*Hypertext and Cognition* Jean-Francois Rouet, Jarmo J. Levonen, Andrew Dillon, Rand J. Spiro, 2012-11-12 The recent evolution of western societies has been characterized by an increasing emphasis on information and communication. As the amount of available information increases, however, the user -- worker, student, citizen -- faces a new problem: selecting and accessing relevant information. More than ever it is crucial to find efficient ways for users to interact with information systems in a way that prevents them from being overwhelmed or simply missing their targets. As a result, hypertext systems have been developed as a means of facilitating the interactions between readers and text. In hypertext, information is organized as a network in which nodes are text chunks (e.g., lists of items, paragraphs, pages) and links are relationships between the nodes (e.g., semantic associations, expansions, definitions, examples -- virtually any kind of relation that can be imagined between two text passages). Unfortunately, the many ways in which these hypertext interfaces can be designed has caused a complexity that extends far beyond the processing abilities of regular users. Therefore, it has become widely recognized that a more rational approach based on a thorough analysis of information users' needs, capacities, capabilities, and skills is needed. This volume seeks to meet that need. From a user-centered perspective -- between systems and users -- this volume

presents theoretical and empirical research on the cognitive processes involved in using hypertext. In so doing, it illustrates three main approaches to the design of hypertext systems: \*cognitive, which examines how users process multilayered hypertext structures; \*ergonomical, which explores how users interact with the design characteristics of hardware and software; and \*educational, which studies the learning objectives, frequency and duration of hypertext sessions, type of reading activity, and the user's learning characteristics. This volume also tries to provide answers for the questions that have plagued hypertext research: \*What is hypertext good for? \*Who is hypertext good for? \*If it is useful for learning and instruction, then what type? \*What particular cognitive skills are needed to interact successfully with a hypertext system? Anyone interested in the fields of computer science, linguistics, psychology, education, and graphic design will find this volume intriguing, informative, and a definitive starting point for future research in the field of hypertext.

*Guide to Ministering to Alzheimer's Patients and Their Families* Pat Otwell,2008-05-19 Learn how to develop an effective Alzheimer's ministry. The Guide to Ministering to Alzheimer's Patients and Their Families examines the importance of spirituality in dealing with the everyday challenges of this mysterious disease. Not a "how-to" manual with step-by-step instructions or tried and true formulas, this unique book instead examines the essential elements of ministering to dementia patients based on the first-hand accounts of family members living through pain and uncertainty. The book explores the stages of Alzheimer's, grief and guilt, available resources, and implications of spiritual care for patients and families. It is equally useful as a textbook for graduate and undergraduate work, a reference for study groups and seminars, and a primer for those with limited knowledge of the illness. Ministers sometimes neglect Alzheimer's patients and their families because they feel they don't know what to say or do even though they want to be obedient and faithful servants in this specialized ministry. The Guide to Ministering to Alzheimer's Patients and Their Families communicates the thoughts, feelings, and needs of those affected by the disease to help ministers feel more comfortable, confident, and competent as they develop a theological understanding of God, Alzheimer's patients, and their role in ministry. The book also provides models for ministry; role-play scenarios; a sample text for a care facility worship service, a care facility memorial service, and a funeral service for a Christian and a non-Christian as well as a sample clergy seminar program on Alzheimer's ministry. The Guide to Ministering to Alzheimer's Patients and Their Families examines: common characteristics of early, mild, moderate, and severe Alzheimer's general information about Alzheimer's ethical decision-making support group ministry respite care religious rites faith issues heredity hospitalization of Alzheimer's patients long-distance caregiving working with other clergy The Guide to Ministering to Alzheimer's Patients and Their Families also includes a special appendix of selections from the Scriptures. This book is a unique resource for all Christians who desire to minister to those affected by Alzheimer's—especially pastors, priests, chaplains, pastoral counselors, church leaders, healthcare professionals, and seminary students.

**Googling Security** Greg Conti,2008-10-10 What Does Google Know about You? And Who Are They Telling? When you use Google's "free" services, you pay, big time—with personal information about yourself. Google is making a fortune on what it knows about you...and you may be shocked by just how much Google does know. Googling Security is the first book to reveal how Google's vast information stockpiles could be used against you or your business—and what you can do to protect yourself. Unlike other books on Google hacking, this book covers information you disclose when using all of Google's top applications, not just what savvy users can retrieve via Google's search results. West Point computer science professor Greg Conti reveals the privacy implications of Gmail, Google Maps, Google Talk, Google Groups, Google Alerts, Google's new mobile applications, and more. Drawing on his own advanced security research, Conti shows how Google's databases can be used by others with bad intent, even if Google succeeds in its pledge of "don't be evil." Uncover the trail of informational "bread crumbs" you leave when you use Google search How Gmail could be used to track your personal network of friends, family, and acquaintances How Google's map and location tools could disclose the locations of your home, employer, family and friends, travel plans, and intentions How the information stockpiles of Google and other online companies may be spilled, lost, taken, shared, or subpoenaed and later used for identity theft or even blackmail How the Google AdSense and DoubleClick advertising services could track you around the Web How to systematically reduce the personal information you expose or give away This book is a wake-up call and a "how-to" self-defense manual: an indispensable resource for everyone, from private citizens to security professionals, who relies on Google.
