The Linux Cookbook, 2nd Edition Michael Stutz,2004 Provides step-by-step instructions on how to use the computer operating system Linux.

HTML, CSS, Bootstrap, Php, Javascript and MySql Olga Maria Stefania Cucaro,2022-02-08 This book aims to initiate those who want to independently create a website, to the world of domains and programming linked to the web. The author conceived this work as a scientific work intended for educational and study use for all those who approach the study of client-side and server-side programming. In the first place the difference between the various domains existing on the network will be explained and at a later time we will try to explain the CSS and HTML and then enter the PHP programming (server side) and JavaScript (client side) with the creation of databases via phpMyAdmin. All this will be explained through an example website created specifically using a free Bootstrap for simplicity and basic convenience and programming a control panel with login connected to the site via database for inserting images directly from the web by uploading them to the database created with connected phpMyAdmin to the site. Obviously, after entering the world of databases and programming, you can apply this knowledge to any other need for iteration by the user required by the site project. The aim of this study is not to create simple web pages that today can be done easily with WordPress or other easy-to-use software, but for purely educational purposes to explain the use of databases and server and client-side programming to make a dynamic otherwise static site. In summary, this work can be useful for those who want to approach the fascinating world of website programming from the beginning.

Internet Pornography Michael McBain,

Strategic Inventions of World War I Cynthia A. Roby,2015-12-15 When America entered World War I, it seemed as though the world had turned upside down. Many new technologies were developed on both sides of this conflict, challenging the men and women who fought in it in ways they never could have imagined. Among these developments were the military tank, the tracer bullet, and most deadly of all, poison gas. This book examines the times and events of the war, the key technologies that influenced and affected it, and the lasting impact these had on global society.

Land Cover Classification of Remotely Sensed Images S. Jenicka,2021-03-10 The book introduces two domains namely Remote Sensing and Digital Image Processing. It discusses remote sensing, texture, classifiers, and procedures for performing the texture-based segmentation and land cover classification. The first chapter discusses the important terminologies in remote sensing, basics of land cover classification, types of remotely sensed images and their characteristics. The second chapter introduces the texture and a detailed literature survey citing papers related to texture analysis and image processing. The third chapter describes basic texture models for gray level images and multivariate texture models for color or remotely sensed images with relevant Matlab source codes. The fourth chapter focuses on texture-based classification and texture-based segmentation. The Matlab source codes for performing supervised texture based segmentation using basic texture models and minimum distance classifier are listed. The fifth chapter describes supervised and unsupervised classifiers. The experimental results obtained using a basic texture model (Uniform Local Binary Pattern) with the classifiers described earlier are discussed through the relevant Matlab source codes. The sixth chapter describes land cover classification procedure using multivariate (statistical and spectral) texture models and minimum distance classifier with Matlab source codes. A few performance metrics are also explained. The seventh chapter explains how texture based segmentation and land cover classification are performed using the hidden Markov model with relevant Matlab source codes. The eighth chapter gives an overview of spatial data analysis and other existing land cover classification methods. The ninth chapter addresses the research issues and challenges associated with land cover classification using textural approaches. This book is useful for undergraduates in Computer Science and Civil Engineering and postgraduates who plan to do research or project work in digital image processing. The book can serve as a guide to those who narrow down their research to processing remotely sensed images. It addresses a wide range of texture models and classifiers. The book not only guides but aids the reader in implementing the concepts through the Matlab source codes listed. In short, the book will be a valuable resource for growing academicians to gain expertise in their area of specialization and students who aim at gaining in-depth knowledge through practical implementations. The exercises given under texture based segmentation (excluding land cover classification exercises) can serve as lab exercises for the undergraduate students who learn texture based image processing.

A Survey of Computational Physics Rubin H. Landau,José Páez,Cristian C. Bordeianu,2011-10-30 Computational physics is a rapidly growing subfield of computational science, in large part because computers can solve previously intractable problems or simulate natural processes that do not have analytic solutions. The next step beyond Landau's First Course in Scientific Computing and a follow-up to Landau and Páez's Computational Physics, this text presents a broad survey of key topics in computational physics for advanced undergraduates and beginning graduate students, including new discussions of visualization tools, wavelet analysis, molecular dynamics, and computational fluid dynamics. By treating science, applied mathematics, and computer science together, the book reveals how this knowledge base can be applied to a wider range of real-world problems than computational physics texts normally address. Designed for a one- or two-semester course, A Survey of Computational Physics will also interest anyone who wants a reference on or practical experience in the basics of computational physics. Accessible to advanced undergraduates Real-world problem-solving approach Java codes and applets integrated with text Companion Web site includes videos of lectures

A Global Church History Steven D. Cone,Robert F. Rea,2019-09-05 How did the Christian Church originate, what journeys has it taken over two millennia, and how did it come to exist in its present, myriad forms? The answers to these questions form a tapestry of history that reaches from first century Palestine to the ends of the earth. This volume tells this rich story from an ecumenical perspective, drawing on both Eastern and

Western historic sources in exploring the rise of Eastern Orthodoxy; the church across Asia, Africa, and the Americas; and the reformations of the Western Church; including the diversity of contemporary voices. The work benefits from many pedagogical features: - boxed text sections identifying central figures and points of debate - study questions for each chapter - chapter summaries - maps --charts --index Supplemented by over 400 illustrations, this book embraces the universality of historic and current Christianity, creating a single and comprehensive volume for students of Church history and systematic theology.

Approximation By Complex Bernstein And Convolution Type Operators Sorin G Gal,2009-08-11 The monograph, as its first main goal, aims to study the overconvergence phenomenon of important classes of Bernstein-type operators of one or several complex variables, that is, to extend their quantitative convergence properties to larger sets in the complex plane rather than the real intervals. The operators studied are of the following types: Bernstein, Bernstein—Faber, Bernstein-Butzer, q-Bernstein, Bernstein-Stancu, Bernstein-Kantorovich, Favard-Szász-Mirakjan, Baskakov and Balázs-Szabados.The second main objective is to provide a study of the approximation and geometric properties of several types of complex convolutions: the de la Vallée Poussin, Fejér, Riesz-Zygmund, Jackson, Rogosinski, Picard, Poisson-Cauchy, Gauss-Weierstrass, q-Picard, q-Gauss-Weierstrass, Post-Widder, rotation-invariant, Sikkema and nonlinear. Several applications to partial differential equations (PDEs) are also presented.Many of the open problems encountered in the studies are proposed at the end of each chapter. For further research, the monograph suggests and advocates similar studies for other complex Bernstein-type operators, and for other linear and nonlinear convolutions.

Discrete Harmonic Analysis Tullio Ceccherini-Silberstein,Fabio Scarabotti,Filippo Tolli,2018-05-31 This self-contained book introduces readers to discrete harmonic analysis with an emphasis on the Discrete Fourier Transform and the Fast Fourier Transform on finite groups and finite fields, as well as their noncommutative versions. It also features applications to number theory, graph theory, and representation theory of finite groups. Beginning with elementary material on algebra and number theory, the book then delves into advanced topics from the frontiers of current research, including spectral analysis of the DFT, spectral graph theory and expanders, representation theory of finite groups and multiplicity-free triples, Tao's uncertainty principle for cyclic groups, harmonic analysis on GL(2,Fq), and applications of the Heisenberg group to DFT and FFT. With numerous examples, figures, and over 160 exercises to aid understanding, this book will be a valuable reference for graduate students and researchers in mathematics, engineering, and computer science.

Computational Methods for Two-Phase Flow and Particle Transport Wen Ho Lee,2013-03-22 This book describes mathematical formulations and computational methods for solving two-phase flow problems with a computer code that calculates thermal hydraulic problems related to light water and fast breeder reactors. The physical model also handles the particle and gas flow problems that arise from coal gasification and fluidized beds. The second part of this book deals with the computational methods for particle transport.

Fault Detection, Supervision and Safety of Technical Processes 2006 Hong-Yue Zhang,2007-03-01 The safe and reliable operation of technical systems is of great significance for the protection of human life and health, the environment, and of the vested economic value. The correct functioning of those systems has a profound impact also on production cost and product quality. The early detection of faults is critical in avoiding performance degradation and damage to the machinery or human life. Accurate diagnosis then helps to make the right decisions on emergency actions and repairs. Fault detection and diagnosis (FDD) has developed into a major area of research, at the intersection of systems and control engineering, artificial intelligence, applied mathematics and statistics, and such application fields as chemical, electrical, mechanical and aerospace engineering. IFAC has recognized the significance of FDD by launching a triennial symposium series dedicated to the subject. The SAFEPROCESS Symposium is organized every three years since the first symposium held in Baden-Baden in 1991. SAFEPROCESS 2006, the 6th IFAC Symposium on Fault Detection, Supervision and Safety of Technical Processes was held in Beijing, PR China. The program included three plenary papers, two semi-plenary papers, two industrial talks by internationally recognized experts and 258 regular papers, which have been selected out of a total of 387 regular and invited papers submitted. * Discusses the developments and future challenges in all aspects of fault diagnosis and fault tolerant control * 8 invited and 36 contributed sessions included with a special session on the demonstration of process monitoring and diagnostic software tools
