Historical Stock Car Models Chuck Poi,2016-01-30 Stock car racing history from 1950 through the early '70's with emphasis on the first two eras of factory involvement. Over 60 models of actual stock car racers show how these cars started out as basically stock vehicles and eventually changed to the purpose built race cars by the late '60's. There are three pictures of each car showing the whole vehicle, the engine, and the chassis. Besides NASCAR, there are vehicles that raced in AAA, USAC, ARCA, & IMCA. There are also two cars that raced in the 1952 Mexican Road Race, and two that raced in what was called the Permatex race at Daytona. Many of the models are cars raced by drivers before they became famous. Still other cars are those that were driven by men who never visited victory lane, but still raced to the best level that they and their car were capable of. There is a history of each car and also a narrative describing the model itself. This book pays tribute and recognizes the men that built and raced these cars.

eWork and eBusiness in Architecture, Engineering and Construction. ECPM 2006 Manuel Martinez,Raimar Scherer,2020-11-25 The task of structuring information on built environment has presented challenges to the research community, software developers and the industry for the last 20 years. Recent work has taken advantage of Web and industry standards such as XML, OWL, IFC and STEP. Another important technology for the fragmented AEC industry is digital communication. Strong Towns Charles L. Marohn, Jr.,2019-10-01 A new way forward for sustainable quality of life in cities of all sizes Strong Towns: A Bottom-Up Revolution to Build American Prosperity is a book of forward-thinking ideas that breaks with modern wisdom to present a new vision of urban development in the United States. Presenting the foundational ideas of the Strong Towns movement he co-founded, Charles Marohn explains why cities

of all sizes continue to struggle to meet their basic needs, and reveals the new paradigm that can solve this longstanding problem. Inside, you'll learn why inducing growth and development has been the conventional response to urban financial struggles—and why it just doesn't work. New development and high-risk investing don't generate enough wealth to support itself, and cities continue to struggle. Read this book to find out how cities large and small can focus on bottom-up investments to minimize risk and maximize their ability to strengthen the community financially and improve citizens' quality of life. Develop in-depth knowledge of the underlying logic behind the "traditional" search for never-ending urban growth. Learn practical solutions for ameliorating financial struggles through low-risk investment and a grassroots focus. Gain insights and tools that can stop the vicious cycle of budget shortfalls and unexpected downturns. Become a part of the Strong Towns revolution by shifting the focus away from top-down growth toward rebuilding American prosperity. Strong Towns acknowledges that there is a problem with the American approach to growth and shows community leaders a new way forward. The Strong Towns response is a revolution in how we assemble the places we live.

Building the Hyperconnected Society- Internet of Things Research and Innovation Value Chains, Ecosystems and Markets Ovidiu Vermesan, Peter Friess, 2022-09-01 This book aims to provide a broad overview of various topics of Internet of Things (IoT), ranging from research, innovation and development priorities to enabling technologies, nanoelectronics, cyber-physical systems, architecture, interoperability and industrial applications. All this is happening in a global context, building towards intelligent, interconnected decision making as an essential driver for new growth and co-competition across a wider set of markets. It is intended to be a standalone book in a series that covers the Internet of Things activities of the IERC – Internet of Things European Research Cluster from research to technological innovation, validation and deployment. The book builds on the ideas put forward by the European Research Cluster on the Internet of Things Strategic Research and Innovation Agenda, and presents global views and state of the art results on the challenges facing the research, innovation, development and deployment of IoT in future years. The concept of IoT could disrupt consumer and industrial product markets generating new revenues and serving as a growth driver for semiconductor, networking equipment, and service provider end-markets globally. This will create new application and product end-markets, change the value chain of companies that create the IoT technology and deploy it in various end sectors, while impacting the business models of semiconductor, software, device, communication and service provider stakeholders. The proliferation of intelligent devices at the edge of the network with the introduction of embedded software and app-driven hardware into manufactured devices, and the ability, through embedded software/hardware developments, to monetize those device functions and features by offering novel solutions, could generate completely new types of revenue streams. Intelligent and IoT devices leverage software, software licensing, entitlement management, and Internet connectivity in ways that address many of the societal challenges that we will face in the next decade.

Jonathan's Journey Jayaraman Krishnan, 2018-01-02 "A book that will change your imagination." - Murali Sunderarajan, mywritingworld.com "This book explains the practical implication of ethics, moral reasoning, and how people get trapped in a cognitive tunnel." - Chandrasekar Chatterjee, former professor at Paris University "He who can no longer pause to wonder and stand in awe is as good as dead; his eyes are closed."
