical Explore server-side Adaptive Delivery and RESS solutions as an alternative to "pure" RWD Guy Podjarny, or Guypo for short, is the Chief Technology Officer (CTO) of Akamai's Web Experience business unit.

Flash MX Studio Connor McDonald,Jon Steer,Jerome Turner,Abe White,Gerald YardFace,Matthew Baldwin,Steve Webster,David Tudury,2013-11-11 Flash MX Studio takes your raw Flash talent and multiplies its potency by focusing it on real-world web design situations. In the heady days of the late 1990s, designers were trying their hand at anything and everything they could lay their hands on. Now the marketplace is seriously focused, and serious Flash designers have to know exactly what they're doing and why. These days, it's all about functionality over experimentation, justification over style. It's all about maturity. The design must fit the job specs, and this book shows the reader how to fulfill these requirements and more. This book examines all the avenues open to professional or aspiring professional Flash MX designers. It takes a look at advanced uses of the new MX features, such as components and the Drawing API, and gives guidance on building whole new structures for animation, Dynamic Content, PHP, ColdFusion MX, XML, video, audio and audiovisual formats. Never before has so much power been so accessible to the web designer. This book is designed to put that power in your hands. Flash MX Studio has been broken into four sections to address the most common needs for the Flash designer. First off, Jamie McDonald provides five chapters on site presentation and the principles of web design. These opening chapters take a look at how to create slick, professional-level sites, involving Flash MX's new drawing and motion capabilities and interactive techniques. The second section concentrates on ActionScript. Flash's resident coding environment is crucial to master, and taps into Flash's great strength—intuitive and interactive applications. Keith Peters and Todd Yard have buddied up on this section, and examine some of the most advanced ActionScript techniques around. Be warned—this section is not for the faint-hearted! Section three takes a look at Flash MX's greatly improved visual, audio and audiovisual capabilities. Its three chapters, written by Jez Turner and Alex White, concentrate on building a single site aimed at displaying rich media content. The final section is devoted to expounding a few myths about dynamic content using Flash. Its four chapters talk about general practice, before focusing in on specific areas, including introductions to PHP and XML, together with a look at Macromedia's brand new ColdFusion MX.

What in the World is Music? Alison E. Arnold,Jonathan C. Kramer,2023-09-13 What in the World is Music? Second Edition is an undergraduate, interactive e-textbook that explores the shared ways people engage with music and how humans organize and experience sound. It adopts a global approach, featuring more than 300 streaming videos and 50 streaming audio tracks of music from around the world. Drawing from both musicological and ethnomusicological modes of inquiry, the authors explain the nature and meaning of music as a universal human practice, making no distinction between Western and non-Western repertoires while providing students with strong points of connection to the ways it affects their own lives. The What in the World is Music? curriculum is divided into five parts, with a fully integrated multimedia program linked directly to the chapters: The Foundations of Music I proposes a working definition of music and considers inquiry-guided approaches to its study: Why do humans have innate musical perception? How does this ability manifest itself in the human voice? A catalog of musical instruments showcases global diversity and human ingenuity. The Foundations of Music II continues the inquiry-guided approach, recognizing the principles by which musical sound is organized while discussing elements such as rhythm, melody, harmony, texture, form, genre, and style. Where did music come from? What is it for? Music and Identity examines how music operates in shaping, negotiating, and expressing

human identity and is organized around three broad conceptual frames: the group, hybridity, and conflict. Music and the Sacred addresses how music is used in religious practices throughout the world: chanting sacred texts and singing devotional verses, inspiring religious experience such as ecstasy and trance, and marking and shaping ritual space and time. Music and Social Life analyzes the uses of music in storytelling, theater, and film. It delves into the contributions of sound technologies, while looking at the many ways music enhances nightlife, public ceremonies, and festivals.
