Visual Information Systems Clement Leung,1997-09-29 This book is a thoroughly arranged anthology outlining the state of the art in the emerging area of visual informationsystems. The chapters presented are a selection of thoroughly refereed and revised full papers first presented at the First International Conference on visual Information Systems held in February 1996. Next generation information systems have a high visual content, and there will be a shift in emphasis from a paradigm of predominantly alphanumeric data processing to one of visual information processing. The book provides a detailed introductory chapter, two keynotes by leading authorities, sections on design and architecture, database management and modelling, contend-based search and retrieval, feature extraction and indexing, query model and interface, and object recognition and content organization.

Foundations of Modern Analysis J. Dieudonne,2013-04-16 Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Nuclear Physics Ali A. Abdulla,2015-10-16 This book is based on a nuclear physics course the author has taught to graduate students at the Physics Department, College of Science, University of Baghdad, Iraq, for the period 1978–2007. Also, it is based on the author's experiences in the field of nuclear physics, teaching, researching, and administration of certain scientific institutions and organizations. It consists of nine chapters and an appendix of some solved problems to illustrate the subject to the students. As a textbook in nuclear physics, it actually deals with the physics of the

nucleus of the atom, from the time of discovering the nucleus by the alpha particle (α) scattering by gold film experiment by Rutherford (1911). Therefore, it describes and demonstrates the following important subjects: —Nuclear radius and shapes, properties —The nuclear force, properties, and features —Proposed nuclear models —Nuclear potential, different suggested types —Nuclear constituents, the protons (p) and the neutrons (N) —The nucleon as identity to p and N according to the charge and energy state —The angular momentum of the nucleus and its quadruple moment —The nuclear interactions —The rotation properties of the nucleus —The electromagnetic properties of the nucleus —Transitions, properties, and Fermi golden rules —Beta decay and the nonconservation of parity and the CPT conservation, the helicity —Nuclear particles physics —Solved problems

Kalman Filtering Mohinder S. Grewal, Angus P. Andrews, 2011-09-20 This book provides readers with a solid introduction to the theoretical and practical aspects of Kalman filtering. It has been updated with the latest developments in the implementation and application of Kalman filtering, including adaptations for nonlinear filtering, more robust smoothing methods, and developing applications in navigation. All software is provided in MATLAB, giving readers the opportunity to discover how the Kalman filter works in action and to consider the practical arithmetic needed to preserve the accuracy of results. Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department -- to obtain the manual, send an email to ialine@wiley.com.

Dropping the Atomic Bomb on Hirohito & Hitler Jim Mangi, 2022-02-24 On 2 August 1939, the renowned theoretical physicist Albert Einstein wrote a letter to President Roosevelt in which he declared that 'it might become possible to set up a nuclear chain reaction in a large mass of uranium'. He went on to declare that 'extremely powerful bombs of a new type may thus be constructed'. Shortly after Japan's attack on Pearl Harbor, Congress allocated substantial funds to allow research to be undertaken to follow through on Einstein's idea and build an atomic bomb. Few, if any, could have imagined what they had agreed to support. But what if actual events had taken a different course? *The First Atomic Bomb: An Alternate History to the Ending of WW2* is a highly accurate, thoroughly researched, alternative history presenting a narrative of events exploring what might have happened if the atom bomb had been available somewhat earlier than it really was. What if the atomic bomb had been ready for deployment in, say, February 1945? Had the atomic bomb been ready sooner, how would this have affected the war in Europe, and in particular Germany's surrender? What would the impact have been in the war in the Pacific against Imperial Japan, and how would the Soviets have reacted? And what would the following Cold War have looked like? These are all questions and scenarios that the author rigorously examines. Solidly based on real people and actual events, in this book James Mangi describes the Manhattan Project to build the atom bomb getting an earlier start after President Roosevelt appointed an energetic scientist, Walter Mendenhall, to study the feasibility of the bomb, instead of the more traditional bureaucrat, Lyman Briggs, he actually chose. This scenario, he reveals, might well have produced a war-ending atomic bomb earlier, the effects of which rippled through the post-war world.

American-Type Options Dmitrii S. Silvestrov, 2015-03-03 The book gives a systematical presentation of stochastic approximation methods for discrete time Markov price processes. Advanced methods combining backward recurrence algorithms for computing of option rewards and general results on convergence of stochastic space skeleton and tree approximations for option rewards are applied to a variety of models of multivariate modulated Markov price processes. The principal novelty of presented results is based on consideration of multivariate modulated Markov price processes and general pay-off functions, which can depend not only on price but also an additional stochastic modulating index component, and use of minimal conditions of smoothness for transition probabilities and pay-off functions, compactness conditions for log-price processes and rate of growth conditions for pay-off functions. The volume presents results on structural studies of optimal stopping domains, Monte Carlo based approximation reward algorithms, and convergence of

American-type options for autoregressive and continuous time models, as well as results of the corresponding experimental studies.

Model of the Universe Bobby McGehee,2010-02 This Model of the Universe concludes the universe to be a spherical region within a much larger region of primordial matter. Primordial Matter is determined to be an endless array of positroniums; matter (+) and antimatter (-) particles, stabilized in and by an equally spaced (.6 cm) hexahedron arrangement. When positron + and electron - particles come in contact they annihilate into photons; when photon concentrations become adequate, they precipitate into corporeal matter of the universe. The initial annihilation started a chain reaction from a single + & - pair which upset the positronium rotation synchronization. Photons from annihilations propagate in all directions and produce more continuing chain reaction annihilations. Outward flowing photon concentrations coalesce and precipitate into subatomic particles. Accretions of particles produce the objects and matter of the universe. The continuing process is called the deflagration wave, because a simple understandable analogy relates to a flame propagating through dry grass: matter is not created nor destroyed; it is only converted from one form of matter into another. All processes in this Model have been proven, and verified; all are consistent with the Laws of Physics.

Linear and Complex Analysis Problem Book 3 Victor P. Havin,Nikolai K. Nikolski,2006-12-08 The 2-volume book is an updated, reorganized and considerably enlarged version of the previous edition of the Research Problem Book in Analysis (LNM 1043), a collection familiar to many analysts, that has sparked off much research. This new edition, created in a joint effort by a large team of analysts, is, like its predecessor, a collection of unsolved problems of modern analysis designed as informally written mini-articles, each containing not only a statement of a problem but also historical and methodological comments, motivation, conjectures and discussion of possible connections, of plausible approaches as well as a list of references. There are now 342 of these mini- articles, almost twice as many as in the previous edition, despite the fact that a good deal of them have been solved!

Logic Without Borders Åsa Hirvonen,Juha Kontinen,Roman Kossak,Andrés Villaveces,2015-03-10 In recent years, mathematical logic has developed in many directions, the initial unity of its subject matter giving way to a myriad of seemingly unrelated areas. The articles collected here, which range from historical scholarship to recent research in geometric model theory, squarely address this development. These articles also connect to the diverse work of Väänänen, whose ecumenical approach to logic reflects the unity of the discipline.

American National Guard Cristina Berna,Eric Thomsen,2023-08-16 The first muster of militia forces in what is today the United States took place on September 16, 1565, in the newly established

Advances in Visual Computing Richard Boyle,Bahram Parvin,Darko Koracin,Ronald Chung,Hammoud,Muhammad Hussain,Kar-Han Tan,Roger Crawfis,Daniel Thalmann,David Kao,Lisa Avila,2010-11-19 It is with great pleasure that we present the proceedings of the 6th International Symposium on Visual Computing (ISVC 2010), which was held in Las Vegas, Nevada. ISVC provides a common umbrella for the four main areas of visual computing including vision, graphics, visualization, and virtual reality. The goal is to provide a forum for researchers, scientists, engineers, and practitioners throughout the world to present their latest research findings, ideas, developments, and applications in the broader area of visual computing. This year, the program consisted of 14 oral sessions, one poster session, 7 special tracks, and 6 keynote presentations. The response to the call for papers was very good; we received over 300 submissions for the main symposium from which we accepted 93 papers for oral presentation and 73 papers for poster presentation. Special track papers were solicited separately through the Organizing and Program Committees of each track. A total of 44 papers were accepted for oral presentation and 6 papers for poster presentation in the special tracks.
