How to Be a Better Person Seb Hunter, 2010-02-01 Why is it so difficult to find the time to help others? When Seb Hunter became aware of a nagging ache in the place where his soul ought to be, he embarked on a two year odyssey of volunteering &- with hilarious results. He collects litter, teaches pensioners how to use the internet, works at Oxfam (where he meets Gladys, his septuagenarian nemesis), mans a steam train line, becomes a star DJ on hospital radio, visits prisoners, and runs a very long way for charity... But will his quest for self-improvement be successful? How to Be a Better Person is the tale of a cynic's attempt to become a better person by helping others. For nothing. It's a volunteering call-to-arms! Oh no it's not! Well it is, sort of...

Slow Church C. Christopher Smith, John Pattison, 2014-05-06 In today's fast-food world, Christianity can seem outdated or archaic. The temptation becomes to pick up the pace and play the game. But Chris Smith and John Pattison invites us to leave franchise faith behind and enter the kingdom of God, where people know each other well and love one another as Christ loves the church.

The Power of Urban Water Nicola Chiarenza, Annette Haug, Ulrich Müller, 2020-05-05 Water is a global resource for modern societies - and water was a global resource for pre-modern societies. The many different water systems serving processes of urbanisation and urban life in ancient times and the Middle Ages have hardly been researched until now. The numerous contributions to this volume pose questions such as what the basic cultural significance of water was, the power of water, in the town and for the town, from different points of view. Symbolic, aesthetic, and cult aspects are taken up, as is the role of water in politics, society, and economy, in daily life, but also in processes of urban planning or in urban neighbourhoods. Not least, the dangers of polluted water or of flooding presented a challenge to urban society. The contributions in this volume draw attention to the complex, manifold relations between water and human beings. This collection presents the results of an international conference in Kiel in 2018. It is directed towards both scholars in ancient and mediaeval studies and all those interested in the diversity of water systems in urban space in ancient and mediaeval times.

Quantum and Semi-classical Percolation and Breakdown in Disordered Solids Asok K.

Sen, Kamal K. Bardhan, Bikas K. Chakrabarti, 2009-04-20 This lecture notes in physics volume mainly focuses on the semi classical and quantum aspects of percolation and breakdown in disordered, composite or granular systems. The main reason for this undertaking has been the fact that, of late, there have been a lot of (theoretical) work on quantum percolation, but there is not even a (single) published review on the topic (and, of course, no book). Also, there are many theoretical and experimental studies on the nonlinear current-voltage characteristics both away from, as well as one approaches, an electrical breakdown in composite materials. Some of the results are quite intriguing and may broadly be explained utilising a semi classical (if not, fully quantum mechanical) tunnelling between micron or nano-sized metallic islands dispersed separated by thin insulating layers, or in other words, between the dangling ends of small percolation clusters. There have also been several (theoretical) studies of Zener breakdown in Mott or Anderson insulators. Again, there is no review available, connecting them in any coherent fashion. A compendium volume connecting these experimental and theoretical studies should be unique and very timely, and hence this volume. The book is organised as follows. For completeness, we have started with a short and concise introduction on classical percolation. In the first chapter, D. Stauffer reviews the scaling theory of classical percolation emphasizing (biased) diffusion, without any quantum effects. The next chapter by A. K.

Many-Electron Densities and Reduced Density Matrices Jerzy Cioslowski, 2000-09-30 Science advances by leaps and bounds rather than linearly in time. It is not uncommon for a new concept or approach to generate a lot of initial interest, only to enter a quiet period of years or decades and then suddenly reemerge as the focus of new exciting investigations. This is certainly the case of the reduced density matrices (aka N-matrices or RDMs), whose promise of a great simplification of

quantum-chemical approaches faded away when the prospects of formulating the auxiliary yet essential N-representability conditions turned quite bleak. However, even during the period that followed this initial disappointment, the 2-matrices and their one-particle counterparts have been ubiquitous in the formalisms of modern electronic structure theory, entering the correlated-level expressions for the first-order response properties, giving rise to natural spinorbitals employed in the configuration interaction method and in rigorous analysis of electronic wavefunctions, and allowing direct calculations of ionization potentials through the extended Koopmans' theorem. The recent research of Nakatsuji, Valdemoro, and Mazziotti heralds a renaissance of the concept of RDMs that promotes them from the role of interpretive tools and auxiliary quantities to that of central variables of new electron correlation formalisms. Thanks to the economy of information offered by RDMs, these formalisms surpass the conventional approaches in conciseness and elegance of formulation. As such, they hold the promise of opening an entirely new chapter of quantum chemistry.

Track Changes Matthew G. Kirschenbaum, 2016-05-02 Writing in the digital age has been as messy as the inky rags in Gutenberg's shop or the molten lead of a Linotype machine. Matthew Kirschenbaum examines how creative authorship came to coexist with the computer revolution. Who were the early adopters, and what made others anxious? Was word processing just a better typewriter, or something more?
