*Technical Guide for the Design and Construction of Tall Wood Buildings in Canada* Erol Karacabeyli,Conroy Lum,Fpinnovations,2014-04 Building tall in wood is not a new phenomenon. In fact, Canada has a history of constructing tall wood buildings out of heavy timber and brick elements, reaching up to nine storeys. In the early 20th century, with the increase in reinforced concrete and structural steel research and construction, and with growing concerns over fire and durability, the structural use of wood fell out of common use in tall buildings. This trend is beginning to reverse, however. In the last few decades, the world has seen a resurgence of mass timber products and systems that are paving the way for tall wood buildings. This triggered an initiative by Natural Resources Canada (NRCan) to support tall wood building demonstration projects to enhance Canada's position as a global leader in wood building construction, by showcasing the application and performance of advanced wood technologies. The Technical Guide for the Design and Construction of Tall Wood Buildings in Canada has been prepared to assist architects, engineers, code consultants, developers, building owners, and Authorities Having Jurisdiction (AHJ) in understanding the unique issues to be addressed when developing and constructing tall wood buildings.

*Plant Life of Western Australia* John Stanley Beard,2015 Dr. John S. Beard came to Western Australia in 1961 as Foundation Director of the Botanic Garden being established in Perth's King's Park. The garden, which officially opened in 1965, has become one of Perth's major attractions for visitors and the local population. It has a scientific as well as a popular function, being principally devoted to study of native plants. First published in 1990, Plant Life of Western Australia grew out of a project that was developed with the assistance of Dr. Beard. The project became known as the Vegetation Survey of Western Australia, with the aim of mapping the plant life of the entire state. Any ecologist travelling through this stretch of country is not only aware of the plant species that are present and their arrangement into communities, but of the whole structure of the landscape, its geology, its forms in mountains, hills, and plains, and the climate, both past and present. Dr. Beard acquired an unrivalled knowledge of the landscapes and their plant cover over the immense area of Western Australia. Through the project, a series of vegetation maps were produced and the project was finally completed in 1981. About 200,000 km of land were covered by vehicle over the course of 17 years. This was more than an ordinary degree of awareness, therefore the first edition of the book was published with the desire of sharing the remarkable plant life of Western Australia with others. Following the death of Dr. John S. Beard in 2011, this new edition has been revised by Alex George and Neil Gibson. Dr. Beard originally took about 2,000 color slides over the course of his extensive botanical field work, and a selection of the best color illustrations are featured prominently in the book. \*\*\* Librarians: ebook available on ProQuest and EBSCO [Subject: Botany, Ecology, Horticulture, Australian Studies]

There are descriptions of over 130 plant species, from seagrasses to the beautiful Boronia alata, from the mangroves of the Abrolhos Islands to invasive Arum Lilies, from the giant Tuart Eucalypts to beach spinifexes. Each description yields a wealth of detail on the habits and peculiarities of not only the plants, but also some of the animal life associated with them. Superbly illustrated with watercolor drawings of each species, Coastal Plants is an important and beautiful reference work on this diverse group of plants.

**Field Guide to the Wildflowers of Australia's South West** Jane Scott,Georgiana Molloy,2005 Over a three year period Jane Scott has been collecting native plants in the Margaret River-Augusta area for the Regional Herbarium Project, an initiative of the Western Australian Herbarium. Patricia Negus painted these specimens in meticulous detail in watercolour, after which Jane pressed, lodged, identified and described each plant. The result is this remarkable book that is both a work of art and a detailed botanical reference.
