Introduction to Web Development Using HTML 5 Kris Jamsa,2013-05 Filled with thousands of real-world examples, this text: introduces Web development to first-time developers; covers all aspects of webpage design; provides detailed coverage of webpage formatting using CSS; presents the use of JavaScript and JQuery to automate webpages; presents the HTML 5 canvas that developers can use to display charts, graphs, and more within a page; covers drag-and-drop processing; introduces location-aware applications; and teaches users how to use asynchronous programming to achieve multitasking within a webpage. HTML 5 allows Web developers not only to build pages for the World Wide Web, but also to build pages for mobile devices and tablet PCs. The book starts with an introduction to standard HTML and its use in creating traditional websites. Within this context, it then teaches developers how to format and style their pages using cascading style sheets (CSS) and how to automate pages using JavaScript and JQuery. --

Fundamentals of the Theory of Computation: Principles and Practice Raymond Greenlaw,H. James Hoover,1998-07-14 This innovative textbook presents the key foundational concepts for a one-semester undergraduate course in the theory of computation. It offers the most accessible and motivational course material available for undergraduate computer theory classes. Directed at undergraduates who may have difficulty understanding the relevance of the course to their future careers, the text helps make them more comfortable with the techniques required for the deeper study of computer science. The text motivates students by clarifying complex theory with many examples, exercises and detailed proofs. * This book is shorter and more accessible than the books now being used in core computer theory courses. * Theory of computing is a standard, required course in all computer science departments.

Restoration of Amundsen's lantern slides Pietro Librici,2017-06-03 The book presents for the first time the restoration of Amundsen's glass slides, one of the most beautiful collections of slides in the world. The 248 slides are the photographic testimony of three great explorations: the Northwest Passage (1903-1906), the conquest of the South Pole (1910-1912) and the Maud expedition (1918-1925). Discovered by chance in 1986, the slides were restored in 2009 by Pietro Librici at the National Library of Norway, in a continuous cooperation with the institute team. The restoration is presented analytically in its methodological, technical, scientific and operational aspects, constituting an updated model of intervention. Critical historical studies that accompanied the restoration and the expressive features of the slides have also led the author to identify Amundsen's own style which lies between documentary photography and photographic documentation and make the book a particular opportunity to immerse in the charm of polar expeditions, in the first years of the 20th century when the poles were the only areas of terra incognita left on the world map. HTML, CSS, Bootstrap, Php, Javascript and MySql Olga Maria Stefania Cucaro,2022-02-08 This book aims to initiate those who want to independently create a website, to the world of domains and programming linked to the web. The author conceived this work as a scientific work intended for educational and study use for all those who approach the study of client-side and server-side programming. In the first place the difference between the various domains existing on the network will be explained and at a later time we will try to explain the CSS and HTML and then enter the PHP programming (server side) and JavaScript (client side) with the creation of databases via phpMyAdmin. All this will be explained through an example website created specifically using a free Bootstrap for simplicity and basic convenience and programming a control panel with login connected to the site via database for inserting images directly from the web by uploading them to the database created with connected phpMyAdmin to the site. Obviously, after entering the world of databases and programming, you can apply this knowledge to any other need for iteration by the user required by the site project. The aim of this study is not to create simple web pages that today can be done easily with WordPress or other easy-to-use software, but for purely educational purposes to explain the use of databases and server and client-side programming to make a dynamic otherwise static site. In summary, this work can be useful for those who want to approach the fascinating world of website programming from the beginning.

Visual Information Retrieval Using Java and LIRE Mathias Lux,Oge Marques,2013 Visual information retrieval (VIR) is an active and vibrant research area, which attempts at providing means for organizing, indexing, annotating, and retrieving visual information (images and videos) from large, unstructured repositories. The goal of VIR is to retrieve matches ranked by their relevance to a given query, which is often expressed as an example image and/or a series of keywords. During its early years (1995-2000), the research efforts were dominated by content-based approaches contributed primarily by the image and video processing community. During the past decade, it was widely recognized that the challenges imposed by the lack of coincidence between an image's visual contents and its semantic interpretation, also known as semantic gap, required a clever use of textual metadata (in addition to information extracted from the image's pixel contents) to make image and video retrieval solutions efficient and effective. The need to bridge (or at least narrow) the semantic gap has been one of the driving forces behind current VIR research. Additionally, other related research problems and market opportunities have started to emerge, offering a broad range of exciting problems for computer scientists and engineers to work on. In this introductory book, we focus on a subset of VIR problems where the media consists of images, and the indexing and retrieval methods are based on the pixel contents of those images -- an approach known as content-based image retrieval (CBIR). We present an implementation-oriented overview of CBIR concepts, techniques, algorithms, and figures of merit. Most chapters are supported by examples written in Java, using Lucene (an open-source Java-based indexing and search implementation) and LIRE (Lucene Image REtrieval), an open-source Java-based library for CBIR.

Ecology of Fire-Dependent Ecosystems Devan Allen McGranahan,Carissa L. Wonkka,2020-12-29 Ecology of Fire-Dependent Ecosystems is brimming with intriguing ecological stories of how life has evolved with and diversified within the varied fire regimes that are experienced on earth. Moreover, the book places itself as a communication between students, fire scientists, and fire fighters, and each of these groups will find some familiar ground, and some challenging aspects in this text: something which ultimately will help to bring us closer together and enrich our different approaches to understanding and managing our changing planet. -- Sally Archibald, Professor, University of the Witwatersrand, Johannesburg, South Africa Most textbooks are as dry as kindling and about as much fun to sink your teeth into. This is not that kind of textbook. Devan Allen McGranahan and Carissa L. Wonkka have taken a complex topic and somehow managed to synthesize it into a comprehensive, yet digestible form. This is a book you can read cover to cover – I know, I did it. As a result, I took an enlightening journey through the history and fundamentals of fire and its role in the natural and human world, ending with a thoughtful review of the evolving relationship between humans and wildland fire. -- Chris Helzer, Nebraska Director of Science, The Nature Conservancy, and author of The Prairie Ecologist blog Ecology of Fire-Dependent Ecosystems: Wildland Fire Science, Policy, and Management is intended for use in upper-level courses in fire ecology and wildland fire management and as a reference for researchers, managers, and other professionals involved with wildland fire science, practice, and policy. The book helps guide students and scientists to design and conduct robust wildland fire research projects and critically interpret and apply fire science in any management, education, or policy situation. It emphasizes variability in wildland fire as an ecological regime and provides tools for students, researchers, and managers to assess and connect fire environment and fire behaviour to fire effects. Fire has not only shaped social and ecological communities but pushed ecosystems beyond previous boundaries, yet understanding the nature and effects of fire as an ecological disturbance has been slow, hampered by the complexity of the dynamic interactions between vegetation and climate and the fear of the destruction fire can bring. This book will help those who study, manage, and use wildland fire to develop new answers and novel solutions, based on an understanding of how fire functions in natural and social environments. It reviews literature, synthesizes concepts, and identifies research gaps and policy needs. The text also explores the interaction of fire and human culture, demonstrating how fire policy can be made adaptable to cultural and socio-ecological objectives.

Evocations of the Calf? Alec J. Lucas,2014-12-11 This study proposes that both constitutively and rhetorically (through ironic, inferential, and indirect application), Ps 106(105) serves as the substructure for Paul's argumentation in Rom 1:18-2:11. Constitutively, Rom 1:18-32 hinges on the triadic interplay between "they (ex)changed" and "God gave them over," an interplay that

creates a sin–retribution sequence with an a-ba-ba-b pattern. Both elements of this pattern derive from Ps 106(105):20, 41a respectively. Rhetorically, Paul ironically applies the psalmic language of idolatrous “(ex)change” and God’s subsequent “giving-over” to Gentiles. Aiding this ironic application is that Paul has cast his argument in the mold of Hellenistic Jewish polemic against Gentile idolatry and immorality, similar to Wis 13–15. In Rom 2:1–4, however, Paul inferentially incorporates a hypocritical Jewish interlocutor into the preceding sequence through the charge of doing the “same,” a charge that recalls Israel’s sins recounted in Ps 106(105). This incorporation then gives way to an indirect application of Ps 106(105):23, by means of an allusion to Deut 9–10 in Rom 2:5–11. Secondly, this study suggests that Paul’s argumentation exploits an intra-Jewish debate in which evocations of the golden calf figured prominently.

A Quantum City Ludger Hovestadt,Vera Bühlmann,2015-06-16 We know the specific strengths of various cities, are aware of their ranking, are able to discuss their density and growth. But what do all cities have in common, what do we know about the “lowest common denominator”? The “city as a species”, the “primal genetic material of the city”: this is the subject of A Quantum City. This colossal work is a love letter to the city and intellectual culture. We follow the fictional narrative figure, Orlando, beginning in 320 BC, on his odyssey through the Western world up to the present time. The book is divided into four interrelated chapters and can be read page by page in a discursive manner, however randomly browsing through the book also offers new and multi-faceted interpretations. Great intellectual achievements are compared with obscure and mundane events. A Quantum City offers an inspiring view of the city that is in us and around us.

Languages of Mainland Southeast Asia N.J. Enfield,Bernard Comrie,2015-03-30 The studies in this book represent the rich, diverse and substantial research being conducted today in the linguistics of Mainland Southeast Asia. The chapters cover a broad scope. Several studies address questions of language relatedness, often challenging conventional assumptions about the status of language contact as an explanatory factor in accounting for linguistic similarities. Several address the question of Mainland Southeast Asia as a linguistic area, exploring new ways to imagine and define the boundaries, and indeed the boundedness, of a Mainland Southeast Asia area. Two contributions rethink the received notion of the 'sesquisyllable' with new empirical and theoretical angles. And a set of chapters explores topics in the morphology and syntax of the region's languages, sometimes challenging orthodox assumptions and claims about what a typical language of Mainland Southeast Asia is like. Written by leading researchers in the field, and with a substantial overview of current knowledge and new directions by the volume editors N. J. Enfield and Bernard Comrie, this book will serve as an authoritative source on where the linguistics of Mainland Southeast Asia is at, and where it is heading.
