Mountain Rescue Vehicles Cristina Berna, Eric Thomsen, 2024-04-10 Mountain search and rescue is one of the most demanding rescue activities of them all. It takes place under very severe and often dramatic conditions like high altitude, snow and ice, crevasses, glaciers and avalanches. It is the stuff of real heroic acts and romance. The occasional demand for assistance, but on a large scale, is then often carried out by volunteers, mainly locals due to the demand for local area and climate knowledge. This book is mainly focussed on the Alps, but also visits other European mountainous areas. The special conditions have led to the development of specialized equipment and the most visible is the widespread use of helicopters which have a high degree of maneuverability in inaccessible terrain and ability to carry a payload. The helicopter services work together with traditional ground based teams and sometimes move these teams to the search area. Helicopters swiftly move injured persons to a medical facility. Professional mountain rescue services are quite common near tourist resorts like ski resorts where there is a regular demand. The authors have made a similar book on American Air Rescue and the styles have both similarity and differences between the two continents. We hope the reader will enjoy our selection of photos.

Mathematical Foundations of Image Processing and Analysis Jean-Charles Pinoli, 2014-07-22

Mathematical Imaging is currently a rapidly growing field in applied mathematics, with an increasing need for theoretical mathematics. This book, the second of two volumes, emphasizes the role of mathematics as a rigorous basis for imaging sciences. It provides a comprehensive and convenient overview of the key mathematical concepts, notions, tools and frameworks involved in the various fields of gray-tone and binary image processing and analysis, by proposing a large, but coherent, set of symbols and notations, a complete list of subjects and a detailed bibliography. It establishes a bridge between the pure and applied mathematical disciplines, and the processing and analysis of gray-tone and binary images. It is accessible to readers who have neither extensive mathematical training, nor prior knowledge in Image Processing and Analysis. It is a self-contained book focusing on the mathematical notions, concepts, operations, structures, and frameworks that are beyond or involved in Image Processing and Analysis. The notations are simplified as far as possible in order to be more explicative and consistent throughout the book and the mathematical aspects are systematically discussed in the image processing and analysis context, through practical examples or concrete illustrations. Conversely, the discussed applicative issues allow the role of mathematics to be highlighted. Written for a broad audience – students, mathematicians, image processing and analysis specialists, as well as other scientists and practitioners – the author hopes that readers will find their own way of using the book, thus providing a mathematical companion that can help mathematicians become more familiar with image processing and analysis, and likewise,

imageprocessing and image analysis scientists, researchers and engineersgain a deeper understanding of mathematical notions andconcepts.

Bird Strike in Aviation Ahmed F. El-Sayed,2019-05-20 Groundbreaking Handbook Offers

Detailed Research and Valuable Methodology to Address Dangerous and Costly Aviation Hazard

Though annual damages from bird and bat collisions with aircraft have been estimated at \$400 million in the United States and up to \$1.2 billion in commercial aviation worldwide and despite numerous conferences and councils dedicated to the issue, very little has been published on this expensive and sometimes-lethal flying risk. Bird Strike in Aviation seeks to fill this gap, providing a comprehensive guide to preventing and minimizing damage caused by bird strike on aircraft. Based on a thorough and comprehensive examination of the subject, Dr. El-Sayed offers different approaches to reducing bird strikes, including detailed coverage of the three categories necessary for such reduction, namely, awareness/education, bird management (active and passive control), and aircraft design. In addition, the text discusses the importance of cooperation between airplanes, airports and air traffic authorities as well as testing methods necessary for certification of both aircraft frame and engine. Other notable features include: Statistics and analyses for bird strikes with both civil and military helicopters as well as military fixed wing aircrafts, including annual costs, critical flight altitudes, critical parts of aircraft, distance from air base and specifics of date and timing Thorough review and analysis all fatal bird strike accidents and most non-fatal accidents since 1905, the first book to provide such a reference The use of numerical methods in analyzing historic data (ex. probability functions, finite element methods for analyzing impact on aircraft structure, experimental measurement technique for displacement, vibration, component distortion, etc.) Instruction on identification of bird species (using visual, microscopic, and DNA evidence) and details of bird migration to aid air traffic control in avoiding scenarios likely to result in collision With its wealth of statistical data, innovative research, and practical suggestions, Bird Strike in Aviation will prove a vital resource for researchers, engineers and graduate students in aerospace engineering/manufacturing or ornithology, as well as for military

and civilian pilots and flight crew or professionals in aviation authorities and air traffic control.

Genesis Too Rob Ransone, 2019-10-21 *Genesis Too: A Rational Story of How All Things Began and the Main Events that Have Shaped Our World: A Resolution of Creationist and Evolutionist Theories of the Creation of the Universe* By: Rob Ransone *Genesis Too* addresses such sensitive issues as: Where did that first particle come from that resulted in the Big Bang and what was it? Why are creationist and evolutionist theories of the Universe both right? Why is there Free Will? Why is there evil in the world? Is God really omnipotent? Was Jesus God's only son? Is there a heaven or a hell? Why are Islamic terrorists not following the teachings of Muhammad? Why does the US Government only back scoundrels in other countries? Why is Johannes Gutenberg the most important individual who ever lived? Of the American, French, and Russian revolutions, why is the French Revolution the most important? What were the three worst decisions made during World War II? What were the two worst decisions made by US presidents? Why did all 22 US intelligence agencies fail to prevent 9/11, even though the preparations were in plain sight? If we meet aliens from other worlds, will we be the colonists or the Indians? What are the ethics of changing the human genome?
