## **Memory, Amnesia, and the Hippocampal System**

Neal J. Cohen, Howard Eichenbaum, 1993

In this sweeping synthesis, Neal J. Cohen and Howard Eichenbaum bring together converging findings from neuropsychology, neuroscience, and cognitive science that provide the critical clues and constraints for developing a more comprehensive understanding of memory. Specifically, they offer a cognitive neuroscience theory of memory that accounts for the nature of memory impairment exhibited in human amnesia and animal models of amnesia, that specifies the functional role played by the hippocampal system in memory, and that provides further understanding of the componential structure of memory. The authors' central thesis is that the hippocampal system mediates a capacity for declarative memory, the kind of memory that in humans supports conscious recollection and the explicit and flexible expression of memories. They argue that this capacity emerges from a representation of critical relations among items in memory, and that such a relational representation supports the ability to make inferences and generalizations from memory, and to manipulate and flexibly express memory in countless ways. In articulating such a description of the fundamental nature of declarative representation and of the mnemonic capabilities to which it gives rise, the authors' theory constitutes a major extension and elaboration of the earlier procedural-declarative account of memory. Support for this view is taken from a variety of experimental studies of amnesia in humans, nonhuman primates, and rodents. Additional support is drawn from observations concerning the neuroanatomy and neurophysiology of the hippocampal system. The data taken from divergent literatures are shown to converge on the central theme of hippocampal involvement in

declarative memory across species and across behavioral paradigms.

**Sports-Related Concussions in Youth** National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Sports-Related Concussions in Youth, 2014-02-04 In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. *Sports-Related Concussions in Youth: Improving the Science, Changing the Culture* reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. *Sports-Related Concussions in Youth* finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-

term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

### **Textbook of Neural Repair and Rehabilitation**

*French Tanks of World War I* Steven J.

Zaloga, 2011-12-20 This title examines the emergence of the first modern tank, the Renault FT. It is a little known fact that France fielded more tanks in World War I than any other army. However, France's early tanks suffered from poor mobility and armor compared to their contemporaries. Indeed, their initial use on the Chemin des Dames in 1917 was a bloody fiasco. In spite of initial set-backs, the French

army redeemed its reputation with the Renault FT. The Renault FT pioneered the modern tank design, with armament in a revolutionary central turret and the engine in the rear. More importantly, the Renault was designed to be cheap and easy to manufacture. Discover the history of the early French armor developments and their triumphant new design, the Renault FT, that helped to turn the tide of war in the favor of the Allies.

*Perinatal Neuropathology* Mirna Lechpammer, Marc Del Bigio, Rebecca Folkerth, 2021 1 Clinical history, clinical correlations with placental pathology and prematurity The initial steps in the process of perinatal nervous system evaluation, namely the planning of the optimal approach and choice of samples to be obtained, are driven by the clinical context. Of key importance are the following data: a. Gestational age at time of demise (if stillborn); or gestational age and postnatal age (if liveborn), for comparison with normative standards of development (see Appendix); b. State of maternal health (age, parity, pre-existing medical conditions or ones appearing during gestation or around the time of delivery, exposure to medications/toxins/infections), and of health of siblings or other family members: - Concerns for inherited (i.e., genetic) conditions, metabolic disorders, congenital infections, etc., may indicate the need for special testing; c. Details of prenatal course, including any imaging, amniocentesis, or monitoring: - Prenatal imaging modalities most commonly consist of transabdominal ultrasonography, generally done at the time of the first prenatal visit (to confirm pregnancy) or more usually in the mid-second-trimester for detection of fetal or placental anomalies--

**Tanks in the Great War, 1914-1918** John Frederick Charles Fuller, 1920 This book presents the history of the British Tank Corps and the history of Great Britain's tanks.

The author summarizes the campaigns of World War I emphasizing the role of the tanks during each of the battles.

**Artificial You** Susan Schneider, 2021-04-13 Humans may not be Earth's most intelligent beings for much longer: the world champions of chess, Go, and Jeopardy! are now all AIs. Given the rapid pace of progress in AI, many predict that it could advance to human-level intelligence within the next several decades. From there, it could quickly outpace human intelligence. What do these developments mean for the future of the mind? In *Artificial You*, Susan Schneider says that it is inevitable that AI will take intelligence in new directions, but urges that it is up to us to carve out a sensible path forward. As AI technology turns inward, reshaping the brain, as well as outward, potentially creating machine minds, it is crucial to beware. Homo sapiens, as mind designers, will be playing with tools they do not understand how to use: the self, the mind, and consciousness. Schneider argues that an insufficient grasp of the nature of these entities could undermine the use of AI and brain enhancement technology, bringing about the demise or suffering of conscious beings. To flourish, we must grasp the philosophical issues lying beneath the algorithms. At the heart of her exploration is a sober-minded discussion of what AI can truly achieve: Can robots really be conscious? Can we merge with AI, as tech leaders like Elon Musk and Ray Kurzweil suggest? Is the mind just a program? Examining these thorny issues, Schneider proposes ways we can test for machine consciousness, questions whether consciousness is an unavoidable byproduct of sophisticated intelligence, and considers the overall dangers of creating machine minds.--Provided by publisher.

*Polyurethane Elastomers* Cristina Prisacariu, 2011-07-03

A comprehensive account of the physical / mechanical behaviour of polyurethanes (PU's) elastomers, films and blends of variable crystallinity. Aspects covered include the elasticity and inelasticity of amorphous to crystalline PUs, in relation to their sensitivity to chemical and physical structure. A study is made of how aspects of the constitutive responses of PUs vary with composition: the polyaddition procedure, the hard segment, soft segment and chain extender (diols and diamines) are varied systematically in a large number of systems of model and novel crosslinked and thermoplastic PUs. Results will be related to: microstructural changes, on the basis of evidence from x-ray scattering (SAXS and WAXS), and also dynamic mechanical analyses (DMA), differential scanning calorimetry (DSC) and IR dichroism. Inelastic effects will be investigated also by including quantitative correlations between the magnitude of the Mullins effect and the fractional energy dissipation by hysteresis under cyclic straining, giving common relations approached by all the materials studied. A major structural feature explored is the relationship between the nature of the hard segment (crystallising or not) and that of the soft segments. Crystallinity has been sometimes observed in the commercial PUs hard phase but this is usually limited to only a few percent for most hard segment structures when solidified from the melt. One particular diisocyanate, 4,4'-dibenzyl diisocyanate (DBDI) that, in the presence of suitable chain extenders ( diols or diamines), gives rise to significant degrees of crystallinity [i-iii] and this is included in the present work. Understanding the reaction pathways involved, in resolving the subtle morphological evolution at the nanometre level, and capturing mathematically the complex, large-deformation nonlinear viscoelastic mechanical behaviour are assumed to bring new important

insights in the world basic research in polyurethanes and towards applied industrial research in this area.

**Tank Hunter** Craig Moore, 2017-11-08 The First World War's fierce battles saw the need to develop military technology beyond anything previously imagined: as exposed infantry and cavalry were mowed down by relentless machine-gun attacks, so tanks were developed. Here author Craig Moore presents every First World War tank, from the prototype 'Little Willie', through the French heavy tanks to the German light tank. He gives a focused history of the development of this game-changing vehicle and the engagements it was used in – vital battles such as the Somme and Cambrai. Stunningly illustrated in full colour throughout, Tank Hunter: World War One provides historical background, facts and figures for each First World War tank as well as the locations of any surviving examples, giving you the opportunity to become a Tank Hunter yourself.

Fetal and Neonatal Brain Injury David K.

Stevenson, William E. Benitz, Philip Sunshine, Susan R. Hintz, Maurice L. Druzin, 2017-12-21 Improvements in the detection of fetal and neonatal brain injuries, advances in our understanding of the pathophysiology, cellular and molecular bases of encephalopathy, and new treatment options have all combined to produce significant changes in the management of neonatal brain disorders in the past few years. This new edition of Fetal and Neonatal Brain Injury brings the reader fully up to date with all advances in clinical management and outcome assessment. Updated material includes inflammation focusing in particular on chorioamnionitis and fetal brain injury; genetic brain injury; and expanded sections on cholestasis, diabetes, and thyroid disease. An updated, highly illustrated chapter on structural and functional imaging of the fetal and neonatal brain is also included. An outstanding international team of highly

experienced neonatologists and maternal-fetal medicine clinicians have produced a practical, authoritative clinical text that gives clear management advice to all clinicians involved in the treatment of these patients.

**Tanks** Richard Ogorkiewicz, 2015-02-20 From an internationally acclaimed expert in the field comes a detailed, analytical and comprehensive account of the worldwide evolution of tanks, from their inception a century ago to the present day. With new ideas stemming from the latest academic research, this study presents a reappraisal of the development of tanks and their evolution during World War I and how the surge in technological development during World War II and the subsequent Cold War drove developments in armour in Europe and America, transforming tanks into fast, resilient and powerful fighting machines. From the primitive, bizarre-looking Mark V to the Matilda and from the menacing King Tiger to the superlative M1 Abrams, Professor Ogorkiewicz shows how tanks gradually acquired the enhanced capabilities that enabled them to become what they are today – the core of combined-arms, mechanized warfare.

**Division Street** Robert Gumpert, 2022 In 2016 the Super Bowl came to San Francisco. The unhoused were moved to Division Street where, officials hoped, they would be 'invisible'. Amid the unlimited wealth of that 'super' week, the unhoused were crowded together in tents or sleeping rough on the ground. No facilities and no promises of permanent housing were given. The voices of the unhoused on Division Street are integral to this project. Through photographs, first-person storytelling, messages left on the street, media headlines and politicians' characterizations we see the invisible.

*A Multidisciplinary Approach to Capability in Age and Ageing* Hanna Falk Erhag, Ulrika Lagerlöf Nilsson, Therese

Rydberg Sterner, Ingmar Skoog, 2022-01-10 This open access book provides insight on how to interpret capability in ageing – one's individual ability to perform actions in order to reach goals one has reason to value – from a multidisciplinary approach. With for the first time in history there being more people in the world aged 60 years and over than there are children below the age of 5, the book describes this demographic trends as well as the large global challenges and important societal implications this will have such as a worldwide increase in the number of persons affected with dementia, and in the ratio of retired persons to those still in the labor market. Through contributions from many different research areas, it discussed how capability depends on interactions between the individual (e.g. health, genetics, personality, intellectual capacity), environment (e.g. family, friends, home, work place), and society (e.g. political decisions, ageism, historical period). The final chapter summarizes the differences and similarities in these contributions. As such this book provides an interesting read for students, teachers and researchers at different levels and from different fields interested in capability and multidisciplinary research.

Joseph Woicik, 2015-12-26 This book provides the first complete and up-to-date summary of the state of the art in HAXPES and motivates readers to harness its powerful capabilities in their own research. The chapters are written by experts. They include historical work, modern instrumentation, theory and applications. This book spans from physics to chemistry and materials science and engineering. In consideration of the rapid development of the technique, several chapters include highlights illustrating future opportunities as well.

Iron Arm John Joseph Timothy Sweet, 2006-12 - A detailed study of Italy's long-ignored tank force - Explores the intersection of technology, war, and society in Mussolini's Italy - Second only to Germany in number of tank divisions, first to create an armored corps Though overshadowed by Germany's more famous Afrika Korps, Italian tanks formed a large part of the Axis armored force that the Allies confronted--and ultimately defeated--in North Africa in the early years of World War II. Those tanks were the product of two decades of debate and development as the Italian military struggled to produce a modern, mechanized army in the aftermath of World War I. For a time, Italy stood near the front of the world's tank forces--but once war came, Mussolini's iron arm failed as an effective military force. This is the story of its rise and fall.

*World Encyclopaedia of the Tank* Christopher Chant, 2002 Combination of colour photographs, specially-drawn artwork and technical specifications.

**Marijuana and Madness** David Castle, Robin Murray, 2004-05-27 This book provides a comprehensive overview of the psychiatry and neuroscience of Cannabis sativa (marijuana), with particular emphasis on psychotic disorders. It outlines developments in our understanding of the human cannabinoid system, and links this knowledge to clinical and epidemiological facts about the impact of cannabis on mental health. Clinically focused chapters review not only the direct psychomimetic properties of cannabis, but also the impact consumption has on the courses of evolving or established mental illness such as schizophrenia. A number of controversial issues are critically explored, including whether a discrete 'cannabis psychosis' exists, and whether cannabis can actually cause schizophrenia. Effects of cannabis on mood, notably depression, are reviewed, as are its effects on cognition.

This book will be of interest to all members of the mental health team, as well as to neuroscientists and those involved in drug and alcohol research.

4th International Conference on Internet of Things and Connected Technologies (ICIoTCT), 2019 Neeta Nain, Santosh Kumar Vipparthi, 2020-02-14 This book presents the proceedings of the 4th International Conference on Internet of Things and Connected Technologies (ICIoTCT), held on May 9-10, 2019, at Malaviya National Institute of Technology (MNIT), Jaipur, India. The Internet of Things (IoT) promises to usher in a revolutionary, fully interconnected “smart” world, with relationships between objects and their environment and objects and people becoming more tightly intertwined. The prospect of the Internet of Things as a ubiquitous array of devices bound to the Internet could fundamentally change how people think about what it means to be “online”. The ICIoTCT 2019 conference provided a platform to discuss advances in Internet of Things (IoT) and connected technologies, such as various protocols and standards. It also offered participants the opportunity to interact with experts through keynote talks, paper presentations and discussions, and as such stimulated research. With the recent adoption of a variety of enabling wireless communication technologies, like RFID tags, BLE, ZigBee, embedded sensor and actuator nodes, and various protocols such as CoAP, MQTT and DNS, IoT has moved on from its infancy. Today smart sensors can collaborate directly with machines to automate decision-making or to control a task without human involvement. Further, smart technologies, including green electronics, green radios, fuzzy neural approaches, and intelligent signal processing techniques play an important role in the development of the wearable healthcare devices.

### **Designing the T-34** Peter Samsonov,2019-12-27

When the German army launched Operation Barbarossa – the invasion of the Soviet Union – on June 22, 1941, it was expecting to face and easily defeat outdated and obsolete tanks and for the most part it did, but it also received a nasty shock when it came up against the T-34. With its powerful gun and sloped armour, the T-34 was more than a match for the best German tanks at that time and the Germans regarded it with awe. German Field Marshal von Kleist, who commanded the latter stages of Barbarossa, called it “the finest tank in the world”. Using original wartime documents author and historian Peter Samsonov, creator of the Tank Archives blog, explains how the Soviets came to develop what was arguably the war’s most revolutionary tank design.

### **Neuropathology of Neurodegenerative Diseases**
