Military Rifles Gerry Souter,Taylor Baldwin Kiland,2015-07-15 First invented by the Chinese thousands of years ago, the rifle has changed as warfare has evolved. First-hand interviews with soldiers in the field give readers insight as to how these rifles work, what military rifle training entails, and what it's like to use these high-powered weapons every day.

The Armed Forces: Instrument of Peace, Strength, Development and Prosperity Joseph Babatunde Fagoyinbo,2013-05-28 Across the ages, technological developments have been accelerated by the military. This results from the fact that able-bodied vibrant youths are generally involved and are also exposed to high-tech training prevailing at their times for assignments (defence and security) that are essential but not desired.

They form the Armed Forces for the nations. Such brilliant military officers like Caesar and Napoleon made their marks; and, in contemporary times, the Armed Forces of United States, France, Britain, Australia, etc are making remarkable contributions to technological developments. Such infrastructure as the Internet, the GPS and the cell phones are products that have significant military contributions. This book scans across the major regions of the world, highlights the efforts of representative countries in the regions and observes that nations that have harnessed the efforts of their Armed Forces have progressively developed. It is also observed that developments in America and Europe, though not entirely dependent on their Armed Forces, have been greatly affected by their efforts. In Asia, such countries as the People's Republic of China, Brazil, India, Pakistan and Singapore utilise the human and material resources within the Armed Forces for national growth and cohesion. Development effort is least in the African Region, except South Africa and Egypt; notwithstanding the high potentials as exhibited by Nigeria's Armed Forces. Although attempts to industrialise through the Armed Forces may be able to create economic development for developing nations, such factors as historical background, economic resources, political climate, government policies and infrastructure are equally important. Economic development programme of an aspiring country should: i. promote education and access to knowledge ii. aspire to economic self-sufficiency in economic power iii. allow and promote private

sector and foreign participation in defence production, research and development iv. commit itself to the establishment and support of defence industries v. indigenise defence programmes, establish a balance between military and economic development and vi. mobilise the nation's economy through technology partnership with the private sector and foreign investors.

Spatial Modeling in Forest Resources Management Pravat Kumar Shit, Hamid Reza Pourghasemi, Pulakesh Das, Gouri Sankar Bhunia, 2020-10-08 This book demonstrates the measurement, monitoring, mapping, and modeling of forest resources. It explores state-of-the-art techniques based on open-source software & R statistical programming and modeling specifically, with a focus on the recent trends in data mining/machine learning techniques and robust modeling in forest resources. Discusses major topics such as forest health assessment, estimating forest biomass & carbon stock, land use forest cover (LUFC), dynamic vegetation modeling

(DVM) approaches, forest-based rural livelihood, habitat suitability analysis, biodiversity and ecology, and biodiversity, the book presents novel advances and applications of RS-GIS and R in a precise and clear manner. By offering insights into various concepts and their importance for real-world applications, it equips researchers, professionals, and policy-makers with the knowledge and skills to tackle a wide range of issues related to geographic data, including those with scientific, societal, and environmental implications.

Comic Performance in Pakistan Claire

Pamment, 2017-05-24 This book explores comic performance in Pakistan through the vibrant Indo-Muslim tradition of the Punjabi bhānd which now holds a marginal space in contemporary weddings. With irreverent repartee, genealogical prowess, a topsy-turvy play with hierarchies and shape shifting, the low-status bhānd jostles space in otherwise rigid class and caste hierarchies. Tracing these negotiations in both historical and contemporary sites, the author unfolds a dynamic performance mode that travels from the Sanskrit jester and Sufi wise fool, into Muslim royal courts and households, weddings, contemporary carnivalesque and erotic popular Punjabi theatre and satellite television news. Through original historical and ethnographic research, this book brings to life hitherto unexplored territories of Pakistani popular culture and Indo-Muslim performance histories.

Bismuth Ying Zhou, Fan Dong, Shengming

Jin, 2018-06-20 Bismuth (Bi) is a post-transition

metal element with the atomic number of 83, which belongs to the pnictogen group elements in Period 6 in the elemental periodic table. As a heavy metal, the hazard of Bi is unusually low in contrast to its neighbors Pb and Sb. This property, along with other typical characteristics like strong diamagnetism and low thermal conductivity, makes Bi attractive in industrial applications. There are more than 100 commercial bismuth products, from pharmaceutical to industrial catalysts. Based on the wide applications of Bi materials, this book goes further and mainly focuses on the potential uses of Bi-based materials, which consist of nine chapters. In addition, a special chapter concerning the defect in bismuth is also presented.

Pakistan Under Siege Madiha Afzal, 2018-01-02
Over the last fifteen years, Pakistan has come to be defined exclusively in terms of its struggle with terror. But are ordinary Pakistanis extremists? And what explains how Pakistanis think? Much of the current work on extremism in Pakistan tends to study extremist trends in the country from a detached position—a top-down security perspective, that renders a one-dimensional picture of what is at its heart a complex, richly textured country of 200 million people. In this book, using rigorous analysis of survey data, in-depth interviews in schools and universities in Pakistan, historical narrative reporting, and her own intuitive understanding of

the country, Madiha Afzal gives the full picture of Pakistan's relationship with extremism. The author lays out Pakistanis' own views on terrorist groups, on jihad, on religious minorities and non-Muslims, on America, and on their place in the world. The views are not radical at first glance, but are riddled with conspiracy theories. Afzal explains how the two pillars that define the Pakistani state—Islam and a paranoia about India—have led to a regressive form of Islamization in Pakistan's narratives, laws, and curricula. These, in turn, have shaped its citizens' attitudes. Afzal traces this outlook to Pakistan's unique and tortured birth. She examines the rhetoric and the strategic actions of three actors in Pakistani politics—the military, the civilian governments, and the Islamist parties—and their relationships with militant groups. She shows how regressive Pakistani laws instituted in the 1980s worsened citizen attitudes and led to vigilante and mob violence. The author also explains that the educational regime has become a vital element in shaping citizens' thinking. How many years one attends school, whether the school is public, private, or a madrassa, and what curricula is followed all affect Pakistanis' attitudes about terrorism and the rest of the world. In the end, Afzal suggests how this beleaguered nation—one with seemingly insurmountable problems in governance and education—can change course.

Relativistic Effects in Atoms, Molecules, and Solids G.L. Malli, 2012-12-06 The NATO Advanced Study Institute (ASI) on Relativistic Effects in

Atoms, Molecules and Solids cosponsored by Simon Fraser University (SFU) and Natural Sciences and Engineering Research Council of Canada (NSERC) was held at the University of British Columbia (UBC) , Vancouver, Canada from August 10th until August 21st, 1981. A total of 77 lecturers and students with diverse backgrounds in Chemistry, Physics, Mathematics and various interdisciplinary subjects attended the ASI. In the proposal submitted to NATO for financial support for this ASI, it was suggested that recent impressive experimental developments coupled with the availability of sophisticated computer technology for detailed investigation of the relativistic structure of atoms, molecules and solids would provide an excellent testing ground for the validity and accuracy of the theoretical treatment of the relativistic many-electron systems involving medium and heavy atoms. Such systems are also of interest to the current energy crisis because of their usage for photovoltaic devices, nuclear fuels (UF₆), fusion lasers (Xe²⁺)' catalysts for solar energy conversion, etc.

Military Control in Pakistan Mazhar

Aziz,2007-10-24 This volume examines the role of the military, the most influential actor in Pakistan, and challenges conventional wisdom on the causes of political instability in this geographically important nuclear state. It rejects views that ethnic and religious cleavages and perceived economic or political mismanagement by civilian governments triggers military intervention in Pakistan. The study argues instead

that the military intervenes to remove civilian governments where the latter are perceived to be undermining the military's institutional interests. Mazhar Aziz shows that the Pakistani military has become a parallel state, and given the extent of its influence, will continue to define the nature of governance within the polity. Overall, Military Control in Pakistan is a timely reminder and an important resource for both scholars and policy makers, clearly demonstrating the need to refocus attention on the problem of an influential military whilst drawing appropriate conclusions about issues ranging from democratic norms, political representation and civilian-military relations.

Understanding Kashmir and Kashmiris Christopher Snedden, 2015-09-15 In 1846, the British created the state of Jammu and Kashmir (J&K) - popularly called Kashmir - and then quickly sold this prized region to the wily and powerful Raja, Gulab Singh. Intriguingly, had they retained it, the India-Pakistan dispute over possession of the state may never have arisen, but Britain's concerns lay elsewhere -- expansionist Russia, beguiling Tibet and unstable China circling J&K -- and their agents played the 'Great Game' in Afghanistan and 'Turkistan'. Snedden contextualizes the geo-strategic and historical circumstances surrounding the British decision to relinquish prestigious 'Kashmir', and explains how they and four Dogra maharajas consolidated and controlled J&K subsequently. He details what comprised this diverse princely state with distant borders and disunified peoples and explains the Maharaja of

J&K's controversial accession to India on 26 October 1947 - and its unintended consequences. Snedden weaves a compelling narrative that frames the Kashmir dispute, explains why it continues, and assesses what it means politically and administratively for the divided peoples of J&K and their undecided futures.

Aquatic Plants Namrita Lall, 2020-07-26 *Aquatic Plants: Pharmaceutical and Cosmetic Applications* provides a concise description of popular aquatic plants found across the globe. The chapters in this beautifully illustrated, full-color book focus on the aquatic species native to specific continents. Written by a global team of experts, this book explains the distribution, ethnobotanical uses, genome sequencing, chemical compounds, and biological activity of these plants and addresses the cultivation and sustainable production of aquatic and wetland plants.

Features: Describes the biological activity of a large collection of aquatic plants. Color photographs highlight each plant's ethnobotanical characteristics, and structural formulae show their chemical constituents. Contributions come from leading scientists from countries including the United States, India, Mauritius, South Africa, and Cyprus. *Aquatic Plants: Pharmaceutical and Cosmetic Applications* is a valuable resource for academics conducting research on aquatic plants

and for professionals in the pharmaceutical and cosmetic industries who are involved with the therapeutic applications of these plants and their sustainable usage.

Management and Sustainability in the Belt and Road Andrew W.H. Ip, Lianne K.W. Lam, 2023-06-06
China's Belt and Road Initiatives (BRI) is an ambitious infrastructure project conceived in 2013 by President Xi Jinping with development and investment initiatives stretching from Asia and Europe that reflect the original Silk Road with business networks through countries such as Afghanistan, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan, as well as India and Pakistan, spanning a route of more than 4,000 miles and history that can be dated back more than 2,200 years. Given the background of China's unique approach in fighting COVID-19, and against the backdrop of sluggish economic growth, innovation, and management, sustainable development of BRI will be the key and the driving force for the post-pandemic economic recovery of many countries, especially as BRI countries now account for nearly 30% of China's foreign trade and 15% of outward direct investment. The vision to create a vast network of railways, energy pipelines, highways, and streamlined border crossings to expand the international use of Chinese currency and improve connectivity to China is good foresight and proved fortuitous when the COVID-19 pandemic came to plague the world, and amid the conflicts between the United States and China as well as the war between Russia and Ukraine. Since the inception of BRI, many books

have been written to cover topics ranging from globalization to detailing how China's business and politics are a major motivation for China's overseas economic activities with case studies and practices, yet few of these books provide a structured approach to the sustainable management of BRI projects. This book is about how to manage the innovation, sustainability, and business necessary to make BRI work and how to handle the issues, problems, and crises that may arise in the process. Participants of BRI projects can take on many different roles, but ultimately, it is team effort and leadership that creates successful projects. Here, readers will find guidelines and insights to survive and prosper in a myriad of BRI opportunities and risks. Most important of all, this book provides a glimpse of different approaches for success in BRI projects, including sustainability, environmental issues, social and political aspects, technology, choice of industry, project management, education and training, governance, and many more.

MRI of Short and Ultrashort-T₂ Tissues Jiang Du, Graeme M. Bydder, 2023 Zusammenfassung: This book comprehensively covers ultrashort echo time (UTE), zero echo time (ZTE), and other magnetic resonance imaging (MRI) acquisition techniques for imaging of short and ultrashort-T₂ tissues. MRI uses a large magnet and radio waves to generate images of tissues in the body. The MRI signal is characterized by two time constants, spin-lattice relaxation time (T₁) which describes how fast the longitudinal magnetization recovers to its initial value after tipping to the transverse plane, and

spin-spin relaxation time (T2) which describes how fast the transverse magnetization decays.

Conventional MRI techniques have been developed to image and quantify tissues with relatively long T2s. However, the body also contains many tissues and tissue components such as cortical bone, menisci, ligaments, tendons, the osteochondral junction, calcified tissues, lung parenchyma, iron containing tissues, and myelin, which have short or ultrashort-T2s. These tissues are invisible with conventional MRI, and their MR and tissue properties are not measurable. UTE and ZTE type sequences resolve these challenges and make these tissues visible and quantifiable. This book first introduces the basic physics of conventional MRI as well as UTE and ZTE type MRI, including radiofrequency excitation, data acquisition, and image reconstruction. A series of contrast mechanisms are then introduced and these provide high resolution, high contrast imaging of short and ultrashort-T2 tissues. A series of quantitative UTE imaging techniques are described for measurement of MR tissue properties (proton density, T1, T2, T2*, T1ρ, magnetization transfer, susceptibility, perfusion and diffusion). Finally, clinical applications in the musculoskeletal, neurological, pulmonary and cardiovascular systems are described. This is an ideal guide for physicists and radiologists interested in learning more about the use of UTE and ZTE type techniques for MRI of short and ultrashort-T2 tissues
