**The Privatization of Care** Pat Armstrong,Hugh Armstrong,2019-09-25 Nursing homes are where some of the most vulnerable live and work. In too many homes, the conditions of work make it difficult to make care as good as it can be. For the last eight years an international team from Germany, Sweden, Norway, the UK, the US and Canada have been searching for promising practices that treat residents, families and staff with dignity and respect in ways that can also bring joy. While we did find ideas worth sharing, we also saw a disturbing trend toward privatization. Privatization is the process of moving away not only from public delivery and public payment for health services but also from a commitment to shared responsibility, democratic decision-making, and the idea that the public sector operates according to a logic of service to all. This book documents moves toward privatization in the six countries and their consequences for families, staff, residents, and, eventually, us all. None of the countries has escaped pressure from powerful forces in and outside government pushing for privatization in all its forms. However, the wide variations in the extent and nature of privatization indicate privatization is not inevitable and our research shows there are alternatives.

**Constraint-Based Scheduling** Philippe Baptiste,Claude Le Pape,Wim Nuijten,2012-12-06 Constraint Programming is a problem-solving paradigm that establishes a clear distinction between two pivotal aspects of a problem: (1) a precise definition of the constraints that define the problem to be solved and (2) the algorithms and heuristics enabling the selection of decisions to solve the problem. It is because of these capabilities that Constraint Programming is increasingly being employed as a problem-solving tool to solve scheduling problems. Hence the development of Constraint-Based Scheduling as a field of study. The aim of this book is to provide an overview of the most widely used Constraint-Based Scheduling techniques. Following the principles of Constraint Programming, the book consists of three distinct parts: The first chapter introduces the basic principles of Constraint Programming and provides a model of the constraints that are the most often encountered in scheduling problems. Chapters 2, 3, 4, and 5 are focused on the propagation of resource constraints, which usually are responsible for the hardness of the scheduling problem. Chapters 6, 7, and 8 are dedicated to the resolution of several scheduling problems. These examples illustrate the use and the practical efficiency of the constraint propagation methods of the previous chapters. They also show that besides constraint propagation, the exploration of the search space must be carefully designed, taking into account specific properties of the considered problem (e.g., dominance relations, symmetries, possible use of decomposition rules). Chapter 9 mentions various extensions of the model and presents promising research directions.
