Intelligent Agents and Multi-Agent Systems Jaeho Lee,Mike Barley,2003-10-24 Five years ago, with excitement and uncertainty, we witnessed the birth of PRIMA (Paci?c Rim International Workshop on Multi-Agents). The ?rst PRIMA in 1998 has now grown into PRIMA 2003, the 6th Paci?c Rim Inter- tional Workshop on Multi-Agents in Seoul, Korea. During a period of ?ve years, the notion of agent research has grown so much that we hear the term agent on a daily basis. Various ?elds such as business, the Web, software engineering, on-line games and such are now using the term agent as a placeholder, just like the term object is used in the object-oriented paradigm. On the other hand, the research area has extended toward real applications, such as the Semantic Web and ubiquitous computing. The themes of PRIMA 2003 re?ected the following trends: – agent-based electronic commerce, auctions and markets – agent architectures and their applications – agent communication languages, dialog and interaction protocols – agent ontologies – agent programming languages, frameworks and toolkits – agentcities – agents and grid computing – agents and peer computing –agentsandtheSemanticWeb – agents and Web services – arti?cial social systems – con?ict resolution and negotiation – evaluation of multi-agent systems – languages and techniques for describing (multi-)agent systems – meta modeling and meta reasoning – multi-agent planning and learning – multi-agent systems and their applications – social reasoning, agent modeling, and organization – standards for agents and multi-agent systems – teams and coalitions – ubiquitous agents

Linear Algebra Done Right Sheldon Axler,2023-10-28 Now available in Open Access, this best-selling textbook for a second course in linear algebra is aimed at undergraduate math majors and graduate students. The fourth edition gives an expanded treatment of the singular value decomposition and its consequences. It includes a new chapter on multilinear algebra, treating bilinear forms, quadratic forms, tensor products, and an approach to determinants via alternating multilinear forms. This new edition also increases the use of the minimal polynomial to provide cleaner proofs of multiple results. Also, over 250 new exercises have been added. The novel approach taken here banishes determinants to the end of the book. The text focuses on the central goal of linear algebra: understanding the structure of linear operators on finite-dimensional vector spaces. The author has taken unusual care to motivate concepts and simplify proofs. A variety of interesting exercises in each chapter helps students understand and manipulate the objects of linear algebra. Beautiful formatting creates pages with an unusually student-friendly appearance in both print and electronic versions. No prerequisites are assumed other than the usual demand for suitable mathematical maturity. The text starts by discussing vector spaces, linear independence, span, basis, and dimension. The book then deals with linear maps, eigenvalues, and eigenvectors. Inner-product spaces are introduced, leading to the finite-dimensional spectral theorem and its consequences. Generalized eigenvectors are then used to provide insight into the structure of a linear operator. From the reviews of previous editions: Altogether, the text is a didactic masterpiece. — zbMATH The determinant-free proofs are elegant and intuitive. — American Mathematical Monthly The most original linear algebra book to appear in years, it certainly belongs in every undergraduate library — CHOICE

HEAR HEAR! John Gouriet,2010-04 HEAR HEAR is a collection of over 700 letters and articles written by the author to the British Press over the last 11 years of the Blair/Brown governments. John Gouriet has been close to the hub of British politics for 35 years and helped Margaret Thatcher win her first election victory in 1979. Since then Mr. Gouriet has made many accurate predictions, in some cases years in advance of events. He is considered by the Sunday Telegraph to be one of their best letter writers. Hear Hear is written with humour and impeccable logic about politics in Britain and abroad, especially relations with the EU and the US and the two wars. It also contains over 60 very funny and penetrating cartoons by Garland, who was cartoonist of the year in 2008, and a Foreword by Lord Tebbit, one of Lady Thatcher's leading ministers. It is a devastating critique of the actions of many who presume to govern Britain, whether by election or appointment, of all parties. Mr. Gouriet describes how public apathy, avarice and ignorance have been shamelessly exploited in pursuit of political ambition and the establishment of a socialist state answerable not to the Crown or the people but a corrupt alien power known as Euroland. In his view, unless and until the British people re-assert their rights, liberties and rule of law in accordance with the British Constitution they will remain doomed to servitude until the Euro-edifice itself collapses, which the author believes is inevitable. Until then they will have to endure the same furnace that Solzenitsyn predicted. This is the sorry conclusion drawn from one man's daily vigil. This explosive book does not make comfortable reading for those who have failed Britain, but it should prove inspirational for those determined to restore Britain's freedom and fortune.
