Amsterdam Zuidas European Space W. G. M. Salet,2005 Until the beginning of the nineties, the centre of Amsterdam was regarded as the obvious nucleus of urban and regional economic activity. But since then, issues of accessibility and scale have induced the development of multi-nodal spatial networks on a regional scale. In ten years' time the spatial and economic configuration of the region has changed dramatically. The development of the Zuidas in the coming thirty years offers a strategic chance to furnish this regionalization of urbanity with a new, more appealing structure. After all, the Zuidas is not only emerging as a business centre of international significance, its favourable position in the traffic and transport system provides it with optimum conditions for evolution into a varied urban-centre environment.

Visual proficiency - A perspective on art education Kunibert Bering, Rolf Niehoff, 2015-12-18 Every day, over a million images are uploaded to flickr. This is a striking example of the so-called »flood« of images that emerged with the beginning of the digital age. A generation of adolescents has already been socialised with this flood of images and deals with it on a daily basis, both in their networks and elsewhere. Art education thus faces significant challenges: art is the only school subject that deals with the problems inherent in images as images, making them the focus of pedagogic activity. This volume presents both the foundations for engaging with the phenomenon of the »image« in a competent and historically informed manner as well as the perspectives for art education that arise from these foundations. It is based upon the conviction that providing orientation in a world defined by images does not mean following solely a technocratic, functionalist or even neoliberal »concept of education«. Quite the contrary: »providing an orientation« for how to deal with images in a world that is dominated by them is a crucial part of the holistic development of young people's personalities. The volume's main focus lies upon the new functions taken on both by the image and by art more generally. It takes into account aspects of globalisation and participation and also includes more unusual views (often from a cross-media perspective) of art and its historical repertory, which even current image creation is unable to dispense with. The volume also deals extensively with architecture and the images it conveys.

Designing for Sustainability Tim Frick,2016-08-23 Pixels use electricity. If the internet were a country, it would be the sixth largest in terms of electricity use. The average web page (according to the HTTP Archive) is now over 2 megabytes in size. Bloated websites lead to slow load times, frustrated users, and wasted energy. This book identifies four key areas where sustainability principles can be applied to the process of creating websites that are speedy, user-friendly and energy-efficient: findability, performance optimization, design and user experience, and green hosting. Design and user experience (UX) are where the seeds of web sustainability are sown. Websites that provide a streamlined experience--putting the right things in front of users at precisely the moment needed and nothing more--are more sustainable websites. In the case of the web, people-friendly is also more planet-friendly. This book will help you get there.--Provided by publisher.

Archaeology of the Bible Jean-Pierre Isbouts,2016 From ancient holy sites, to buried relics and treasures, National Geographic uncovers the history and the archaeological discoveries from Scripture and the biblical world. Richly illustrated and written from an objective and nondenominational perspective, author Jean-Pierre Isbouts uses the latest scientific and archaeological discoveries to place biblical stories in the framework of human history. Chapters, beginning with the dawn of human civilization and ending with present day and the future of archaeology, chronicle hundreds of sites and artifacts found in Sumer, Babylon, the Second Temple, along the route of the Exodus, and in many other regions across the Middle East. Timelines bridge hundreds of years and several empires, maps give readers a visual sense of location, while hundreds of photos and illustrations of rare artifacts

and ancient places add to the visual splendor. It concludes with details of what remains to be found and the evolving dynamic of biblical faith in an increasingly scientific world in which archaeologists make daily breakthroughs.
