*Perception and Misperception in International Politics* Robert Jervis,2017-05-02 Since its original publication in 1976, *Perception and Misperception in International Politics* has become a landmark book in its field, hailed by the New York Times as the seminal statement of principles underlying political psychology. This new edition includes an extensive preface by the author reflecting on the book's lasting impact and legacy, particularly in the application of cognitive psychology to political decision making, and brings that analysis up to date by discussing the relevant psychological research over the past forty years. Jervis describes the process of perception (for example, how decision makers learn from history) and then explores common forms of misperception (such as overestimating one's influence). He then tests his ideas through a number of important events in international relations from nineteenth- and twentieth-century European history. *Perception and Misperception in International Politics* is essential for understanding international relations today.

*The Frame in Classical Art* Verity Platt,Michael Squire,2017-04-20 The frames of classical art are often seen as marginal to the images that they surround. Traditional art history has tended to view framing devices as supplementary 'ornaments'. Likewise, classical archaeologists have often treated them as tools for taxonomic analysis. This book not only argues for the integral role of framing within Graeco-Roman art, but also explores the relationship between the frames of classical antiquity and those of more modern art and aesthetics. Contributors combine close formal analysis with more theoretical approaches: chapters examine framing devices across multiple media (including vase and fresco painting, relief and free-standing sculpture, mosaics, manuscripts and inscriptions), structuring analysis around the themes of 'framing pictorial space', 'framing bodies', 'framing the sacred' and 'framing texts'. The result is a new cultural history of framing - one that probes the sophisticated and playful ways in which frames could support, delimit, shape and even interrogate the images contained within.

**Some Chemicals Present in Industrial and Consumer Products, Food and Drinking-water** IARC Working Group on the Evaluation of Carcinogenic Risks to Humans,International Agency for Research on Cancer,2013 This volume of the IARC Monographs provides an assessment of the carcinogenicity of 18 chemicals present in industrial and consumer products or food (natural constituents, contaminants, or flavorings) or occurring as water-chlorination by-products. The compounds evaluated include the widely used plasticizer di(2-ethylhexyl) phthalate and the food contaminant 4-methylimidazole. In view of the limited agent-specific information available from epidemiological studies, the IARC Monographs Working Group relied mainly on carcinogenicity bioassays, and mechanistic and other relevant data to evaluate the carcinogenic hazards to humans exposed to these agents.

*Enzyme Handbook* Dietmar Schomburg,Margit Salzmann,2013-11-11 Enzymes are applied in organic synthesis and in analytical chemistry, in industrial production processes of pharmaceuticals and in food processing. Finding a suitable enzyme for a desired transformation or with a defined specificity is not always an easy task. More than 3000 enzymes are well described to date. The *Enzyme Handbook* provides all the information for selecting the proper enzyme to perform defined transformations in a given environment. The *Enzyme Handbook* devotes a variable number of pages for each enzyme, depending on the amount of information available with the EC number as ordering criterion within a volume. Revised data sheets can be released for individual enzymes and newly characterized enzymes and they can easily be sorted into the binders at the appropriate place. Each data sheet is divided into 7 sections: - Nomenclature (EC number, Systematic name, Recommended name, Synonyms, CAS Reg. No.) - Reaction and specificity (Catalysed reaction, Reaction type, Natural substrates, Substrate spectrum, Product spectrum, Inhibitors, Cofactors/prosthetic groups, Metal compounds/salts, Turnover number, Specific activity, KM-value, pH-optimum, pH-range, Temperature optimum, Temperature range) - Enzyme structure (Molecular weight, Subunits, Glyco-/Lipoprotein) - Isolation/Preparation (Source organism, Source tissue, Localisation in source, Purification, Crystallization, Cloned, Renatured) - Stability (pH, Temperature, Oxidation, Organic solvent, General stability information, Storage) - Cross-References (to Structure Data Banks) - Literature references

*Horticultural Reviews* Jules Janick,2011-01-11 *Horticultural Reviews* presents state-of-the-art reviews on topics in horticultural science and technology covering both basic and applied research. Topics covered include the horticulture of fruits, vegetables, nut crops, and ornamentals. These review articles, written by world authorities, bridge the gap between the specialized researcher and the broader community of horticultural scientists and teachers.

**Structure and Dynamics of Polymer and Colloidal Systems** Redouane Borsali,R. Pecora,2002-03-31 This volume is based on lectures given at the NATO-Advanced Study Institute on Structure and Dynamics of Polymer and Colloid Systems held in Les Houches, France from September 14-24, 1999. The meeting arose from a perceived need to bring together scientists studying the polymer and colloid fields. Although these fields are intertwined and share many techniques (e. g. , light, neutron and x-ray scattering), it is remarkable how little the approaches and concepts used by the one field penetrate the other. For instance, the theory of spherical colloids is very highly developed and many of the concepts developed for these systems can be extended to those with non-spherical morphology, such as solutions of rigid rod polymers. In addition, mixtures of polymers and colloids, both in the bulk and at interfaces, are the basis for many industrial products. Methods are now rapidly being developed for understanding the structure and dynamics in polymer/colloid mixtures at the molecular

level, but the point of view of the colloid scientist is often rather different from that of the polymer scientist. The NATO-ASI brought together polymer and colloid scientists, including many young researchers, who presented and discussed recent developments in these fields and the possibilities for cross-fertilization. This volume contains articles on a wide variety of topics at the research forefront of the polymer and colloid fields by some of the world's foremost experts at a level accessible to graduate students, post-docs and researchers.

Casket of Souls Lynn Flewelling, 2012-05-29 The Nightrunners are back in this gripping novel full of Lynn Flewelling's trademark action, intrigue, and richly imagined characters. More than the dissolute noblemen they appear to be, Alec and Seregil are skillful spies, dedicated to serving queen and country. But when they stumble across evidence of a plot pitting Queen Phoria against Princess Klia, the two Nightrunners will find their loyalties torn as never before. Even at the best of times, the royal court at Rhiminee is a serpents' nest of intrigue, but with the war against Plenimar going badly, treason simmers just below the surface. And that's not all that poses a threat: A mysterious plague is spreading through the crowded streets of the city, striking young and old alike. Now, as panic mounts and the body count rises, hidden secrets emerge. And as Seregil and Alec are about to learn, conspiracies and plagues have one thing in common: The cure can be as deadly as the disease.

Amino Acids, Peptides and Proteins J H Jones, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Probabilistic Methods for Algorithmic Discrete Mathematics Michel Habib, 1998-08-19 The book gives an accessible account of modern probabilistic methods for analyzing combinatorial structures and algorithms. Each topic is approached in a didactic manner but the most recent developments are linked to the basic material. Extensive lists of references and a detailed index will make this a useful guide for graduate students and researchers. Special features included: - a simple treatment of Talagrand inequalities and their applications - an overview and many carefully worked out examples of the probabilistic analysis of combinatorial algorithms - a discussion of the exact simulation algorithm (in the context of Markov Chain Monte Carlo Methods) - a general method for finding asymptotically optimal or near optimal graph colouring, showing how the probabilistic method may be fine-tuned to exploit the structure of the underlying graph - a succinct treatment of randomized algorithms and derandomization techniques

*Molecular Mechanism of Congenital Heart Disease and Pulmonary Hypertension* Toshio Nakanishi, H. Scott Baldwin, Jeffrey R. Fineman, Hiroyuki Yamagishi, 2020-02-28 This open access book focuses on the molecular mechanism of congenital heart disease and pulmonary hypertension, offering new insights into the development of pulmonary circulation and the ductus arteriosus. It describes in detail the molecular mechanisms involved in the development and morphogenesis of the heart, lungs and ductus arteriosus, covering a range of topics such as gene functions, growth factors, transcription factors and cellular interactions, as well as stem cell engineering technologies. The book also presents recent advances in our understanding of the molecular mechanism of lung development, pulmonary hypertension and molecular regulation of the ductus arteriosus. As such, it is an ideal resource for physicians, scientists and investigators interested in the latest findings on the origins of congenital heart disease and potential future therapies involving pulmonary circulation/hypertension and the ductus arteriosus.

**Chemical Changes in Food During Processing** Richardson, 2013-11-21 This volume results from the Eighth Basic Symposium held by the Institute of Food Technologists in Anaheim, California on June 8-9, 1984. The theme of the symposium was Chemical Changes in Food during Processing. The speakers included a mix of individuals from academic institutions, governmental agencies, and the food industry. Twenty speakers discussed topics ranging from the basic chemistry relating to food constituents to the more applied aspects of chemical changes in food components during food processing. It was the intent of the organizers to bring together a group of speakers who could address the chemistry of changes in food components during processing from a mechanistic point of view. As a consequence, the proceedings of this symposium emphasize the basic chemistry of

changes in food constituents from a generic perspective which is intended to provide the reader with a background to address more specific problems that may arise.

Thoraco-Abdominal Aorta Roberto Chiesa, Germano Melissano, Alberto Zangrillo, 2011-03-15 The thoraco-abdominal aortic pathology is not uncommon and represents the ultimate challenge for vascular surgeons. The book deals with the newest endovascular and hybrid approaches, together with more traditional surgical strategies. Written by internationally renowned experts in vascular and cardiac surgery, anesthesiology and radiology, the volume provides a very practical approach to the main problems encountered from diagnosis to postoperative care: general principles of aortic diseases, imaging techniques, surgical and anesthesiologic strategies and techniques and other specific problems are some of the topics dealt with. Numerous pictures illustrate the most important diagnostic findings and depict key techniques and strategies. Vascular and cardiac surgeons, anesthesiologists, perfusionists and radiologists will find in this volume useful and updated information for the treatment of this very challenging condition.

Acute Heart Failure Alexandre Mebazaa, Mihai Gheorghiade, Faiez Zannad, Joseph E. Parrillo, 2009-12-24 For many years, there has been a great deal of work done on chronic congestive heart failure while acute heart failure has been considered a difficult to handle and hopeless syndrome. However, in recent years acute heart failure has become a growing area of study and this is the first book to cover extensively the diagnosis and management of this complex condition. The book reflects the considerable amounts of new data reported and many new concepts which have been proposed in the last 3-4 years looking at the epidemiology, diagnostic and treatment of acute heart failure.

Tumor Ablation Eric van Sonnenberg, William McMullen, Luigi Solbiati, 2008-09-08 There is an enormous sense of excitement in the communities of cancer research and cancer care as we move into the middle third of the 21st century. For the first time, there is a true sense of confidence that the tools provided by the human genome project will enable cancer researchers to crack the code of genomic abnormalities that allow tumor cells to live within the body and provide highly specific, virtually non-toxic therapies for the eradication, or at least firm control of human cancers. There is also good reason to hope that these same lines of inquiry will yield better tests for screening, early detection, and prevention of progression beyond curability. While these developments provide a legitimate basis for optimism, many patients will continue to develop cancers and suffer from their debilitating effects, even as research moves ahead. For these individuals, it is imperative that the cancer field make the best possible use of the tools available to provide present day cancer patients with the best chances for cure, effective palliation, or, at the very least, relief from symptoms caused by acute intercurrent complications of cancer. A modality that has emerged as a very useful approach to at least some of these goals is tumor ablation by the use of physical or physiochemical approaches.

Atlas of Lymph Node Pathology Roberto N. Miranda, Joseph D. Khoury, L. Jeffrey Medeiros, 2013-08-13 Atlas of Lymph Node Pathology reviews the histopathology of nodal diseases, illustrating the use of ancillary studies and includes concise discussions of pathogenesis, clinical settings and clinical significance of the pathologic diagnosis. The atlas features an overview of the benign reactive processes secondary to infectious, environmental or unknown insults, as well as relevant illustrations of virtually all primary and secondary neoplasms involving lymph nodes. The atlas also includes macroscopic images of some disorders, tables that help readers understand and comprehend diseases that look alike, and diagnostic algorithms for certain groups of diseases. Authored by highly experienced pathologists, Atlas of Lymph Node Pathology is a valuable resource that illustrates the vast majority of diseases practicing pathologists, clinicians and oncologists are likely to encounter in daily practice.
