Professional Search Engine Optimization with PHP Cristian Darie, Jaimie Sirovich, 2007-04-18 Maybe you're a great programmer or IT professional, but marketing isn't your thing. Or perhaps you're a tech-savvy search engine marketer who wants a peek under the hood of a search engine optimized web site. Search engine marketing is a field where technology and marketing are both critical and interdependent, because small changes in the implementation of a web site can make you or break you in search engine rankings. Furthermore, the fusion of technology and marketing know-how can create web site features that attract more visitors. The mission of this book is to help web developers create web sites that rank well with the major search engines, and to teach search engine marketers how to use technology to their advantage. We assert that neither marketing nor IT can exist in a vacuum, and it is essential that they not see themselves as opposing forces in an organization. They must work together. This book aims to educate both sides in that regard.

Generally Fuzzy Technology, Artificial Neural Nets and Evolutionary Computing are considered to be such approaches. The Editors have assembled new contributions in the areas of fuzzy sets, neural sets and machine learning, as well as combinations of them (so called hybrid methods) in the first part of the book. The second part of the book is dedicated to applications in the areas that are considered to be most relevant to Computational Intelligence.

Visual Psychophysics Zhong-Lin Lu, Barbara Doshier, 2013-10-11 A comprehensive treatment of the skills and techniques needed for visual psychophysics, from basic tools to sophisticated data analysis. Vision is one of the most active areas in biomedical research, and visual psychophysical techniques are a foundational methodology for this research enterprise. Visual psychophysics, which studies the relationship between the physical world and human behavior, is a classical field of study that has widespread applications in modern vision science. Bridging the gap between theory and practice, this textbook provides a comprehensive treatment of visual psychophysics, teaching not only basic techniques but also sophisticated data analysis methodologies and theoretical approaches. It begins with practical information about setting up a vision lab and goes on to discuss the creation, manipulation, and display of visual images; timing and integration of displays with measurements of brain activities and other relevant techniques; experimental designs; estimation of behavioral functions; and examples of psychophysics in applied and clinical settings. The book's treatment of experimental designs presents the most commonly used psychophysical paradigms, theory-driven psychophysical experiments, and the analysis of these procedures in a signal-detection theory framework. The book discusses the theoretical underpinnings of data analysis and scientific interpretation, presenting data analysis techniques that include model fitting, model comparison, and a general framework for optimized adaptive testing methods. It includes many sample programs in Matlab with functions from Psychtoolbox, a free toolbox for real-time experimental control. Once students and researchers have mastered the material in this book, they will have the skills to apply visual psychophysics to cutting-edge vision science.

M2/M3 Bradley David Doyle, 2018-11-30 Through hundreds of color photos, the bulk previously unpublished, *Images of War: M2 Bradley* explores America's premier Infantry Fighting Vehicle in an unprecedented level of detail. Go inside and out the modern-day icon, then ride it into battle through they myriad of photos presented in this book. See why Bradley remains one of the most formidable armored combat vehicles of its class, even as it logs over 35 years of service. The Bradley Fighting Vehicle, made famous through extensive media coverage of the wars in Iraq and Afghanistan, is given an in-depth examination in this brand new volume. Drawing on the lessons learned in Vietnam, the Bradley was built to provide a highly mobile platform from which infantry could be inserted into the battlefield, and from which the infantry could operate. Its use soon expanded to that of a scout vehicle with anti-tank capability. Despite initial criticism from Congress, the Bradley proved itself very capable on the battlefield, destroying more Iraqi armored vehicles than did the famed Abrams tanks. Through extensive photo coverage, most never before published, this book explores the many variations of the

Bradley, including the heavily armed M270 Multiple Launch Rocket System.

American-Type Options Dmitrii S. Silvestrov, 2015-03-03 The book gives a systematical presentation of stochastic approximation methods for discrete time Markov price processes. Advanced methods combining backward recurrence algorithms for computing of option rewards and general results on convergence of stochastic space skeleton and tree approximations for option rewards are applied to a variety of models of multivariate modulated Markov price processes. The principal novelty of presented results is based on consideration of multivariate modulated Markov price processes and general pay-off functions, which can depend not only on price but also an additional stochastic modulating index component, and use of minimal conditions of smoothness for transition probabilities and pay-off functions, compactness conditions for log-price processes and rate of growth conditions for pay-off functions. The volume presents results on structural studies of optimal stopping domains, Monte Carlo based approximation reward algorithms, and convergence of American-type options for autoregressive and continuous time models, as well as results of the corresponding experimental studies.

Metamorph: Vectors Nanni Baltzer, 2004 Metamorfosi è una parola chiave della nostra cultura figurativa: le forme prodotte da tecnologie meccaniche sono fisse, stabili e solide; le forme prodotte da tecnologie elettroniche sono volubili; cambiano e si trasformano incessantemente, talvolta per scelta, talvolta per caso. Il prodotto finale di un processo digitale non è mai un prodotto finito. È sempre l'epifania occasionale ed effimera di un processo algoritmico che può generarne altri, in numero illimitato e tutti diversi, intenzionalmente o imprevedibilmente. Il futuro approda a Venezia con una serie di quaranta sale-concerti, con edifici basati su superfici piegate e incurvate e con iperstrutture di grande potenziale.
