**Fighting Invisible Enemies** Clifford E. Trafzer, 2019-05-09  
Native Americans long resisted Western medicine—but had less power to resist the threat posed by Western diseases. And so, as the Office of Indian Affairs reluctantly entered the business of health and medicine, Native peoples

reluctantly began to allow Western medicine into their communities. *Fighting Invisible Enemies* traces this transition among inhabitants of the Mission Indian Agency of Southern California from the late nineteenth through the mid-twentieth century. What historian Clifford E. Trafzer describes is not so much a transition from one practice to another as a gradual incorporation of Western medicine into Indian medical practices. Melding indigenous and medical history specific to Southern California, his book combines statistical information and documents from the federal government with the oral narratives of several tribes. Many of these oral histories—detailing traditional beliefs about disease causation, medical practices, and treatment—are unique to this work, the product of the author's close and trusted relationships with tribal elders. Trafzer examines the years of interaction that transpired before Native people allowed elements of Western medicine and health care into their lives, homes, and communities. Among the factors he cites as impelling the change were settler-borne diseases, the negative effects of federal Indian policies, and the sincere desire of both Indians and agency doctors and nurses to combat the spread of disease. Here we see how, unlike many encounters between Indians and non-Indians in Southern California, this cooperative effort proved positive and constructive, resulting in fewer deaths from infectious diseases, especially tuberculosis. The first study of its kind, Trafzer's work fills gaps in Native American, medical, and Southern California history. It

informs our understanding of the working relationship between indigenous and Western medical traditions and practices as it continues to develop today.

**That One Cigarettee** Stu Krieger, 2017-11-24 That One Cigarette by Stu Krieger A story of ordinary peoplemaking extraordinary ripples in the ocean of life That One Cigarette is a counterfactual history novel following four families from November of 1963 to January of 2009. In November '63, Ed Callahan is an assistant manager at the Texas School Book Depository in Dallas. His promise to his wife to quit smoking as soon as he finishes the pack in his pocket ends up changing the course of events on November 22. The fallout of this action alters the lives of the Scott family in Rochester, New York, the Kaufman/Goldman family in Los Angeles and the extended Kashat family in Baghdad, Iraq. It's not until the final chapters that all of these lives intersect, but along the way, That One Cigarette explores questions of fate, love, loyalty and the ability of each of us to make defining contributions to our world by simply being present in our own lives.

Japanese Missions to the International Space Station John O'Sullivan, 2019-03-23 Japan has a rich history of human spaceflight, flying in space with both NASA and the Soviet/Russian space agencies over the years. This book tells the story of the JAXA astronauts who have visited the International Space Station and how they have lived on board, helped construct the space laboratory and performed valuable scientific

experiments. JAXA has contributed the largest single module to the ISS: the Kibō (Hope) science laboratory with its Logistics Module, Exposed Facility and robot arm. JAXA supplies the station with cargo and supplies on its automated cargo spacecraft, the H-II Transfer Vehicle (HTV), but it is the human endeavour that captures the imagination. From brief visits to six-month expeditions, from spacewalking to commanding the Earth's only outpost in space, JAXA astronauts have played a vital role in the international project. Extensive use of colour photographs from NASA and JAXA depicting the experiments carried out and the phases of the ISS construction, together with the personal stories of the astronauts' experiences in space, highlight the crucial part the Japanese have played in human spaceflight.

50 Years of Solar System Exploration Linda Billings, 2020 To commemorate the 50th anniversary of the first successful planetary mission, Mariner 2 sent to Venus in 1962, the NASA History Program Office, the Division of Space History at the National Air and Space Museum, NASA's Science Mission Directorate, and the Jet Propulsion Laboratory organized a symposium. Solar System Exploration @ 50 was held in Washington, D.C., on 25-26 October 2012. The purpose of this symposium was to consider, over the more than 50-year history of the Space Age, what we have learned about the other bodies of the solar system and the processes by which we have learned it. Symposium organizers asked authors to address broad topics relating to the history of solar system

exploration such as various flight projects, the development of space science disciplines, the relationship between robotic exploration and human spaceflight, the development of instruments and methodologies for scientific exploration, as well as the development of theories about planetary science, solar system origins and implications for other worlds. The papers in this volume provide a richly textured picture of important developments - and some colorful characters - in a half century of solar system exploration. A comprehensive history of the first 50 years of solar system exploration would fill many volumes. What readers will find in this volume is a collection of interesting stories about money, politics, human resources, commitment, competition and cooperation, and the faster, better, cheaper era of solar system exploration--

**3D Printing in Space** National Research Council (U.S.). Committee on Space-Based Additive Manufacturing, 2014 Additive manufacturing has the potential to positively affect human spaceflight operations by enabling the in-orbit manufacture of replacement parts and tools, which could reduce existing logistics requirements for the International Space Station and future long-duration human space missions. The benefits of in-space additive manufacturing for robotic spacecraft are far less clear, although this rapidly advancing technology can also potentially enable space-based construction of large structures and, perhaps someday, substantially in the future, entire spacecraft. Additive manufacturing can also help to reimagine a new space architecture that is not constrained by the design and manufacturing confines of gravity, current manufacturing processes, and launch-related structural stresses. The specific benefits and potential scope of additive manufacturing

remain undetermined. The realities of what can be accomplished today, using this technology on the ground, demonstrate the substantial gaps between the vision for additive manufacturing in space and the limitations of the technology and the progress that has to be made to develop it for space use. 3D Printing in Space evaluates the prospects of in-space additive manufacturing. This report examines the various technologies available and currently in development, and considers the possible impacts for crewed space operations and robotic spacecraft operations. Ground-based additive manufacturing is being rapidly developed by industry, and 3D Printing in Space discusses government-industry investments in technology development. According to this report, the International Space Station provides an excellent opportunity for both civilian and military research on additive manufacturing technology. Additive manufacturing presents potential opportunities, both as a tool in a broad toolkit of options for space-based activities and as a potential paradigm-changing approach to designing hardware for in-space activities. This report makes recommendations for future research, suggests objectives for an additive manufacturing roadmap, and envisions opportunities for cooperation and joint development.

### *The Orbital Perspective* Astronaut Ron

Garan, 2015-02-02 For astronaut Ron Garan, living on the International Space Station was a powerful, transformative experience—one that he believes holds the key to solving our problems here on Earth. On space walks and through windows, Garan was struck by the stunning beauty of the Earth from space but sobered by knowing how much needed to be done to help this troubled planet. And yet

on the International Space Station, Garan, a former fighter pilot, was working work side by side with Russians, who only a few years before were "the enemy." If fifteen nationalities could collaborate on one of the most ambitious, technologically complicated undertakings in history, surely we can apply that kind of cooperation and innovation toward creating a better world. That spirit is what Garan calls the "orbital perspective." Garan vividly conveys what it was like learning to work with a diverse group of people in an environment only a handful of human beings have ever known. But more importantly, he describes how he and others are working to apply the orbital perspective here at home, embracing new partnerships and processes to promote peace and combat hunger, thirst, poverty, and environmental destruction. This book is a call to action for each of us to care for the most important space station of all: planet Earth. You don't need to be an astronaut to have the orbital perspective. Garan's message of elevated empathy is an inspiration to all who seek a better world.

**The MIR Space Station** David M. Harland, 1997-10  
This book explores the development and operation of the Mir Space Station over the last ten years, focusing on the engineering technology aspects of constructing and operating an orbital complex designed to be occupied by humans for long periods of time.

*Von Braun* Michael Neufeld, 2017-04-12 Curator and space historian at the Smithsonian's National Air and Space Museum delivers a brilliantly nuanced biography of controversial space pioneer Wernher

von Braun. Chief rocket engineer of the Third Reich and one of the fathers of the U.S. space program, Wernher von Braun is a source of consistent fascination. Glorified as a visionary and vilified as a war criminal, he was a man of profound moral complexities, whose intelligence and charisma were coupled with an enormous and, some would say, blinding ambition. Based on new sources, Neufeld's biography delivers a meticulously researched and authoritative portrait of the creator of the V-2 rocket and his times, detailing how he was a man caught between morality and progress, between his dreams of the heavens and the earthbound realities of his life.
