Teaching Language and Teaching Literature in Virtual Environments María Luisa Carrió-Pastor, 2018-09-14 This book sheds new light on language and literature teaching, and offers examples of teaching language in virtual environments. Providing an overview of virtual environments for teaching, it also includes chapters devoted to methodology design for second language teaching in these environments. Further it describes tools for second/ foreign language teaching and proposals for specific second language teaching in virtual environments. Lastly, it presents experiments on literature teaching in virtual environments and discusses the future of technology in education. With interdisciplinary appeal, the book is a particularly valuable resource for scholars with an interest in technology, language teaching and literature teaching.

IUTAM Symposium on Topological Design Optimization of Structures, Machines and Materials Martin Philip Bendsoe, Niels Olhoff, Ole Sigmund, 2006-10-03 This volume offers edited papers presented at the IUTAM-Symposium Topological design optimization of structures, machines and materials - status and perspectives, October 2005. The papers cover the application of topological design optimization to fluid-solid interaction problems, acoustics problems, and to problems in biomechanics, as well as to other multiphysics problems. Also in focus are new basic modelling paradigms, covering new geometry modelling such as level-set methods and topological derivatives.

Handbook of Solar Energy G. N. Tiwari, Arvind Tiwari, Shyam, 2016-06-27 This handbook aims at providing a comprehensive resource on solar energy. Primarily intended to serve as a reference for scientists, students and professionals, the book, in parts, can also serve as a text for undergraduate and graduate course work on solar energy. The book begins with availability, importance and applications of solar energy, definition of sun and earth angles and classification of solar energy as thermal and photon energy. It then goes on to cover day lighting parameters, laws of thermodynamics including energy and exergy analysis, photovoltaic modules and materials, PVT collectors, and applications such as solar drying and distillation. Energy conservation by solar energy and energy matrices based on overall thermal and electrical performance of hybrid system are also discussed. Techno-economic feasibility of any energy source is the backbone of its success and hence economic analysis is covered. Some important constants, such as exercises and problems increase the utility of the book as a text.

History of Electric Cars Nigel Burton, 2013-06-30 One hundred years ago electric cars were the most popular automobiles in the world. In the late nineteenth century and at the start of the twentieth century, they outsold every other type of car. And yet, within a couple of decades of the start of the twentieth century, the electric car had vanished. Thousands of battery-powered cars disappeared from the streets, replaced by the internal combustion engine, and their place in the history of the

automobile was quietly erased. A century later, electric cars are making a comeback. Fears over pollution and global warming have forced manufacturers to reconsider the electric concept. *A History of Electric Cars* presents for the first time the full story of electric cars and their hybrid cousins. It examines how and why electric cars failed the first time - and why today's car manufacturers must learn the lessons of the past if they are to avoid repeating previous mistakes all over again. The book examines in detail: Early vehicles such as the Lohner-Porsche petrol-electric hybrid of 1901; Key figures in the history of the electric car development such as Henry Ford; Sir Clive Sinclair's plans to build a number of electric vehicles, designed to sit alongside the Sinclair C5; The return of the electric technology to vehicles as diverse as the NASA Lunar Rover, commuting vehicles and supercars; Future developments in electric cars. For the first time the full story of electric cars and their hybrids are examined. The hidden past of the electric automobile is uncovered and its future developments are discussed. Superbly illustrated with 300 colour photographs, many of which are rare and original sketch designs. Nigel Burton has written and lectured on cars and automotive history for more than twenty years.

Converter-Based Dynamics and Control of Modern Power Systems Antonello Monti, Federico Milano, Ettore Bompard, Xavier Guillaud, 2020-10-22 *Converter-Based Dynamics and Control of Modern Power Systems* addresses the ongoing changes and challenges in rotating masses of synchronous generators, which are transforming dynamics of the electrical system. These changes make it more important to consider and understand the role of power electronic systems and their characteristics in shaping the subtleties of the grid and this book fills that knowledge gap. Balancing theory, discussion, diagrams, mathematics, and data, this reference provides the information needed to acquire a thorough overview of resilience issues and frequency definition and estimation in modern power systems. This book offers an overview of classical power system dynamics and identifies ways of establishing future challenges and how they can be considered at a global level to overcome potential problems. The book is designed to prepare future engineers for operating a system that will be driven by electronics and less by electromechanical systems. Includes theory on the emerging topic of electrical grids based on power electronics Creates a good bridge between traditional theory and modern theory to support researchers and engineers Links the two fields of power systems and power electronics in electrical engineering

English as an International Language Farzad Sharifian, 2009-01-08 The rapid global spread of the English language has serious linguistic, ideological, socio-cultural, political, and pedagogical implications as it creates both positive interactions and negative tensions between global and local forces. Accordingly, debate about issues such as the native/non-native divide, the politics of an international language, communication in a Lingua Franca, the choice of a model for ELT, and the link between English and identity(ies) has stimulated scholarly inquiry in an unprecedented way. The chapters in this volume revisit, challenge, and expand upon established arguments and positions regarding the politics, policies, pedagogies, and practices of English as an international language, as well as its sociolinguistic and socio-psychological complexities.

Energy and Climate Alexandre Rojey, 2009-03-30 Despite global concerns over dwindling resources, climate change and carbon dioxide emissions, fossil fuels still account for more than 80% of the world's energy demands. As resources diminish and demand increases from rapidly developing nations such as China and India, the threat to both our environment and the security of our energy supply continues to grow. There is an immediate need to move towards a clean and more sustainable energy model, and this transition will require unprecedented innovation. *Energy & Climate: How to achieve a successful energy transition* covers all the technology options available and summarises key information from the International Energy Agency and other leading organisations, providing a detailed technological roadmap for this transition which aims to avoid both ecological and economic disaster. Topics that are analysed and discussed in this edition are: More energy efficient technologies New developments in fossil fuels Renewable energy sources such as solar and wind energy and biofuels Hydrogen as an energy vector New energy storage systems Hybrid vehicles Capture and long-term storage of carbon dioxide Written and translated by the former Director for Sustainable

Development at IFP, Energy & Climate: How to achieve a successful energy transition is an essential introductory book for scientists and researchers working in energy and climate-related topics as well as all those interested in how to manage a sustainable energy supply while still reducing harmful carbon dioxide emissions.

Biolubricants Jan C.J. Bart,Emanuele Gucciardi,Stefano Cavallaro,2012-12-18 Lubricants are essential in engineering, however more sustainable formulations are needed to avoid adverse effects on the ecosystem. Bio-based lubricant formulations present a promising solution. Biolubricants: Science and technology is a comprehensive, interdisciplinary and timely review of this important subject. Initial chapters address the principles of lubrication, before systematically reviewing fossil and bio-based feedstock resources for biodegradable lubricants. Further chapters describe catalytic, (bio) chemical functionalisation processes for transformation of feedstocks into commercial products, product development, relevant legislation, life cycle assessment, major product groups and specific performance criteria in all major applications. Final chapters consider markets for biolubricants, issues to consider when selecting and using a lubricant, lubricant disposal and future trends. With its distinguished authors, Biolubricants: Science and technology is a comprehensive reference for an industrial audience of oil formulators and lubrication engineers, as well as researchers and academics with an interest in the subject. It provides an essential overview of scientific and technological developments enabling the cost-effective improvement of biolubricants, something that is crucial for the green future of the lubricant industry. A comprehensive, interdisciplinary and timely review of bio-based lubricant formulations Addresses the principles of lubrication Reviews fossil and bio-based feedstock resources for biodegradable lubricants

Computer-Assisted Language Learning Glenn Stockwell,2012-02-02 Computer-assisted language learning (CALL) is an approach to teaching and learning languages that uses computers and other technologies to present, reinforce, and assess material to be learned, or to create environments where teachers and learners can interact with one another and the outside world. This book provides a much-needed overview of the diverse approaches to research and practice in CALL. It differs from previous works in that it not only surveys the field, but also makes connections to actual practice and demonstrates the potential advantages and limitations of the diverse options available. These options are based squarely on existing research in the field, enabling readers to make informed decisions regarding their own research in CALL. This essential text helps readers to understand and embrace the diversity in the field, and helps to guide them in both research and practice.

An Independent Man Eddie Jordan,2011-02-24 The hugely entertaining, and extremely candid, autobiography of one of the most colourful characters in motor sport Eddie Jordan gave Michael Schumacher his first drive, and helped groom a whole series of drivers early in their careers, including Damon Hill and Johnny Herbert. But he funded his first move into motor sport by selling smoked salmon well past its sell-by date to rugby fans leaving Lansdowne Road; when stopped for speeding by a policeman, he ended up selling him his car. Jordan set up his own team, and moved into Formula One at the end of the 1980s. It wasn't long before the team began to pick up podium finishes, and in 1998 won its first race - a remarkable achievement on a comparatively small budget. The following year was even better, but sadly this was to be the peak, as the search for more finance and legal battles with sponsors hit hard. Eventually, in January 2005 he sold the team. AN INDEPENDENT MAN goes behind the scenes to reveal the true personalities of the drivers Jordan worked with, and his battles with Bernie Ecclestone. It shows how, when so much money is involved, nothing is ever simple. His has been a life lived to the full, and his account is packed full of superb stories, colourful adventures and revealing tales.

Handbook of Energy Economics and Policy Alessandro Rubino,Alessandro Sapio,Massimo La Scala,2021-05-01 Handbook of Energy Economics and Policy: Fundamentals and Applications for Engineers and Energy Planners presents energy engineers and managers with analytical skills and

concepts that enable them to apply simple economic logic to understand the interrelations between energy technologies, economics, regulation and governance of the industry. Sections cover the origins, types and measurement of energy sources, transportation networks, and regulatory and policy issues on electricity and gas at a global level, new economic and policy issues, including innovation processes in the energy industry and economic and policy implications. Final sections cover state-of-the-art methods for modeling and predicting the dynamics of energy systems. Its unique approach and learning path makes this book an ideal resource for energy engineering practitioners and researchers working to design, develop, plan or deploy energy systems. Energy planners and policymakers will also find this to be a solid foundation on which to base decisions. Presents key-concepts and their interrelation with energy technologies and systems in a clear way for ready application during planning and deployment of energy technologies and systems Includes global case studies covering a wide array of energy sources and regulatory models Explores methodologies for modeling and forecasting the impacts of energy technologies and systems, as well as their costs and possible business models

2004 FIA Formula One World Championship Bruce Jones,2004 This is an indispensable guide for all motor racing fans. Combining a preview of the forthcoming year with a race-by-race account of the 2004 Grand Prix season, it gives information on all the top drivers, leading teams and significant technological advances. Martin Brundle provides the foreword.

Spectral Line Formation John T. Jefferies,1968 The purpose of this book is to discuss certain aspects of the theory of the formation and analysis of the line spectrum of a hot gas. The underlying motivation for most of the studies discussed here lies in a desire to develop a physically sound procedure for interpreting the line spectrum of a stellar atmosphere ; correspondingly, the major emphasis is given to problems encountered in astrophysics.

The Maltreatment of Children S.M. Smith,2012-12-06 The maltreatment of children is an issue that has always been with us and civilized societies provide a range of services both social and medical to care for the children and families afflicted. In recent years, greater attention has been drawn to the medical aspects by competent authorities in the fields of forensic medicine, forensic psychiatry, epidemiological psychiatry, child psychiatry and family psychiatry; as well as the social aspects by those child welfare and child care agencies who have the difficult and distasteful task of removing children, with the help of the courts, from parents who can abuse them and are not able to care for them adequately. A multitude of social agencies, whose range of activities involve both the care and, where possible, the social betterment of afflicted families are now involved. Not least in importance is an increase in our global knowledge to help in the prevention or better treatment of these problems. This means more information on familial and genetic factors in human central nervous system development in its broadest sense. This would include how the central nervous system originates, mediates and controls the build up, speed of development and impulsive release, mastery and direction of aggressive drives and impulses. Very little is so far known about these factors.
