The Germ Theory of Disease Kristin Thiel, 2017-07-15 From ancient times until the early nineteenth century, many medical practitioners believed that the body contained four humors: blood, yellow bile, black bile, and phlegm. Humoral doctrine stated that balancing these humors was the key to health. Then in the mid-1800s, Louis Pasteur, Joseph Lister, and Robert Koch shattered these misconceptions and established our modern understanding of germs. These scientists were pioneers, and their legacy is medical practice rooted in scientific evidence. This book looks at how Pasteur's contributions were based upon innovations like the microscope, how Lister's and Koch's theories built upon Pasteur's discoveries, and how germ theory continues to evolve today in the era of superbugs.

Visual Informatics: Bridging Research and Practice Halimah Badioze Zaman, Peter Robinson, Maria Petrou, Patrick Olivier, Heiko Schröder, 2009-11-14 Visual informatics is a field of interest not just among the information technology and computer science community, but also other related fields such as engineering, medical and health informatics and education starting in the early 1990s. Recently, the field is gaining more attention from researchers and industry. It has become a multi-disciplinary and trans-disciplinary field related to research areas such as computer vision, visualization, information visualization, real-time image processing, medical image processing, image information retrieval, virtual reality, augmented reality, expressive visual mathematics, 3D graphics, multimedia-fusion, visual data mining, visual ontology, as well as services and visual culture. Various efforts have been invested in different research, but operationally, many of these systems are not prominent in the mass market and thus knowledge and research on these phenomena within the mentioned areas need to be shared and disseminated. It is for this reason that the Visual Informatics Research Group from Universiti Kebangsaan Malaysia (UKM) decided to spearhead this initiative to bring together experts in this very diversified but important research area so that more concerted efforts can be undertaken not just within the visual informatics community in Malaysia but from other parts of the world, namely, Asia, Europe, Oceania, and USA. This first International

Visual Informatics Conference (IVIC 2009) was conducted collaboratively, by the visual informatics research community from the various public and private institutions of higher learning in Malaysia, and hosted by UKM.

Origins of Pictures Klaus Sachs-Hombach, Jörg R. J. Schirra, 2014-10-29 Anyone talking about pictures by necessity refers to those using pictures. It is therefore essentially the competence of using pictures that has to be considered. Such competence is not common among higher developed mammals, at least as far as we know today. This fact raises the question whether and to what extent that ability has to be conceived as a strictly anthropological one. In an interdisciplinary approach, the first international conference of the Society for Interdisciplinary Image Science (GiB) titled ›Origins of Pictures‹ has taken a closer look at the role of pictures for the conditio humana. The primary goal of the conference was to present empirical findings of the origins of picture uses, considering in particular research in paleo-anthropology, archeology, cultural anthropology, and developmental psychology. Furthermore, those findings were to be related to philosophical considerations concerning the conditions of the conceptual formation of picture competence.

Creating and Contesting Carolina Michelle LeMaster, Bradford J. Wood, 2013-11-01 The essays in *Creating and Contesting Carolina* shed new light on how the various peoples of the Carolinas responded to the tumultuous changes shaping the geographic space that the British called Carolina during the Proprietary period (1663–1719). In doing so, the essays focus attention on some of the most important and dramatic watersheds in the history of British colonization in the New World. These years brought challenging and dramatic changes to the region, such as the violent warfare between British and Native Americans or British and Spanish, the no-less dramatic development of the plantation system, and the decline of proprietary authority. All involved contestation, whether through violence or debate. The very idea of a place called Carolina was challenged by Native Americans, and many colonists and metropolitan authorities differed in their visions for Carolina. The stakes were high in these contests because they occurred in an early American world often characterized by brutal warfare, rigid hierarchies, enslavement, cultural dislocation, and transoceanic struggles for power. While Native Americans and colonists shed each other's blood to define the territory on their terms, colonists and officials built their own version of Carolina on paper and in the discourse of early modern empires. But new tensions also provided a powerful incentive for political and economic creativity. The peoples of the early Carolinas reimagined places, reconceptualized cultures, realigned their loyalties, and adapted in a wide variety of ways to the New World. Three major groups of peoples—European colonists, Native Americans, and enslaved Africans—shared these experiences of change in the Carolinas, but their histories have usually been written separately. These disparate but closely related strands of scholarship must be connected to make the early Carolinas intelligible. *Creating and Contesting*

Carolina brings together work relating to all three groups in this unique collection.

Millennial Cervantes Bruce R. Burningham,2020-06-01 Millennial Cervantes explores some of the most important recent trends in Cervantes scholarship in the twenty-first century. It brings together leading Cervantes scholars of the United States in order to showcase their cutting-edge work within a cultural studies frame that encompasses everything from ekphrasis to philosophy, from sexuality to Cold War political satire, and from the culinary arts to the digital humanities. Millennial Cervantes is divided into three sets of essays--conceptually organized around thematic and methodological lines that move outward in a series of concentric circles. The first group, focused on the concept of Cervantes in his original contexts, features essays that bring new insights to these texts within the primary context of early modern Iberian culture. The second group, focused on the concept of Cervantes in comparative contexts, features essays that examine Cervantes's works in conjunction with those of the English-speaking world, both seventeenth- and twentieth-century. The third group, focused on the concept of Cervantes in wider cultural contexts, examines Cervantes's works--principally Don Quixote--as points of departure for other cultural products and wider intellectual debates. This collection articulates the state of Cervantes studies in the first two decades of the new millennium as we move further into a century that promises both unimagined technological advances and the concomitant cultural changes that will naturally adhere to this new technology, whatever it may be.

Canada's Mechanized Infantry Peter Kasurak, 2020-02-01 Canada's Mechanized Infantry explores the development of the Canadian Army's infantry after the First World War. Modern studies of technology and war have tended to focus on tanks and armour, but soldiers discovered that military success really depends on the combination of infantry, armour, and artillery. Peter Kasurak demonstrates how the Canadian army implemented successful infantry vehicles and doctrine to further its military goals during the Second World War until organizational constraints took hold in the postwar period. This book reveals the challenges of transforming the infantry into a twenty-first-century combat force by integrating soldiers, vehicles, weapons, and electronics.

Markets and Exchanges in Pre-Modern and Traditional Societies Juan Carlos Moreno Garcia, 2021-06-30 Markets emerge in recent historical research as important spheres of economic interaction in ancient societies. In the case of ancient Egypt, traditional models imagined an all-encompassing centralized, bureaucratic economy that left practically no place for market transactions, as many surviving documents only described the activities of the royal palace and of huge institutions, mainly temples. Yet scattered references in the sources reveal that markets and traders were crucial actors in the economic life of ancient Egypt. In this perspective, this volume aims to discuss the role of markets, traders and economic interaction (not necessarily organized through markets) and the use of “money” (metals, valuable commodities) in pre-modern societies, based on archaeological, anthropological, and historical evidence. Furthermore, it intends to integrate different perspectives about the social organization of transactions and exchanges and the different forms taken by markets, from meeting places where exchanges operated under ritualized procedures and conventions, to markets in which profit-seeking activities were marginal in respect with other practices that stressed, on the contrary, community collaboration. The book also deals with social forms of pre-modern exchanges in which trust and ethnic solidarity guaranteed the validity of commercial operations in the absence of formal codes of laws or accepted authorities over long distances (trade diasporas, guilds, etc.). Finally, the volume analyzes a critical aspect of small-scale trade and markets, such as the commercialization of agricultural household production and its impact on the peasant economic strategies. In all, the book covers a diversity of topics in which recent research in the fields of economic sociology, archaeology, anthropology, economics, and history proves invaluable in order to analyze the role of Egyptian trade in a broader perspective, as well as to suggest new venues of comparative research, theoretical reflection, and dialogue between Egyptology and social sciences.

Witchcraft Marion Gibson, 2024-01-16 A fascinating, vivid global history of witch trials across Europe, Africa, and the Americas, told through thirteen distinct trials that illuminate the pattern of demonization and conspiratorial thinking that has profoundly shaped human history. Witchcraft is a dramatic journey through thirteen witch trials across history, some famous—like the Salem witch trials—and some lesser-known: on Vardø island, Norway, in the 1620s, where an indigenous Sami woman was accused of murder; in France in 1731, during the country’s last witch trial, where a young woman was pitted against her confessor and cult leader; in Pennsylvania in 1929 where a magical healer was labelled a “witch”; in Lesotho in 1948, where British colonial authorities executed local leaders. Exploring how witchcraft became feared, decriminalized, reimagined, and eventually reframed as gendered persecution, Witchcraft takes on the intersections between gender and power, indigenous spirituality and colonial rule, and political conspiracy and individual resistance. Offering a vivid, compelling,

and dramatic story, unspooling through centuries, about the men and women who were accused—some of whom survived their trials, and some who did not—Witchcraft empowers the people who were and are victimized and marginalized, giving a voice to those who were silenced by history.
