Bringing Fusion to the U.S. Grid National Academies of Sciences Engineering and Medicine, National Academy of Engineering, Division on Earth and Life Studies, Division on Engineering and Physical Sciences, Nuclear and Radiation Studies Board, Board on Energy and Environmental Systems, Board on Physics and Astronomy, Committee on the Key Goals and Innovation Needed for a U S Fusion Pilot Plant, 2021-11-17 Fusion energy offers the prospect of addressing the nation's energy needs and contributing to the transition to a low-carbon emission electrical generation infrastructure. Technology and research results from U.S. investments in the major fusion burning plasma experiment known as ITER, coupled with a strong foundation of research funded by the Department of Energy (DOE), position the United States to begin planning for its first fusion pilot plant. Strong interest from the private sector is an additional motivating factor, as the process of decarbonizing and modernizing the nation's electric infrastructure accelerates and companies seek to lead the way. At the request of DOE, Bringing Fusion to the U.S. Grid builds upon the work of the 2019 report Final Report of the Committee on a Strategic Plan for U.S. Burning Plasma Research to identify the key goals and innovations - independent of confinement concept - that are needed to support the development of a U.S. fusion pilot plant that can serve as a model for producing electricity at the lowest possible capital cost.

**Ecology of Cyanobacteria II** Brian A. Whitton, 2012-07-05 Cyanobacteria have existed for 3.5 billion years, yet they are still the most important photosynthetic organisms on the planet for cycling carbon and nitrogen. The ecosystems where they have key roles range from the warmer oceans to many Antarctic sites. They also include dense nuisance growths in nutrient-rich lakes and nitrogen-fixers which aid the fertility of rice-fields and many soils, especially the biological soil crusts of arid regions. Molecular biology has in recent years provided major advances in our understanding of cyanobacterial ecology. Perhaps for more than any other group of organisms, it is possible to see how the ecology, physiology, biochemistry, ultrastructure and molecular biology interact. This all helps to deal with practical problems such as the control of nuisance blooms and the use of cyanobacterial inocula to manage semi-desert soils. Large-scale culture of several organisms, especially *Spirulina* (*Arthrospira*), for health food and specialist products is increasingly being expanded for a much wider range of uses. In view of their probable contribution to past oil deposits, much attention is currently focused on their potential as a source of biofuel. Please visit <http://extras.springer.com/> to view Extra Materials belonging to this volume. This book complements the highly successful *Ecology of Cyanobacteria* and integrates the discoveries of the past twelve years with the older literature.

**Behind Boardroom Doors** Betsy Atkins, 2013-06 Betsy Atkins, former CEO and experienced corporate director has candid and

very practical advice for those who serve on the boards of big, complex enterprises. This collection of her writing on boards includes the now-legendary My 16 Days on the HealthSouth Board, with the details of her brief, turbulent stint as a director of a company facing (but not facing up to) massive criminal fraud charges. She discusses problems from an executive trying to bribe a world leader to a marketing VP's porn site, traditional concerns of strategy, CEO compensation and succession, shareholder lawsuits, and up-to-the-minute issues of ESG and social media.

Final Report of the Committee on a Strategic Plan for U.S. Burning Plasma Research National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee on a Strategic Plan for U.S. Burning Plasma Research, 2019-07-01 Fusion offers the prospect of virtually unlimited energy. The United States and many nations around the world have made enormous progress toward achieving fusion energy. With ITER scheduled to go online within a decade and demonstrate controlled fusion ten years later, now is the right time for the United States to develop plans to benefit from its investment in burning plasma research and take steps to develop fusion electricity for the nation's future energy needs. At the request of the Department of Energy, the National Academies of Sciences, Engineering, and Medicine organized a committee to develop a strategic plan for U.S. fusion research. The final report's two main recommendations are: (1) The United States should remain an ITER partner as the most cost-effective way to gain experience with a burning plasma at the scale of a power plant. (2) The United States should start a national program of accompanying research and technology leading to the construction of a compact pilot plant that produces electricity from fusion at the lowest possible capital cost.

*Macrocosm and Microcosm* Rudolf Steiner, 1986-09 The human life alternates between the great, external macrocosm and the invisible inner microcosm. Steiner discusses the various paths of self-development that lead across these two thresholds and to the transformation of human soul-forces into spiritual organs of perception. A brief synopsis: The world behind the tapestry of sensory perceptions; human life between macrocosm and microcosm. The planets and their connection with our sleeping and waking life; consciousness soul, mind soul, and sentient soul. The inner path of the mystic; the cycle of the year; the ability to see through matter; the greater guardian of the threshold. The nature and development of human soul faculties; the lesser guardian of the threshold; the sun at midnight; the results of sins of omission. The Egyptian mysteries of Osiris and Isis; initiation experiences; the Rosicrucian path; mystics of the Middle Ages. Initiation in the northern mysteries; the necessity of suppressing the ego; conscious assent into the macrocosm and the higher worlds; the world of archetypal images. The four spheres of the higher worlds; the threshold of the spirit world; forces for developing clairvoyant consciousness in the world of archetypal images. The macrocosm mirrored in the human being; the nervous system as an inner solar system; the image of purified blood and the conquest of our lower nature in the symbol of the Rose Cross. Spiritual organs of perception and the strengthening powers of sleep; the thinking of the heart; the ego viewed from twelve perspectives. Reading the akashic record; the transition from intellect to heart thinking; four-dimensional space; intellectual questions have no meaning in relation to conditions before the intellect itself existed. Human and planetary evolution; adaptation to the different states of Earth's existence; the breathing process should not be influenced directly unless knowledge has become prayer.

**Plasma Science** National Academies of Sciences Engineering and Medicine, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee on a Decadal Assessment of Plasma Science, 2021-02-28 Plasma Science and Engineering transforms fundamental scientific research into powerful societal applications, from materials processing and healthcare to

forecasting space weather. Plasma Science: Enabling Technology, Sustainability, Security and Exploration discusses the importance of plasma research, identifies important grand challenges for the next decade, and makes recommendations on funding and workforce. This publication will help federal agencies, policymakers, and academic leadership understand the importance of plasma research and make informed decisions about plasma science funding, workforce, and research directions.

**The Army's Nuclear Power Program** Lawrence H. Suid,1990-08-21 On August 6 and August 9, 1945, the world became aware of the destructiveness of nuclear energy when the U.S. Army Air Corps dropped atomic bombs on Hiroshima and Nagasaki. Even before the bombs were detonated, though, President Harry Truman had directed his thoughts toward non-military uses of the atom, recognizing that the atomic bomb had given man a new understanding of the forces of nature. This book examines the history and development of nuclear power from the perspective of the U.S. Army's nuclear power program, telling its story from the creation of the Office of Research and Development through the program's days of growth, and on to its eventual decline. This history examines the development of the United States Army's nuclear power program from its inception, through the development and operation of six small nuclear power plants throughout the Western Hemisphere, to its evolution into a military support agency. The Manhattan Project District Engineer, General Kenneth Nichols, who generated the idea for the program, worked for the development of atomic energy for peaceful purposes. From the initial plans to develop nuclear power plants at remote bases, the book traces the path the Army took in getting its proposals approved by the Atomic Energy Commission, formally organizing the nuclear program, and building a prototype of a nuclear power plant. Separate chapters are devoted to Fort Greely, the nuclear program at the height of its success and accomplishment, and its subsequent decline and transitional period. With its list of suggestions for further reading and a comprehensive index, this volume will be a valuable resource for courses in military history, energy issues, and the development of atomic power. It will also represent an important addition to college, university, and public libraries.

**Other Transaction Authority: Understanding and Examining Its Uses by Federal Agencies** Tara M. Morrison, 2010 An other transaction (OT) is a special vehicle used by federal agencies for obtaining or advancing research and development (R&D) or prototypes. An OT is not a contract, grant or co-operative agreement, and there is no statutory or regulatory definition of other transaction. Only those agencies that have been provided OT authority may engage in other transaction. Generally, the reason for OT authority is that the government needs to obtain leading edge R&D and prototypes from commercial sources, but some companies are unwilling or unable to comply with the government's procurement regulations. This book examines the other transaction authority and its uses by the federal agencies.
