Drug Discovery and Drug Development Madhu Dikshit,2021-02-10 Over the years, India has attained a prominent global position in the manufacture of Generic Drugs. This success can be attributed to its synthetic organic chemistry and chemical engineering strengths, nurtured by the timely policies of the Government of India. However, breakthrough successes in New Drug Discovery have remained elusive, despite the brilliant and sustained efforts of many Indian researchers and Pharma establishments. The Indian National Science Academy thought it appropriate to document India's New Drug Discovery Research (NDDR) journey to date. Gathering contributions from prominent researchers in the Indian Pharma Industry and Academia, this book highlights their efforts, achievements, and the status quo of Indian NDDR.

Lost America : The Abandoned Roadside West Troy Paiva, A stunningly photographed examination of the roadside icons that dot America's landscape. Lost America celebrates the boom-to-bust towns, aircraft bone yards, and filling stations of days past that were sacrificed at the altars of speed and technology and relegated to windswept desert plains and abandoned fields. The eye-catching and memorable photography is complemented with a succinct text history that details the rise and fall of each subject. The result is an impressive tour of an America still standing, yet largely forgotten.

When God Made Light Matthew Paul Turner,2018-02-13 From the author and illustrator of the best-selling When God Made You comes a new illuminating message about God's design affirming young readers. 'Let there be light!' that's what God said. And light began shining and then started to spread. Wild and creative illustrations from top children's illustrator David Catrow pair with Matthew Paul Turner's lyrical verse in this message of a God-made light that cuts through darkness to bring vision and hope to all young readers. This light radiates, chasing away the shadows, providing the wonder and fun of stargazing or firefly chasing. Most important, this light appears in each child--an inner God-given spark that grows and will be used to change the world.

The Privatization of Care Pat Armstrong,Hugh Armstrong,2019-09-25 Nursing homes are where some of the most vulnerable live and work. In too many homes, the conditions of work make it difficult to make care as good as it can be. For the last eight years an international team from Germany, Sweden, Norway, the UK, the US and Canada have been searching for promising practices that treat residents, families and staff with dignity and respect in ways that can also bring joy. While we did find ideas worth sharing, we also saw a disturbing trend toward privatization. Privatization is the process of moving away not only from public delivery and public payment for health services but also from a commitment to shared responsibility, democratic decision-making, and the idea that the public sector operates according to a logic of service to all. This book documents moves toward privatization in the six countries and their consequences for families, staff, residents, and, eventually, us all. None of the countries has escaped pressure from powerful forces in and outside government pushing for privatization in all its forms. However, the wide variations in the extent and nature of privatization indicate privatization is not inevitable and our research shows there are alternatives.

Computation and Neural Systems Frank H. Eeckman,James M. Bower,2012-12-06 Computational neuroscience is best defined by its focus on understanding the nervous systems as a computational device rather than

by a particular experimental technique. Accordingly, while the majority of the papers in this book describe analysis and modeling efforts, other papers describe the results of new biological experiments explicitly placed in the context of computational issues. The distribution of subjects in Computation and Neural Systems reflects the current state of the field. In addition to the scientific results presented here, numerous papers also describe the ongoing technical developments that are critical for the continued growth of computational neuroscience. Computation and Neural Systems includes papers presented at the First Annual Computation and Neural Systems meeting held in San Francisco, CA, July 26--29, 1992.

One day, when Martin Luther the Reformer walks into his shop, the barber musters up the courage to ask the outlawed monk how to pray. Luther responds by writing a letter to the barber. Probabilistic Models of the Brain Rajesh P.N. Rao, Bruno A. Olshausen, Michael S. Lewicki, 2002-03-29 A survey of probabilistic approaches to modeling and understanding brain function. Neurophysiological, neuroanatomical, and brain imaging studies have helped to shed light on how the brain transforms raw sensory information into a form that is useful for goal-directed behavior. A fundamental question that is seldom addressed by these studies, however, is why the brain uses the types of representations it does and what evolutionary advantage, if any, these representations confer. It is difficult to address such questions directly via animal experiments. A promising alternative is to use probabilistic principles such as maximum likelihood and Bayesian inference to derive models of brain function. This book surveys some of the current probabilistic approaches to modeling and understanding brain function. Although most of the examples focus on vision, many of the models and techniques are applicable to other modalities as well. The book presents top-down computational models as well as bottom-up neurally motivated models of brain function. The topics covered include Bayesian and information-theoretic models of perception, probabilistic theories of neural coding and spike timing, computational models of lateral and cortico-cortical feedback connections, and the development of receptive field properties from natural signals.

Molecular Diagnostics in Dermatology and Dermatopathology Michael J. Murphy, 2011-03-24 *Molecular Diagnostics in Dermatology and Dermatopathology* presents the basics of molecular biology and molecular diagnostic methods most commonly used in the clinical laboratory, with an emphasis on the concepts and testing most relevant to dermatological diseases. Topics include the integration of newer diagnostic and prognostic techniques with 'traditional' histologic approaches, and discussions of regulatory, ethical, legal, economic issues and 'newer' technologies. This important diagnostic tool outlines the clinically relevant uses (i.e.; diagnostic, staging and/or prognostic) applications of these techniques in the field of dermatology. Molecular studies that investigate the pathogenesis of skin diseases will be excluded, unless they also have a direct diagnostic utility. The book will be of interest to practicing pathologists, dermatology and pathology residents, dermatologists, and dermatopathologists.

Life: Quality Assessment Rudy Ford, 2021-11-16 Life is a quality that distinguishes physical beings having biological processes from those that do not. Plants, animals, bacteria, etc., are some of the various existing forms of life. Varied definitions of life have been put forward by scientists and philosophers over time. There also exist various schools of thought regarding the assessment of the quality of life. It is a subjective concept that varies with the population studied. It is generally conceptualized as a multi-dimensional construct made up of a number of independent domains encompassing physical health, psychological well-being, social relationships

and functional roles. Different approaches, evaluations, methodologies and advanced studies on this topic have been included in this book. Such selected concepts that redefine quality assessment of life have been presented herein. A number of latest researches have been included to keep the readers up-to-date with the global concepts in this area of study.

Computational Intelligence Jacek M. Zurada,Robert Jackson Marks (II),Charles J. Robinson,1994

The Merging of the Senses Barry E. Stein,M. Alex Meredith,1993-01-22 Bringing together neural, perceptual, and behavioral studies, The Merging of the Senses provides the first detailed review of how the brain assembles information from different sensory systems in order to produce a coherent view of the external world. Stein and Meredith marshal evidence from a broad array of species to show that interactions among senses are the most ancient scheme of sensory organization, an integrative system reflecting a general plan that supersedes structure and species. Most importantly, they explore what is known about the neural processes by which interactions among the senses take place at the level of the single cell.The authors draw on their own experiments to illustrate how sensory inputs converge (from visual, auditory, and somatosensory modalities, for instance) on individual neurons in different areas of the brain, how these neurons integrate their inputs, the principles by which this integration occurs, and what this may mean for perception and behavior. Neurons in the superior colliculus and cortex are emphasized as models of multiple sensory integrators.

Perception as Bayesian Inference David C. Knill,Whitman Richards,1996-09-13 This 1996 book describes an exciting theoretical paradigm for visual perception based on experimental and computational insights.

The Lightlings Robert Charles Sproul,2006 Charlie's fears of the dark are calmed by his grandfather's story of the Son of the King of Light brought into the world so that people need never fear the darkness.
