The Essentials of Technical Communication Elizabeth Tebeaux,Sam Dragga,2020-11-04 In today's complex workplace, no one wants to read what you write. The Essentials of Technical Communication, Fifth Edition, was developed with this principle in mind. The respected author team continues to provide students with accessible and comprehensive instructions for planning, drafting, and revising technical documents that are clear and concise. Divided into two flexible parts--Principles and Applications--the text lays a strong foundation in the rhetoric principles before examining the principle types of workplace documents with checklists for use in preparing them.

Biomass Conversion Chinnappan Baskar,Shikha Baskar,Ranjit S. Dhillon,2012-05-08 The consumption of petroleum has surged during the 20th century, at least partially because of the rise of the automobile industry. Today, fossil fuels such as coal, oil, and natural gas provide more than three quarters of the world's energy. Unfortunately, the growing demand for fossil fuel resources comes at a time of diminishing reserves of these nonrenewable resources. The worldwide reserves of oil are sufficient to supply energy and chemicals for only about another 40 years, causing widening concerns about rising oil prices. The use of biomass to produce energy is only one form of renewable energy that can be utilized to reduce the impact of energy production and use on the global environment. Biomass can be converted into three main products such as energy, biofuels and fine chemicals using a number of different processes. Today, it is a great challenge for researchers to find new environmentally benign methodology for biomass conversion, which are industrially profitable as well. This book focuses on the conversion of biomass to biofuels, bioenergy and fine chemicals with the interface of biotechnology, microbiology, chemistry and materials science. An international scientific authorship summarizes the state-of-the-art of the current research and gives an outlook on future developments.

Prospects of Renewable Bioprocessing in Future Energy Systems Ali Asghar Rastegari,Ajar Nath Yadav,Arti Gupta,2019-04-03 This book discusses various renewable energy resources and technologies. Topics covered include recent advances in photobioreactor design; microalgal biomass harvesting, drying, and processing; and technological advances and optimised production systems as prerequisites for achieving a positive energy balance. It highlights alternative resources that can be used to replace fossil fuels, such as algal biofuels, biodiesel, bioethanol, and biohydrogen. Further, it reviews microbial technologies, discusses an immobilization method, and highlights the efficiency of enzymes as a key factor in biofuel production. In closing, the book outlines future

research directions to increase oil yields in microalgae, which could create new opportunities for lipid-based biofuels, and provides an outlook on the future of global biofuel production. Given its scope, the book will appeal to all researchers and engineers working in the renewable energy sector.

Communicating Science Toss Gascoigne, Bernard Schiele, Joan Leach, Michelle Riedlinger, Luisa Massarani, Bruce V. Lewenstein, Peter Broks, 2020-09-14 Modern science communication has emerged in the twentieth century as a field of study, a body of practice and a profession—and it is a practice with deep historical roots. We have seen the birth of interactive science centres, the first university actions in teaching and conducting research, and a sharp growth in employment of science communicators. This collection charts the emergence of modern science communication across the world. This is the first volume to map investment around the globe in science centres, university courses and research, publications and conferences as well as tell the national stories of science communication. How did it all begin? How has development varied from one country to another? What motivated governments, institutions and people to see science communication as an answer to questions of the social place of science? *Communicating Science* describes the pathways followed by 39 different countries. All continents and many cultures are represented. For some countries, this is the first time that their science communication story has been told.

Open Channel Hydraulics A. Osman Akan, Seshadri S. Iyer, 2021-05-21 *Open Channel Hydraulics*, Second Edition provides extensive coverage of open channel design, with comprehensive discussions on fundamental equations and their application to open channel hydraulics. Introduces and explains all the main topics on open channel flows using numerous worked examples to illustrate key points Features extensive coverage of bridge hydraulics and scour – important topics civil engineers need to know as aging bridges are a major concern Includes Malcherek's momentum approach where applicable

Wildlife-habitat Relationships in Oregon and Washington David H. Johnson, Thomas A. O'Neil, 2001 This volume provides information about the terrestrial, freshwater, and marine habitats of Oregon and Washington and the wildlife that depend upon them; it also supports broader and more consistent conservation planning, management, and research. The 27 chapters identify 593 wildlife species, define some 300 wildlife terms, profile wildlife communities, review introduced and extirpated species and species at risk, and discuss management approaches. The volume includes color and bandw photographs, maps, diagrams, and illustrations; and the accompanying CD-ROM contains additional wildlife data (60,000 records), maps, and seven matrixes that link wildlife species with their respective habitat types. Johnson is a wildlife biologist, engineer, and habitat scientist; and O'Neill is director of the Northwest Habitat Institute; they worked together on this publication project as its managing directors. Floating PV Plants Marco Rosa-Clot, 2020-02 Renewable energy sources (RES) are one of the important instruments that human beings can use to tackle problems created by climate change. We expect a quick expansion of RES in the next few years. One important new technology is the floating photovoltaic (FPV) which is at its very beginning but

which after only 10 years from its first proposal has already reached the target of 2 GWp of plants installed. This book explores the reasons for such growth and the advantages of this new technology. FPV plants are easily integrated into any human settlements and can use available fresh water as well as salt water near coastal areas. So their geographic potential is unlimited. Furthermore, their environmental impact is limited and the managing and decommissioning of plants are very cheap. The book offers a perspective on the many facets of this technology as well as an analysis of the economic aspect and of the final electricity cost which in a short time will go down to less than 50 \$ per MWh. Contributions from different authors have helped in sectors such as the raft structure, the wave impact, and the environment problems. Investigates the installation of photovoltaic systems over the water's surface Offers theoretical and practical explanations on how to study, analyze and design photovoltaic energy systems Considers how the use of floating photovoltaic systems can work to fulfill domestic energy demand

The Electric Power Engineering Handbook Leonard L. Grigsby, 2000-09-28 The astounding technological developments of our age depend on a safe, reliable, and economical supply of electric power. It stands central to continued innovations and particularly to the future of developing countries. Therefore, the importance of electric power engineering cannot be overstated, nor can the importance of this handbook to the power engineer. Until now, however, power engineers have had no comprehensive reference to help answer their questions quickly, concisely, and authoritatively-A one-stop reference written by electric power engineers specifically for electric power engineers.

Convex Analysis and Minimization Algorithms II Jean-Baptiste Hiriart-Urruty, Claude Lemarechal, 2013-03-14 From the reviews: The account is quite detailed and is written in a manner that will appeal to analysts and numerical practitioners alike...they contain everything from rigorous proofs to tables of numerical calculations.... one of the strong features of these books...that they are designed not for the expert, but for those who wish to learn the subject matter starting from little or no background...there are numerous examples, and counter-examples, to back up the theory...To my knowledge, no other authors have given such a clear geometric account of convex analysis. This innovative text is well written, copiously illustrated, and accessible to a wide audience

Thermal Design of Heat Exchangers: A Numerical Approach Eric M. Smith, 1997 This book is unique in adopting a numerical approach to the thermal design of heat exchangers. The computation of mean temperature difference, with accommodation of longitudinal conduction effects, makes full optimisation of the exchanger core possible. Sets of

three partial differential equations for both contra-flow and cross-flow are established, and form the bases from which a range of methods of direct-sizing and stepwise rating may proceed. Optimisation of an exchanger for steady-state operation is achieved by an approach which allows maximum utilisation of the allowable pressure losses. Transient methods are covered, including the Method of Characteristics, and the Single-Blow method of testing is treated. Numerous aspects of low and high temperature design are discussed, and extensive references to the literature are provided. Schematic algorithms are listed to allow students and practitioners to construct their own solutions, and spline-fitting of data is discussed.

Eutrophication Research - State of the Art R. Roijackers, R. H. Aalderink, G. Blom, 1998-05-31 Eutrophication is a classic example of a problem that requires a multi-disciplinary, multi-sectorial and multi-focal approach for its solution. Over time many surface waters have become overloaded with nutrients with dire ecological consequences. Initial attempts to tackle excessive algal growths in lakes by crude chemical treatments were superseded by strategies that began to attack what was believed to be the source of the problems: excessive phosphorus in wastewater. Today it is widely accepted that eutrophication is a highly complex phenomenon that can be averted or abated by holistic approaches. The development of a more thorough understanding of eutrophication and of practicable measures to combat it have been prime concerns in the distinguished career of Professor Lambertus Lijklema. It is thus most appropriate that to pay tribute to him on his retirement leading experts from the world of eutrophication research should gather to review our knowledge of all aspects of the phenomenon. The 27 papers selected for these proceedings examine the science of the processes involved and of the whole system, the ecological effects, modelling studies, and the policies and management measures that are being successfully applied. These proceedings will be an exceedingly valuable publication for all those engaged with the problem of eutrophication.
