A Fire Story Brian Fies,2019-03-05 The award-winning author and illustrator presents a personal account of the Northern California wildfires of 2017 in this moving graphic memoir. On October 9th, 2017, wildfires burned through Northern California, resulting in forty-four fatalities and the destruction of thousands of homes. In A Fire Story, Brian Fies shares an unflinching account of this tragedy as he and his wife experienced it—including losing their house and every possession that didn’t fit in their car. As the fires continued to burn through the area, Brian pulled together A Fire Story and posted it online. It immediately went viral. He later expanded the webcomic to include environmental insight and the fire stories of his neighbors. A Fire Story is a candid testimony of the wildfires that left homes destroyed, families broken, and a community determined to rebuild. This updated and expanded edition includes thirty-two pages of all-new material, extending the story past the events of the hardcover edition to include updates on the rebuilding, wrestling with insurance, wrangling with contractors, the management of sometimes volatile emotions, and the threats of yet another wildfire.

The Library Stuart A.P. Murray,2009-07-09 Throughout the history of the world, libraries have been constructed, burned, discovered, raided, and cherished—and the treasures they've housed have evolved from early stone tablets to the mass-produced, bound paper books of our present day. The Library invites you to enter the libraries of ancient Greece, early China, Renaissance England, and modern-day America, and speaks to the book lover in all of us. Incorporating beautiful illustrations, insightful quotations, and many marvelous mysteries of libraries—their books, patrons, and keepers—this book is certain to provide you with a wealth of knowledge and enjoyment.

Daylight Illumination–Color–Contrast Tables for Full-form Objects M Nagel,2012-12-02 Daylight Illumination-Color-Contrast Tables for Full-form Objects is the result of a major computational project concerning the illumination, color, and contrast conditions in naturally illuminated objects. The project from which this two-chapter book is derived is originally conceived in support of the various remote sensing and image processing activities of the Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Oberpfaffenhofen, West Germany DFVLR, in particular, those depending on the quantitative photometric and colorimetric evaluation of photographs and other environmental records. This book contains a comprehensive set of tables, from which often-needed reference and engineering data can be taken on the inherent illumination, color, and contrast in a generalized full-form model object illuminated by the sun, the sky, and light reflected from the ground, and viewed by a nearby observer. The computations leading to the tables pertaining to the luminance and color distributions in the sky were carried out at the Meteorologisches Institut der Universität München.
