Electrochemistry H R Thirsk,2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued.

Essays on Paula Rego Maria Manuel Lisboa,2020-10-09 In these powerful and stylishly written essays, Maria Manuel Lisboa dissects the work of Paula Rego, the Portuguese-born artist considered one of the greatest artists of modern times. Focusing primarily on Rego's work since the 1980s, Lisboa explores the complex relationships between violence and nurturing, power and impotence, politics and the family that run through Rego's art. Taking a historicist approach to the evolution of the artist's work, Lisboa embeds the works within Rego's personal history as well as Portugal's (and indeed other nations') stories, and reveals the interrelationship between political significance and the raw emotion that lies at the heart of Rego's uncompromising iconographic style. Fundamental to Lisboa's analysis is an understanding that apparent opposites - male and female, sacred and profane, aggression and submissiveness - often co-exist in Rego's work in a way that is both disturbing and destabilising. This collection of essays brings together both unpublished and previously published work to make a significant contribution to scholarship about Paula Rego. It will also be of interest to scholars and students of contemporary painting, Portuguese and British feminist art, and the political and ideological aspects of the visual arts. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. Autism Michael Rutter, Eric Schopler,2012-12-06 This volume aims to provide the reader with an up-to-date account of knowledge, research, education, and clinical practice in the field of autism, from an international perspective. The emphasis throughout is on the growing points of knowledge and on the new developments in practice. We have tried to keep a balance between the need for rigorous research and systematic evaluation and the importance of expressing new ideas and concepts so that they may influence thinking at a stage when questions are being formulated and fresh approaches to treatment are being developed. The book had its origins in the 1976 International Symposium on Autism held in St. Gallen, Switzerland but it is not in any sense a proceedings of that meeting. Most papers have been extensively rewritten to provide a fuller coverage of the topic and also to take account of the issues raised at the meeting. Discussion dialogues have been revised and restructured to stand as self-contained chapters. Many significant contributions to the conference have not been included in order to maintain the balance of a definitive review; however a few extra chapters have been added to fill crucial gaps. We hope the result is a vivid picture of the current state of the art. As editors we have been most impressed by the advances since the 1970 international conference in London.

The King Years Taylor Branch,2013-01-08 The essential moments of the Civil Rights Movement are set in historical context by the Pulitzer Prize-winning author of the magisterial *America in the King Years* trilogy—*Parting the Waters*; *Pillar of Fire*; and *At Canaan's Edge*. Taylor Branch, author of the Pulitzer Prize-winning *America in the King Years* trilogy, presents selections from his monumental work that recount the essential moments of the Civil Rights Movement. A masterpiece of storytelling on race and democracy, violence and nonviolence, *The King Years* delivers riveting tales of everyday heroes whose stories inspire us still. Here is the full sweep of an era that transformed America and continues to offer crucial lessons for today's world. This vital primer amply fulfills Branch's dedication: "For students of freedom and teachers of history."

Bodies of Evidence Paul Sant Cassia,2005 Over 2,000 people went missing in Cyprus between 1963 & 1974. This work examines how both communities face the need to mourn without a body, nor even any certain knowledge of what has happened to their loved ones.

Ionic Interactions in Natural and Synthetic Macromolecules Alberto Ciferri, Angelo Perico,2012-01-04 This book is a comprehensive study of the subject of ionic interactions in macromolecules. The first parts of the book review and analyze the conventional treatments of fixed charges (e.g. in polyelectrolytes and polyampholytes), including screening and condensation by mobile ions. The interaction of ions with less polar sites on the macromolecule (e.g. amide bonds), and the origin of the lyotropic effects (focusing on binding versus condensation) will also be extensively addressed. The book also explores complex micellar organizations involving charged macromolecules (e.g. DNA) and low-molecular-weight ampholytes and strong protein associations. The resulting structures are relevant to a variety of functional biological systems and synthetic analogs. The contribution of electrostatic and hydrophobic interaction to the stability of proteins and other supramolecular structures will also be analyzed. There are chapters on applications such as deionization and cosmetic formulation. This 21-chapter book is divided into three sections: Fundamentals Mixed Interactions Functions and Applications

An Analysis of Niccolò Machiavelli's The Prince Riley Quinn, Ben Worthy, 2017-07-05 How should rulers rule? What is the nature of power? These questions had already been asked when Niccolò Machiavelli wrote *The Prince* in 1513. But what made his thinking on the topic different was his ability to interpret evidence: to look at old issues and find new meaning within them. Many of Machiavelli's contemporaries thought that God would make sure morality was rewarded. To these people, it was inevitable that ethical individuals would enjoy success in this world and attain paradise in the next. Machiavelli was not so sure. He used the evidence of history to prove that people who can lie, cheat and murder tend to succeed. Machiavelli concluded that three main factors affect a political leader's success or failure. In doing so, he reached an entirely new understanding of the meaning of his evidence. Machiavelli argued that behaving in a moral way actually hinders a ruler. If everyone acted morally, he reasoned, then morals would not be a disadvantage. But in a world in which leaders are willing to be ruthless, a moral leader would make both themselves and their state vulnerable. Machiavelli's novel interpretation posits that morals can make a leader hesitate, and this could cost them – and the citizens they are responsible for – everything.

Case Studies in Systemic Sclerosis RICHARD SILVER, Christopher P. Denton, 2011-08-14 *Case Studies in Systemic Sclerosis* deals specifically with Systemic Sclerosis in a case study format. Each case presentation includes illustrative figures, a discussion of the pathophysiology relevant to the case, a discussion of management that is both evidence-based and expert opinion-based and several key references for further reading. With its easy-to-use format, this book presents multiple different manifestations of Systemic Sclerosis to a wide range of readers. Because this disease has a broad range of systemic features, *Case Studies in Systemic Sclerosis* is a valuable reference tool not only to the community of rheumatologists (trainees, academic and private practice rheumatologists) and dermatologists, but also potentially to internists, gastroenterologists, pulmonologists, cardiologists and nephrologists.

Advances in Concentrating Solar Thermal Research and Technology Manuel Blanco, Lourdes Ramirez Santigosa, 2016-11-10 After decades of research and development, concentrating solar thermal (CST) power plants (also known as concentrating solar power (CSP) and as Solar Thermal Electricity or STE systems) are now starting to be widely commercialized. Indeed, the IEA predicts that by 2050, with sufficient support over ten percent of global electricity could be produced by concentrating solar thermal power plants. However, CSP plants are just but one of the many possible applications of CST systems. *Advances in Concentrating Solar Thermal Research and Technology* provides detailed information on the latest advances in CST systems research and technology. It promotes a deep understanding of the challenges the different CST technologies are confronted with, of the research that is taking place worldwide to address those challenges, and of the impact that the innovation that this research is fostering could have on the emergence of new CST components and concepts. It is anticipated that these developments will substantially increase the cost-competitiveness of commercial CST solutions and reshape the technological landscape of both CST technologies and the CST industry. After an introductory chapter, the next three parts of the book focus on key CST plant components, from mirrors and receivers to thermal storage. The final two parts of the book address operation and control and innovative CST system concepts. Contains authoritative reviews of CST research taking place around the world Discusses the impact this research is fostering on the emergence of new CST components and concepts that will substantially increase the cost-competitiveness of CST power Covers both major CST plant components and system-wide issues

Sulfated Polysaccharides Miguel Gama, Helena Bonciani Nader, Hugo Alexandre de Oliveira Rocha, 2015 In the post-genomic era, science is still challenged to explain the biosynthesis of complex polysaccharides and glycoconjugates. Unlike nucleic acids and proteins, the information needed for their biosynthesis is not clearly contained to this day within the genome of the various organisms. This means that no biosynthetic code has been revealed yet. As a result, there will be millions of structurally distinct, functional chemical species at the end of their biosynthesis. This book offers an up-to-date view on sulfated polysaccharide structure and function state of the art in different life kingdoms: bacteria, protista, plantae, fungi and animalia. The structure, activities and current thinking on the interplay between these two vital features (as well as ways to study them) are reviewed in the present book. The growing economical interest in sulfated polysaccharides due to their potential biotechnological use in different areas, such as pharmaceutical and food industries, are also commented on. The information within the chapters adds to other prior available literature; the intention of the authors was to extend and further develop the discussions related to glycobiology.

Microplastic in the Environment: Pattern and Process Michael S. Bank, 2021-10-09 This open access book examines global plastic pollution, an issue that has become a critical societal challenge

with implications for environmental and public health. This volume provides a comprehensive, holistic analysis on the plastic cycle and its subsequent effects on biota, food security, and human exposure. Importantly, global environmental change and its associated, systems-level processes, including atmospheric deposition, ecosystem complexity, UV exposure, wind patterns, water stratification, ocean circulation, etc., are all important direct and indirect factors governing the fate, transport and biotic and abiotic processing of plastic particles across ecosystem types. Furthermore, the distribution of plastic in the ocean is not independent of terrestrial ecosystem dynamics, since much of the plastic in marine ecosystems originates from land and should therefore be evaluated in the context of the larger plastic cycle. Changes in species size, distribution, habitat, and food web complexity, due to global environmental change, will likely alter trophic transfer dynamics and the ecological effects of nano- and microplastics. The fate and transport dynamics of plastic particles are influenced by their size, form, shape, polymer type, additives, and overall ecosystem conditions. In addition to the risks that plastics pose to the total environment, the potential impacts on human health and exposure routes, including seafood consumption, and air and drinking water need to be assessed in a comprehensive and quantitative manner. Here I present a holistic and interdisciplinary book volume designed to advance the understanding of plastic cycling in the environment with an emphasis on sources, fate and transport, ecotoxicology, climate change effects, food security, microbiology, sustainability, human exposure and public policy.
