Mapping Spaces Ulrike Gehring,Peter Weibel,2014 The ZKM throws new light on 17th century landscape painting. Comparable to modern satellite surveying (GPS), true to scale landscape representation is also indebted to the interdisciplinary exchange of knowledge: the alliance of geodesists, mathematicians, instrument makers and painters. Artists had designed modern surveying systems long before new media drew on images from outer space. The exhibition Mapping Spaces examines, for the first time ever on this scale, the influence of early modern guide books in geography, the science of surveying and the construction of fortification on Dutch painting around 1650. The prelude to the project, developed at the University of Trier, is Pieter Snayers' large-format depiction of historical battle scenes, in which maps and landscape paintings are projected over one another so as to document the most recent developments in modern engineering, ballistics and the fortification construction. Over 220 exhibits, among them paintings, surveying instruments, graphics devices, books, maps and globes drawn from the most important collections of works, such as from the Prado (Madrid), the Louvre (Paris), the Rijksmuseum (Amsterdam) or the Kunsthistorischen Museum (Vienna) testify to these new theses in pictorial science. The new mapping of an early modern area of knowledge is accompanied by contemporary works of art that thematize the influence of technological developments on our present-day perception of space.--Museum website.

A Quantum City Ludger Hovestadt,Vera Bühlmann,2015-06-16 We know the specific strengths of various cities, are aware of their ranking, are able to discuss their density and growth. But what do all cities have in common, what do we know about the "lowest common denominator"? The "city as a species", the "primal genetic material of the city": this is the subject of A Quantum City. This colossal work is a love letter to the city and intellectual culture. We follow the fictional narrative figure, Orlando, beginning in 320 BC, on his odyssey through the Western world up to the present time. The book is divided into four interrelated chapters and can be read page by page in a discursive manner, however

randomly browsing through the book also offers new and multi-faceted interpretations. Great intellectual achievements are compared with obscure and mundane events. A Quantum City offers an inspiring view of the city that is in us and around us.

Handbook of Gender Research in Psychology Joan C. Chrisler,Donald R. McCreary,2010-03-12 Donald R. McCreary and Joan C. Chrisler The Development of Gender Studies in Psychology Studies of sex differences are as old as the ?eld of psychology, and they have been conducted in every sub?eld of the discipline. There are probably many reasons for the popularity of these studies, but three reasons seem to be most prominent. First, social psychological studies of person perception show that sex is especially salient in social groups. It is the ?rst thing people notice about others, and it is one of the things we remember best (Fiske, Haslam, & Fiske, 1991; Stangor, Lynch, Duan, & Glass, 1992). For example, people may not remember who uttered a witty remark, but they are likely to remember whether the quip came from a woman or a man. Second, many people hold ?rm beliefs that aspects of physiology suit men and women for particular social roles. Men's greater upper body strength makes them better candidates for manual labor, and their greater height gives the impression that they would make good leaders (i. e. , people we look up to). Women's reproductive capacity and the caretaking tasks (e. g. , breastfeeding, baby minding) that accompany it make them seem suitable for other roles that require gentleness and nurturance. Third, the logic that underlies hypothesis testing in the sciences is focused on difference. Researchers design their studies with the hope that they can reject the null hypothesis that experimental groups do not differ.
