**What in the World is Music?** Alison E. Arnold, Jonathan C. Kramer, 2023-09-13 What in the World is Music? Second Edition is an undergraduate, interactive e-textbook that explores the shared ways people engage with music and how humans organize and experience sound. It adopts a global approach, featuring more than 300 streaming videos and 50 streaming audio tracks of music from around the world. Drawing from both musicological and ethnomusicological modes of inquiry, the authors explain the nature and meaning of music as a universal human practice, making no distinction between Western and non-Western repertoires while providing students with strong points of connection to the ways it affects their own lives. The What in the World is Music? curriculum is divided into five parts, with a fully integrated multimedia program linked directly to the chapters: The Foundations of Music I proposes a working definition of music and considers inquiry-guided approaches to its study: Why do humans have innate musical perception? How does this ability manifest itself in the human voice? A catalog of musical instruments showcases global diversity and human ingenuity. The Foundations of Music II continues the inquiry-guided approach, recognizing the principles by which musical sound is organized while discussing elements such as rhythm, melody, harmony, texture, form, genre, and style. Where did music come from? What is it for? Music and Identity examines how music operates in shaping, negotiating, and expressing human identity and is organized around three broad conceptual frames: the group, hybridity, and conflict. Music and the Sacred addresses how music is used in religious practices throughout the world: chanting sacred texts and singing devotional verses, inspiring religious experience such as ecstasy and trance, and marking and shaping ritual space and time. Music and Social Life analyzes the uses of music in storytelling, theater, and film. It delves into the contributions of sound technologies,

while looking at the many ways music enhances nightlife, public ceremonies, and festivals.

**Visual proficiency - A perspective on art education** Kunibert Bering, Rolf Niehoff, 2015-12-18  
Every day, over a million images are uploaded to flickr. This is a striking example of the so-called »flood« of images that emerged with the beginning of the digital age. A generation of adolescents has already been socialised with this flood of images and deals with it on a daily basis, both in their networks and elsewhere. Art education thus faces significant challenges: art is the only school subject that deals with the problems inherent in images as images, making them the focus of pedagogic activity. This volume presents both the foundations for engaging with the phenomenon of the »image« in a competent and historically informed manner as well as the perspectives for art education that arise from these foundations. It is based upon the conviction that providing orientation in a world defined by images does not mean following solely a technocratic, functionalist or even neoliberal »concept of education«. Quite the contrary: »providing an orientation« for how to deal with images in a world that is dominated by them is a crucial part of the holistic development of young people's personalities. The volume's main focus lies upon the new functions taken on both by the image and by art more generally. It takes into account aspects of globalisation and participation and also includes more unusual views (often from a cross-media perspective) of art and its historical repertory, which even current image creation is unable to dispense with. The volume also deals extensively with architecture and the images it conveys.

An ideal reference for web site designers in corporations, government, nonprofit organizations, and academic institutions, the book explains established design principles and covers all aspects of web design--from planning to production to maintenance. The guide also shows how these principles apply in web design projects whose primary concerns are information design, interface design, and efficient search and navigation.
