Life in a Shell Donald C. Jackson,2011-02-04 Trundling along in essentially the same form for some 220 million years, turtles have seen dinosaurs come and go, mammals emerge, and humankind expand its dominion. Is it any wonder the persistent reptile bested the hare? In this engaging book physiologist Donald Jackson shares a lifetime of observation of this curious creature, allowing us a look under the shell of an animal at once so familiar and so strange. Here we discover how the turtle's proverbial slowness helps it survive a long, cold winter under ice. How the shell not only serves as a protective home but also influences such essential functions as buoyancy control, breathing, and surviving remarkably long periods without oxygen, and how many other physiological features help define this unique animal. Jackson offers insight into what exactly it's like to live inside a shell—to carry the heavy carapace on land and in water, to breathe without an expandable ribcage, to have sex with all that body armor intervening. Along the way we also learn something about the process of scientific discovery—how the answer to one question leads to new questions, how a chance observation can change the direction of study, and above all how new research always builds on the previous work of others. A clear and informative exposition of physiological concepts using the turtle as a model organism, the book is as interesting for what it tells us about scientific investigation as it is for its deep and detailed understanding of how the enduring turtle “works.”

Turtle Louise M. Pryke,2020-11-12 As ancient creatures that once shared the Earth with dinosaurs, turtles have played a crucial role in maintaining healthy terrestrial and marine ecosystems for more than one hundred million years. While it may not set records for speed on land, the turtle is exceptional at distance swimming and deep diving, and some are gifted with astounding longevity. In human thought, the animal's ties to creativity, wisdom, and warfare stretch back to the world's earliest written records. In *Turtle*, Louise M. Pryke celebrates the slow and unassuming manner of this doughty creature, which provides a living model of endurance and efficiency. In the increasingly fast-paced world of the twenty-first century, it has never been more important to consider the natural and cultural history of this remarkable animal.

The Art of Eric Carle Eric Carle,2021-03-09 Carle is one of the most beloved illustrators of children's books. This retrospective is more than just an appreciation of his art, however. The book also contains an insightful autobiography illustrated with personal photographs, an anecdotal essay by his longtime editor, a photographic essay on how Carle creates his collages, and writings by Carle and his colleagues. Still, it is the artwork in the oversize volume that seizes the imagination. More than 60 of his full-color collage pictures are handsomely reproduced and serve as a statement of Carle's impressive talent. - Booklist

Ying and the Magic Turtle Sue Looney,2019-11-25 A story book for all ages to experience mathematics, problems solving, and the rewards that come with perseverance.Long ago in the land of China, there were many rain storms ... and the land of China was slowly sinking into the sea. This is the story of how a wise emperor, an observant girl, and a magic turtle saved the villages of China from the great flood. So begins the story of Ying and the Magic Turtle. Children ages 5 and up, parents, and teachers can enjoy the book for its rich beauty in mathematics and as an ancient legend. It is the kind of story to revisit over and over again.This book is perhaps best experienced with someone, as a read-aloud or read-together. When reading, we learn of Ying's trouble, and we root for her to find her solution. We find ourselves drawn into the life problems that Ying is facing, but also drawn into the inherent mathematics of the story. It is through the beauty of the pattern of the dots on the turtle's shell that the solution is finally found and the land is saved.We can appreciate each scene as we read, and then pause and predict what might come next. We can play with the mathematics, solving right alongside Ying. We can delve deeper into the power of magic squares by working with puzzles presented at the end of the story. There are unsolved problems in number theory even a young child can try, such as finding all the possible magic squares of a given size.

Fishing for Human Perceptions in Coastal and Island Marine Resource Use Systems, 2nd Edition Annette Breckwoldt,Wen-Cheng Wang,Hans von Storch,Beate M. W. Ratter,2019-06-07 Human perceptions, decision-making and (pro-) environmental behaviour are closely connected. This Research Topic focuses on bringing together perceptions and behaviour for sustainable coastal and island marine resource use systems. Management and governance of (large and small-scale) coastal marine resource use systems function in highly complex social and ecological environments, which are culturally embedded, economically interest-led and politically biased. Management processes therefore have to integrate multiple perspectives as well as perception-driven standpoints on the individual as well as the decision-makers’ levels. Consequently, the analysis of perceptions has developed not only as part of philosophy and psychology but also of environmental science, anthropology and human geography. It encompasses intuitions, values, attitudes, thoughts, mind-sets, place attachments and sense of place. All of these influence human behavior and action, and are collected or are available within the respective marine resource use system, which may support the livelihood of a large part of the local population. Management and governance are not only about mediating between resource use conflicts or establishing marine protected areas, they deal with people and their ideas and perceptions. Understanding the related decision-making processes on multiple scales and levels hence means much more than economically assessing the available marine resources or existing threats to the associated system. Over the past decade, there has been a growing inter- and transdisciplinary international community becoming interested in research which integrates perceptions of coastal and inland residents, local and regional stakeholder groups, as well as resource and environmental managers and decision-makers. By acknowledging the importance of the individual perspective and interest-led personal views, it became obvious how valuable and important these sources of information are for coastal research. An increase of research effort spent on the link between perceptions and behaviour in marine resource use systems is thus both timely and needed. By offering a diversity of inspiring and comprehensive contributions on the link between perceptions and behaviour, this Research Topic aspires to critically enlighten the discourse and applicability of such research for finding sustainable, locally identified, anchored and integrated marine resource use pathways.
