Wondering Around Wandering Mike Perry,2012-04-03 Known worldwide as a creative darling, Mike Perry's celebrated DIY style of hand-drawn rendering has influenced a generation of contemporary designers and illustrators. Though Perry publishes zines, runs a magazine, makes clothing, has curated three successful books, and has painted, sculpted, silk-screened, and drawn on anything and everything, *Wondering Around Wandering* is his first monograph. And, in tune with his whimsical nature, this book functions as a true artist's book. Perry has carefully designed each page of this book, placing old work next to new and sometimes even reworking old work to make it new again. With explosive fluorescent colors, various paper stocks, and five four-page zines bound into the book, this volume is an object that must be experienced. With his playful approach to life and art, it is no surprise that Perry is considered the grandfather (or grandson) of this aesthetic. Artists, designers, hip trendsetters, children, the young-at-heart, and anyone interested in DIY culture will treasure this amazing project.

Laser Ablation and Its Applications Claude Phipps,2007 Laser ablation describes the interaction of intense optical fields with matter, in which atoms are selectively driven off by thermal or nonthermal mechanisms. The field of laser ablation physics is advancing so rapidly that its principal results are seen only in specialized journals and conferences. This is the first book that combines the most recent results in this rapidly advancing field with authoritative treatment of laser ablation and its applications, including the physics of high-power laser-matter interaction. Many practical applications exist, ranging from inertial confinement fusion to propulsion of aerostats for pollution monitoring to laser ignition of hypersonic engines to laser cleaning nanoscale contaminants in high-volume computer hard drive manufacture to direct observation of the electronic or dissociative states in atoms and molecules, to studying the properties of materials during 200kbar shocks developed in 200fs. Selecting topics which are representative of such a broad field is difficult. *Laser Ablation and its Applications* emphasizes the wide range of these topics rather than - as is so often the case in advanced science - focusing on one specialty or discipline. The book is divided into four sections: theory and modeling, ultrafast interactions, material processing and laser-matter interaction in novel regimes. The latter range from MALDI to ICF, SNOM's and femtosecond nanosurgery to laser space propulsion. The book arose from the SPIE series of High Power Laser Ablation Symposia which began in 1998. It is intended for a graduate course in laser interactions with plasmas and materials, but it should be accessible to anyone with a graduate degree in physics or engineering. It is also intended as a major reference work to familiarize scientists just entering the field with laser ablation and its applications.

The World of Warcraft Pop-Up Book Matthew Reinhart,2019-10-21 Built by bestselling paper engineer Reinhart, this pop-up book brings the most-loved locations of Warcraft to life. Each page unfolds into an eye-popping treat, depicting iconic sites with brand-new art and interactive pieces.

Portrait Of The Blues Paul Trynka,1997-08-21 The story of Blues music is the story of musicians meeting in bars, playing for a meal, taking trains to strange places with a guitar and the clothes they stand up in, and working in automobile factories or paint shops to make a living. Some even made it big, to the bright lights, recording studios, and television screens around the world. This is that story, told in a unique collection of first-hand interviews with John Lee Hooker, BB King, Buddy Guy and many more legendary names. Along with the pictures of world-famous photographer Val Wilmer, taken over the last thirty years in the American rural south and urban Blues centres like Chicago, New

The Lost Work of Will Eisner Will Eisner, 2016 Unearthed as part of a massive collection of pre-WWII newspaper printing plates, the mid-1930s comic strips **UNCLE OTTO** and **HARRY KARRY** represent the earliest known cartooning of the great comics and sequential art pioneer Will Eisner. In these strips you can see the young Eisner's imagination expanding, as he experiments with the possibilities of serialized storytelling and works through his numerous influences. The comics collected within document the genesis of one of the most iconic and brilliant cartoonists of all time.

A Faded Cottage Diann Shaddox, 2013-03 A successful but troubled artist returns home to his place of inspiration and reconnects with his long-ago, one true love. Will a twist of fate pull them apart once again?

Whispering Fog Diann Shaddox, 2014-06-25 One fall night a mystifying fog captures a young girl in the 20th century and a captain of an old sailing ship from the 18th century bringing them together. Belinda Brady, a young girl who lives next to a soaring old lighthouse becomes part of an old-seafaring tale, a tale of a whispering fog. On an unusual foggy night in 1959, Belinda sees an old ship out in the sea, a ship of years ago with soaring beige sails flapping like bird's wings. She hears the ship's lonely bell tolling and begins her descent into the misty vapor climbing down the steep, rocky cliffs to help the ship's crew. She loses her footing on the slick rocks falling literally into the whispering fog. Did the story end that night for Belinda when she fell down the cliff, or was it a dream of a young girl? On foggy nights, fishermen out in the sea have heard an old ship's bell tolling and voices calling out, whispering Belinda's name.
