United States. Navy Department. Surface Missile Systems Project

U.S. Air Force Tactical Missiles George Mindling, Robert Bolton, 2008 The U.S. Air Force Tactical Missiles, 1949-1969, The Pioneers offers the rich, fascinating history of the first surface-to-surface tactical missiles of the U.S. Air Force, the winged, nuclear-capable Matador and Mace missiles, and their units and personnel in West Germany, Taiwan, Korea, Okinawa and the United States. The U.S. Air Force Tactical Missiles, 1949-1969, The Pioneers ties that unique era and those of other tactical missiles together in a remarkably broad, deep and valuable perspective that also includes the World War II German V-1 and reaches back all the way to the first flight in the United States in 1916 of an aircraft not controlled by a pilot.

From Polaris to Trident Graham Spinardi, 1994-01-06 This book provides a complete history of the US Fleet Ballistic Missile programme from its inception in the 1950s and the development of Polaris to the deployment of

Trident II in 1990. Writing in an accessible yet scholarly manner, Graham Spinardi bases his historical documentation of FBM development on interviews with many of the key participants. His study confronts a central issue: is technology simply a tool used to achieve the goals of society, or is it an autonomous force in shaping that society? FBM accuracy evolved from the city-busting retaliatory capability of Polaris to the silo-busting 'first strike' potential of Trident. Is this a case of technology 'driving' the arms race, or simply the intended product of political decisions? The book provides a comprehensive survey of the literature looking at the role of technology in the arms race, and seeks to explain technological development using a 'sociology of technology' approach.

Hypersonic Missile Nonproliferation Richard H. Speier, George Nacouzi, Carrie Lee, Richard M. Moore, 2017-09-27 This report examines the implications of the proliferation of hypersonic missiles and possible measures to hinder it. This report first explores some of the potential strategic implications of the proliferation of hypersonic missile technology beyond the three major powers, the United States, Russia, and China. It then examines the process of such proliferation. And finally, it discusses possible means for hindering such proliferation.

White Sands Missile Range Darren Court, 2009 Since the official flag raising

on July 9, 1945, the White Sands Missile Range (WSMR) has become an integral part of global defense for the United States. A mere week after formation, Project Trinity tested the first atomic bomb at an isolated site, which was 100 miles north on what was then part of the Alamogordo Bombing Range--a test site for B-17 pilots. Back at White Sands Proving Ground, as it was then named, personnel were unaware of the massive new weapon tested to their north. Instead their focus was upon the arrival of what would be 300 railroad cars of captured German V-2 rockets and associated equipment. Later that year, over 100 captured German scientists, among them Werner von Braun, would arrive at White Sands to assist in V-2 technology, launching America's race to space; tens of thousands of rockets and missiles have since been fired on the range. Thousands of family members also lived and worked at the range, and their stories can be found inside as well.
