**Information Networking** Ilyoung Chong, 2002-09-18 The papers comprising Vol. I and Vol. II were prepared for and presented at the International Conference on Information Networking 2002 (ICOIN 2002), which was held from January 30 to February 1, 2002 at Cheju Island, Korea. It was organized by the KISS (Korean Information Science Society) SIGIN in Korea, IPSJ SIG DPE (Distributed Processing Systems) in Japan, the ITRI (Industrial Technology Research Institute), and National Taiwan University in Taiwan. The papers were selected through two steps, refereeing and presentation review. We selected for the theme of the conference the motto "One World of Information Networking". We did this because we believe that networking will transform the world into one zone, in spite of different ages, countries and societies. Networking is in the main stream of everyday life and affects directly millions of people around the world. We are in an era of tremendous excitement for professionals working in many aspects of the converging networking, information retailing, entertainment, and publishing companies. Ubiquitous communication and computing technologies are changing the world. Online communities, e commerce, e service, and distance learning are a few of the consequences of these technologies, and advanced networking will develop new applications and technologies with global impact. The goal is the creation of a world wide distributed computing system that connects people and appliances through wireless and high bandwidth wired channels with a backbone of computers that serve as databases and object servers. Thus, Vol.

**Computer-Generated Phase-Only Holograms for 3D Displays** Peter Wai Ming Tsang, 2021-01-21 'Phase-only Fresnel holograms,' which can be displayed on a single SLM without the need for lenses or complicated optical accessories, substantially simplifies 3-D holographic display systems. Exploring essential concepts, theories, and formulations of these phase-only Fresnel holograms, this book provides comprehensive coverage of modern methods for generating such holograms, which pave the way for commercial products such as compact holographic projectors, heads-up displays, and data security enhancement. Relevant MATLAB codes are provided for readers to implement and evaluate the theories and formulations of different methods, and can be used as a quick start framework for further research and development. This is a crucial and up-to-date treatment of phase-only Fresnel holograms for students and researchers in electrical and electronic engineering, computer science/engineering, applied physics, information technology, and multimedia technology, as well as engineers and scientists in industry developing new products on 3-D displays

and holographic projection.

**DeWitt Clinton and Amos Eaton** David I. Spanagel, 2014-04-15 David I. Spanagel explores the origins of American geology and the culture that helped give it rise, focusing on Amos Eaton, the educator and amateur scientist who founded the Rensselaer School, and on DeWitt Clinton, the masterful politician who led the movement for the Erie Canal. DeWitt Clinton and Amos Eaton shows how a cluster of assumptions about the peculiar landscape and entrepreneurial spirit of New York came to define the Empire State. Spanagel sheds light on a particularly innovative and fruitful period of interplay among science, politics, art, and literature in American history. New Yorkers' romantic views of natural majesty and ideas about improving the land influenced scientific ideas and other features of contemporary culture. The life of Amos Eaton provides a lens through which readers gain

fresh awareness of scientific knowledge, economic planning, and cultural values during the first half of the nineteenth century. Scientists of the time were fascinated by questions such as: How old is the earth? When did time begin? How might the passage of time have shaped and reshaped the original landscape? In the United States, New Yorkers of the mid-1820s mounted the most concerted effort to find answers to these large questions of natural history. Both geographic conditions and historical forces led Amos Eaton and his wealthy patron Stephen Van Rensselaer to open the Rensselaer School at Troy, New York, in 1826. Eaton thus gave America its first generation of professional scientists, many of whom formed professional organizations and standards of practice still active today. Deeply researched, this book will interest historians of nineteenth-century American arts and science, politics, and technological development.

Virtuosa Organisation Graham Williams, 2015-07-27 This is a book about people in organisations developing love for themselves, others, communities and nature. It offers an opportunity to see afresh, to envisage courageously and to position yourself differently. To bring hearts, minds and wills to bear on the world around us. The life we live inside our organisations influences every other part of our lives. Here is a way to embrace the philosophy and practice of becoming a virtuous organisation and giving a dazzling performance. The book helps you to define where you are in your current experience of your organisation, and how you can shift things within yourself and around you. This is more than an adaptive or compliance process. It is about necessary, compelling and radical change and the authors show how it can, and has been done: Seeing the need. Arriving at the right values. Aligning individual and organisation values Determining appropriate behaviour indicators. Entrenching the values so that they become spontaneously lived virtues The mind-set, methods and techniques used during the process are important in each of these steps, especially the last where precious few

have succeeded. Virtues drawn from the life and works of Leonardo da Vinci, and which span all cultures and generations, illustrate what is possible. The book includes:

1. Choosing and prioritising values
2. How are you living your personal values
3. Are we a congruent organisation?

Chinese Global Exploration In The Pre-columbian Era: Evidence From An Ancient World Map

Sheng-wei Wang, 2023-10-16 How early did the Chinese explore the world? Did the Treasure Fleets, led by Admiral Zheng He, discover many parts of the world before Christopher Columbus? While it is known that Christopher Columbus discovered America and Europe ushered in the Age of Discovery, there is an ongoing debate on the 'unknown' areas depicted in Western maps from the period and earlier. There is agreement among scholars that certain areas seem to have been mapped out prior to the arrival of Western explorers. Chinese Global Exploration in the Pre-Columbian Era: Evidence from an Ancient World Map analyses the world's first modern map — known as Kunyu Wanguo Quantu (KWQ) 坤輿萬國全圖 in Chinese, translated as the 'Complete Geographical Map of All Kingdoms of the World' to demonstrate evidence of Chinese global exploration in the Pre-Columbian era. The map of

concern was first printed by Italian missionary, Matteo Ricci in 1602, and has been purported to be of entirely European origin, based on Ricci's former maps which he had brought to China in 1582. This book, thus, seeks to be transformational in presenting essential new insights on Pre-Columbian world history and Chinese global exploration, moving away from the norm of the studies of geography and cartography by:

**River. Space. Design** Martin Prominski, Antje Stokman, Daniel Stimberg, Hinnerk Voermanek, Susanne Zeller, Katarina Bajc, Nengshi Zheng, 2023-03-20 Urban riverbanks are attractive locations and highly prized recreational environments. However, they must meet the requirements of flood control, open space design and ecology at the same time, often a challenging task for the designer. This book is the product of extensive research that identified some 60 best-practice examples and subjected them to a comparative analysis. The result is a systematic catalog of effective strategies and innovative design tools that provides readers with an inspiring overview of the broad spectrum of design possibilities for river spaces. Each project is illustrated with photographs taken especially for the book and each design strategy and tool is explained by diagrams. This revised edition introduces ten new case studies chiefly from North America.

Global Pandemics and Epistemic Crises in Psychology Martin Dege, Irene Strasser, 2021-07-22 Using COVID-19 as a base, this groundbreaking book brings together several renowned scholars to explore the concept of crisis, and how this global event has shaped the discipline of psychology. It engages directly with the challenges that psychology continues to face when theorizing societal issues of gender, race, class, history, and culture, while not disregarding lived experiences. This edited volume offers a set of pathways to rethink psychology beyond its current scope and history to become more apt to the conditions, needs, and demands of the 21st century. The book explores

topics like resilience, interpersonal relationships, mistrust in the government, and access to healthcare. Dividing the book into three distinct sections, the contributors first examine the current crisis within psychology, then go on to explore how psychology theorizes the subject and the other in a social world of perpetual political, economic, cultural, and social crises, and lastly consider the role of crises in the creation of new theorizing. This is essential reading for advanced undergraduate and postgraduate students of theoretical and philosophical psychology, social psychology, community psychology, and developmental psychology.

**How Mechanics Shaped the Modern World** David Allen, 2013-09-24 This unique book presents a nontechnical view of the history of mechanics, from the Big Bang to present day. The impact of mechanics on the evolution of a variety of subjects is vividly illustrated, including astronomy, geology, astrophysics, anthropology, archeology, ancient history, Renaissance art, music, meteorology, modern structural engineering, mathematics, medicine, warfare, and sports. While enormous in scope, the subject matter is covered (with ample photographic support) at a level designed to capture the interest of both the learned and the curious. The book concludes with a creative and thoughtful examination of the current state of mechanics and possibilities for the future of mechanics.

**Materials Selection in Mechanical Design** Michael F. Ashby, 2016-09-23 Materials Selection in Mechanical Design, Fifth Edition, describes the procedures for material selection in mechanical design in order to ensure that the most suitable materials for a given application are identified from the full range of materials and section shapes available. Extensively revised for this fifth edition, the book is recognized as one of the leading materials selection texts, providing a unique and innovative resource for students, engineers, and product/industrial designers. Includes significant revisions to chapters on advanced materials selection methods and process selection, with coverage of newer processing

developments such as additive manufacturing Contains a broad scope of new material classes covered in the text with expanded data tables that include “functional materials such as piezoelectric, magnetostrictive, magneto-caloric, and thermo-electric materials Presents improved pedagogy, such as new worked examples throughout the text and additional end-of-chapter exercises (moved from an appendix to the relevant chapters) to aid in student learning and to keep the book fresh for instructors through multiple semesters “Forces for Change chapter has been re-written to outline the links between materials and sustainable design

**Performance Evaluation of Existing High-density Polyethylene Pipe** Sarah L. Gassman, 2000

**Nonlinear Dynamics** Ivan A. Lukovsky, 2015-04-24 This book is devoted to analytically approximate methods in the nonlinear dynamics of a rigid body with cavities (containers) partly filled by a liquid. The methods are normally based on the Bateman-Luke variational formalism combined with perturbation theory. The derived approximate equations of spatial motions of the body-liquid mechanical system (these equations are called mathematical models in the title) take the form of a finite-dimensional system of nonlinear ordinary differential equations coupling quasi-velocities of the rigid body motions and generalized coordinates responsible for displacements of the natural sloshing modes. Algorithms for computing the hydrodynamic coefficients in the approximate mathematical models are proposed. Numerical values of these coefficients are listed for some tank shapes and liquid fillings. The mathematical models are also derived for the contained liquid characterized by the Newton-type dissipation. Formulas for hydrodynamic force and moment are derived in terms of the solid body quasi-velocities and the sloshing-related generalized coordinates. For prescribed harmonic excitations of upright circular (annular) cylindrical and/or conical tanks, the steady-state sloshing

regimes are theoretically classified; the results are compared with known experimental data. The book can be useful for both experienced and early-stage mechanics, applied mathematicians and engineers interested in (semi-)analytical approaches to the “fluid-structure” interaction problems, their fundamental mathematical background as well as in modeling the dynamics of complex mechanical systems containing a rigid tank partly filled by a liquid.

*Resilience and Hybrid Threats* I. Linkov, L. Roslycky, B.D. Trump, 2019-12-19 Hybrid threats represent one of the rising challenges to the safe and effective management of digital systems worldwide. The deliberate misuse or disruption of digital technologies has wide-ranging implications for fields as diverse as medicine, social media, and homeland security. Despite growing concern about cyber threats within many government agencies and international organizations, few strategies for the effective avoidance and management of threats or the prevention of the disruption they can cause have so far emerged. This book presents multiple perspectives based upon a NATO Science for Peace and Security Programme Advanced Research Workshop on ‘Resilience and Hybrid Threats’ held in Pärnu, Estonia from 26-29 August 2018, and includes a mixture of workshop summary papers and invited perspectives from world experts. Topics include the development of strategies for the protection and recovery of systems affected by hybrid threats, and the benefits of those strategies under different disruption scenarios. The role of risk and resilience assessment pertaining to the information domain is a common focus across all perspectives. Offering an overview of resilience-based decision making through an approach that integrates the threats and dependencies related to infrastructural, informational, and social considerations, the book will be of interest to all those whose work involves the security of digital systems.
