The Gold Rush Kate Shoup, 2017-07-15 California became a territory in the United States when the Treaty of Guadalupe Hidalgo was signed in 1848. That treaty ended the Mexican War. Several days before its signing, gold was discovered at Sutter's Mill in what is now Sacramento. The non-Native population of the territory was less than one thousand in 1848, but the gold rush increased that number to one hundred thousand by the end of 1849. The gold rush not only made many people wealthy, it brought ecologic devastation while speeding up California's statehood. This book richly explores this fascinating part of history.

The History of the World in 100 Plants Simon Barnes, 2022-10-27 From the author of *The History of the World in 100 Animals*, a BBC Radio Four Book of the Week, comes an inspirational new book that looks at the 100 plants that have had the greatest impact on humanity, stunningly illustrated throughout. As humans, we hold the

planet in the palms of our hands. But we still consume the energy of the sun in the form of food. The sun is available for consumption because of plants. Plants make food from the sun by the process of photosynthesis; nothing else in the world can do this. We eat plants, or we do so at second hand, by eating the eaters of plants. Plants give us food. Plants take in carbon dioxide and push out oxygen: they give us the air we breathe, direct the rain that falls and moderate the climate. Plants also give us shelter, beauty, comfort, meaning, buildings, boats, containers, musical instruments, medicines and religious symbols. We use flowers for love, we use flowers for death. The fossils of plants power our industries and our transport. Across history we have used plants to store knowledge, to kill, to fuel wars, to change our state of consciousness, to indicate our status. The first gun was a plant, we got fire from plants, we have enslaved people for the sake of plants. We humans like to see ourselves as a species that has risen above the animal kingdom, doing what we will with the world. But we couldn't live for a day without plants. Our past is all about plants, our present is all tied up with plants; and without plants there is no future. From the mighty oak to algae, from cotton to coca here are a hundred reasons why.

Topology of Digital Images James F.

Peters,2014-01-28 This book carries forward recent work on visual patterns and structures in digital images and introduces a near set-based a topology of digital images. Visual patterns arise naturally in digital images viewed as

sets of non-abstract points endowed with some form of proximity (nearness) relation. Proximity relations make it possible to construct uniform topologies on the sets of points that constitute a digital image. In keeping with an interest in gaining an understanding of digital images themselves as a rich source of patterns, this book introduces the basics of digital images from a computer vision perspective. In parallel with a computer vision perspective on digital images, this book also introduces the basics of proximity spaces. Not only the traditional view of spatial proximity relations but also the more recent descriptive proximity relations are considered. The beauty of the descriptive proximity approach is that it is possible to discover visual set patterns among sets that are non-overlapping and non-adjacent spatially. By combining the spatial proximity and descriptive proximity approaches, the search for salient visual patterns in digital images is enriched, deepened and broadened. A generous provision of Matlab and Mathematica scripts are used in this book to lay bare the fabric and essential features of digital images for those who are interested in finding visual patterns in images. The combination of computer vision techniques and topological methods lead to a deep understanding of images.

What in the World is Music? Alison E. Arnold,Jonathan C.
 Kramer,2023-09-13 What in the World is Music? Second
 Edition is an undergraduate, interactive e-textbook that
 explores the shared ways people engage with music and
 how humans organize and experience sound. It adopts a
 global approach, featuring more than 300 streaming videos
 and 50 streaming audio tracks of music from around the
 world. Drawing from both musicological and
 ethnomusicological modes of inquiry, the authors explain
 the nature and meaning of music as a universal human

practice, making no distinction between Western and non-Western repertoires while providing students with strong points of connection to the ways it affects their own lives. The What in the World is Music? curriculum is divided into five parts, with a fully integrated multimedia program linked directly to the chapters: The Foundations of Music I proposes a working definition of music and considers inquiry-guided approaches to its study: Why do humans have innate musical perception? How does this ability manifest itself in the human voice? A catalog of musical instruments showcases global diversity and human ingenuity. The Foundations of Music II continues the inquiry-guided approach, recognizing the principles by which musical sound is organized while discussing elements such as rhythm, melody, harmony, texture, form, genre, and style. Where did music come from? What is it for? Music and Identity examines how music operates in shaping, negotiating, and expressing human identity and is organized around three broad conceptual frames: the group, hybridity, and conflict. Music and the Sacred addresses how music is used in religious practices throughout the world: chanting sacred texts and singing devotional verses, inspiring religious experience such as ecstasy and trance, and marking and shaping ritual space and time. Music and Social Life analyzes the uses of music in storytelling, theater, and film. It delves into the contributions of sound technologies, while looking at the many ways music enhances nightlife, public ceremonies, and festivals.
