📖 In the Wrong Place - Alien Marine Crustaceans: Distribution, Biology and Impacts Bella S. Galil,Paul F. Clark,James T. Carlton,2011-04-01 In The Wrong Place: Alien Marine Crustaceans - Distribution, Biology And Impacts provides a unique view into the remarkable story of how shrimps, crabs, and lobsters – and their many relatives – have been distributed around the world by human activity, and the profound implications of this global reorganization of biodiversity for marine conservation biology. Many crustaceans form the base of marine food chains, and are often prominent predators and competitors acting as ecological engineers in marine ecosystems. Commencing in the 1800s global commerce began to move hundreds – perhaps thousands – of species of marine crustaceans across oceans and between continents, both intentionally and unintentionally. This book tells the story of these invasions from Arctic waters to tropical shores, highlighting not only the importance and impact of all prominent crustacean invasions in the world’s oceans, but also the commercial exploitation of invasive crabs and shrimps. Topics explored for the first time in one volume include the historical roots of man’s impact on crustacean biogeography, the global dispersal of crabs, barnacle invasions, insights into the potential scale of tropical invasions, the history of the world’s most widely cultured shrimp, the invasive history and management of red king crabs in Norway, Chinese mitten crabs in England, and American blue crabs in Europe, the evolutionary ecology of green crabs, and many other subjects as well, touching upon all ocean shores.

📖 Animal Contests Ian C. W. Hardy,Mark Briffa,2013-05-30 Contests are an important aspect of the lives of diverse animals, from sea anemones competing for space on a rocky shore to fallow deer stags contending for access to females. Why do animals fight? What determines when fights stop and which contestant wins? Addressing fundamental questions on contest behaviour, this volume presents theoretical and empirical perspectives across a range of species. The historical development of contest research, the evolutionary theory of both dyadic and multiparty contests, and approaches to experimental design and data analysis are discussed in the first chapters. This is followed by reviews of research in key animal taxa, from the use of aerial displays and assessment rules in butterflies and the developmental biology of weapons in beetles, through to interstate warfare in humans. The final chapter considers future directions and applications of contest research, making this a comprehensive resource for both graduate students and researchers in the field.

📖 Everyone Can Learn Origami Peter Saydak,2017-11-18 The ultimate book for beginners who want to learn origami! In this book you’ll learn all the basic folds and techniques through incredibly detailed sets of diagrams and written instructions. After learning the basics you’ll find easy to follow instructions showing how to fold 77 traditional origami models including animals, flowers, insects, boxes and much more. By working through this book and folding the different models you’ll practice all the different folds and techniques, improving your skills and folding progressively more complex origami. When you reach the end you’ll know everything you need to become an origami master! Please note, this book is not for you if you’re already an origami expert. If you know how to fold the traditional origami frog from a frog base then you probably already know everything this book can teach you.

📖 Richard Serra: Early Work Richard Serra,2014-02-28 Published to celebrate the critically acclaimed 2013 exhibition at David Zwirner in New York, a show that The New York Times art critic Ken Johnson called “near perfect,” Richard Serra: Early Work devotes over three hundred pages to a key five-year period of the artist’s earliest work. Anchored by exquisite black-and-white plates, from installation views of works in situ to documentary photographs, this “impressively realized” publication offers “a blow-by-blow account of Serra’s rapidly expanding art-world presence,” as described in a Bookforum review. Focusing specifically on work the artist produced during the period between 1966 and 1971, this classic tome documents the significance of his early work, with archival texts and reviews, alongside new scholarship by American art critic and historian Hal Foster. Produced in close collaboration with the artist, this monograph aims to reconsider the groundbreaking practices and ideas that so firmly situate Serra in the history of twentieth-century art. Its stunning selection of seminal works illuminates the debut of the artist’s innovative, process-oriented experiments with nontraditional materials, such as vulcanized rubber, neon, and lead, and introduces the interplay of gravity and material—of verticality and horizontality,” writes Foster—that would remain a fundamental aspect of Serra’s production over the subsequent decades. Also featured in the publication are key early examples of the artist’s work in steel, as well as stills from some of his most important early films.
