A Global Church History Steven D. Cone, Robert F. Rea, 2019-09-05

How did the Christian Church originate, what journeys has it taken over two millennia, and how did it come to exist in its present, myriad forms? The answers to these questions form a tapestry of history that reaches from first century Palestine to the ends of the earth. This volume tells this rich story from an ecumenical perspective, drawing on both Eastern and Western historic sources in exploring the rise of Eastern Orthodoxy; the church across Asia, Africa, and the Americas; and the reformations of the Western Church; including the diversity of contemporary voices. The work benefits from many pedagogical features: - boxed text sections identifying central figures and points of debate - study questions for each chapter - chapter summaries - maps --charts --index
Supplemented by over 400 illustrations, this book embraces the universality of historic and current Christianity, creating a single and comprehensive volume for students of Church history and systematic theology.

Reading and Learning Andreas Dengel, Markus Junker, Anette

Weisbecker, 2004-04-01 The amounts of information that are flooding people both at the workplace and in private life have increased dramatically in the past ten years. The number of paper documents doubles every four years, and the amount of information stored on all data carriers every six years. New knowledge, however, increases at

a considerably lower rate. Possibilities for automatic content recognition in various media and for the processing of documents are therefore becoming more important every day. Especially in economic terms, the efficient handling of information, i.e., finding the right information at the right time, is an invaluable resource for any enterprise, but it is particularly important for small- and medium-sized enterprises. The market for document management systems, which in Europe had a volume of approximately 5 billion euros in 2000, will increase considerably over the next few years. The BMBF recognized this development at an early stage. As early as in 1995, it pooled national capabilities in this field in order to support research on the automatic processing of information within the framework of a large collaborative project (READ) involving both industrial companies and research centres. Evaluation of the results led to the conclusion that research work had been successful, and, in a second phase, funding was provided for the collaborative follow-up project Adaptive READ from 1999 to 2003. The completion of these two important long-term research projects has contributed substantially to improving the possibilities of content recognition and processing of handwritten, printed and electronic documents.

New Approaches for Sustainable & Resilient Processes and Products of Social Housing Development in the Arabian Gulf Countries Khaled Galal Ahmed, Mohamed H. Elnabawi Mahgoub, Lindita Bande, Martin Scoppa, 2023-10-16 Social housing has been a forefront research topic especially from its economic and socio-cultural factors. The nature of social housing in the Arabian Gulf Countries has been distinctive in its approach with usually generous areas and urban sprawl designs. Recently, most of these Arabian Gulf

Countries have gone through profound transformation in their social and housing paradigms influenced by their sustainability adopted agendas. Still, scholarly documentation and analysis of the processes and products of these transformed paradigms are largely missing, or at least fragmented. So, there is a desperate need to boost research work in this field as related to each city/country in this region, with largely expected mutual effects that these experiences might have on each other and on the global debate about sustainable and resilient social housing as a whole.

Responsive Web Design in Practice Jason A. Clark, 2015-09-03 Use this book to learn how to utilize CSS techniques such as fluid grids and flexible images combined with responsive design techniques such as media queries to deliver an optimal experience for your library patrons regardless of device. Design one website to fit them all.

Web Style Guide Patrick J. Lynch, Sarah Horton, 2016-01-01 A classic reference book on user interface design and graphic design for web sites, updated to reflect a rapidly changing market Consistently praised as the best volume on classic elements of web site design, *Web Style Guide* has sold many thousands of copies and has been published around the world. This new revised edition confirms *Web Style Guide* as the go-to authority in a rapidly changing market. As web designers move from building sites from scratch to using content management and aggregation tools, the book's focus shifts away from code samples and toward best practices, especially those involving mobile experience, social media, and accessibility. An ideal reference for web site designers in corporations, government, nonprofit organizations, and academic institutions, the book explains established design principles and covers all aspects of web design--from planning to production to maintenance. The guide also shows how these

principles apply in web design projects whose primary concerns are information design, interface design, and efficient search and navigation.

21st Century Homestead: Sustainable Agriculture II: Farming and Natural Resources Marlon Henkel,

Mapping Hacks Schuyler Erle, Rich Gibson, Jo Walsh, 2005-06-09
Since the dawn of creation, man has designed maps to help identify the space that we occupy. From Lewis and Clark's pencil-sketched maps of mountain trails to Jacques Cousteau's sophisticated charts of the ocean floor, creating maps of the utmost precision has been a constant pursuit. So why should things change now? Well, they shouldn't. The reality is that map creation, or cartography, has only improved in its ease-of-use over time. In fact, with the recent explosion of inexpensive computing and the growing availability of public mapping data, mapmaking today extends all the way to the ordinary PC user. *Mapping Hacks*, the latest page-turner from O'Reilly Press, tackles this notion head on. It's a collection of one hundred simple--and mostly free--techniques available to developers and power users who want draw digital maps or otherwise visualize geographic data. Authors Schuyler Erle, Rich Gibson, and Jo Walsh do more than just illuminate the basic concepts of location and cartography, they walk you through the process one step at a time. *Mapping Hacks* shows you where to find the best sources of geographic data, and then how to integrate that data into your own map. But that's just an appetizer. This comprehensive resource also shows you how to interpret and manipulate unwieldy cartography data, as well as how to incorporate personal photo galleries into your maps. It even provides practical uses for GPS (Global Positioning System) devices--those touch-of-a-button street maps integrated into

cars and mobile phones. Just imagine: If Captain Kidd had this technology, we'd all know where to find his buried treasure! With all of these industrial-strength tips and tools, Mapping Hacks effectively takes the sting out of the digital mapmaking and navigational process. Now you can create your own maps for business, pleasure, or entertainment--without ever having to sharpen a single pencil.

Design of Steel Structures ECCS - European Convention for Constructional Steelwork, 2014-01-22 This book introduces the design concept of Eurocode 3 for steel structures in building construction, and their practical application. Following a discussion of the basis of design, including the limit state approach, the material standards and their use are detailed. The fundamentals of structural analysis and modeling are presented, followed by the design criteria and approaches for various types of structural members. The following chapters expand on the principles and applications of elastic and plastic design, each exemplified by the step-by-step design calculation of a braced steel-framed building and an industrial building, respectively. Besides providing the necessary theoretical concepts for a good understanding, this manual intends to be a supporting tool for the use of practicing engineers. In order of this purpose, throughout the book, numerous worked examples are provided, concerning the analysis of steel structures and the design of elements under several types of actions. These examples will provide for a smooth transition from earlier national codes to the Eurocode.

Tides in Astronomy and Astrophysics Jean Souchay, Stéphane Mathis, Tadashi Tokieda, 2012-12-14 Based on the lecture notes of a school titled 'Tides in Astronomy and Astrophysics' that brought together students and researchers, this book focuses on the

fundamental theories of tides at different scales of the universe—from tiny satellites to whole galaxies—and on the most recent developments. It also attempts to place the study of tides in a historical perspective. Starting with a general tutorial on tides, the theme of tides is approached in 9 chapters from many directions. They allow non-experts to pick up a physical intuition and a sense of orders of magnitude in the theory of tides. These carefully prepared lecture notes by leaders in the field include many illustrative figures and drawings. Some even offer a variety of simple back-of-the-envelope problems.

Arduino for the Cloud Claus Kuhnel, 2015-05-19 Arduino for the Cloud considers the Arduino Yún and the Dragino Yún Shield as components closing the gap between a typical microcontroller application and connection to the cloud. Arduino Yún combines the classic Arduino with an Atheros AR9331 system-on-a-chip (SoC) for wireless access points and routers platforms, which uses the Linux distribution Linino (OpenWRT) operating system. The Dragino Yun Shield expands any Arduino with network capabilities by the Atheros AR9331. The combination of microcontroller and Linux device supports the whole chain from sensor to software applications in the cloud by hardware and software. This book deals with the Arduino and the Linux device and their interaction, without the need of detailed Linux knowledge.

Visual Domain Adaptation in the Deep Learning Era Gabriela Csurka, Timothy M. Hospedales, Mathieu Salzmann, Tatiana Tommasi, 2022-06-06 Solving problems with deep neural networks typically relies on massive amounts of labeled training data to achieve high performance. While in many situations huge volumes of unlabeled data can be and often are generated and available, the cost of

acquiring data labels remains high. Transfer learning (TL), and in particular domain adaptation (DA), has emerged as an effective solution to overcome the burden of annotation, exploiting the unlabeled data available from the target domain together with labeled data or pre-trained models from similar, yet different source domains. The aim of this book is to provide an overview of such DA/TL methods applied to computer vision, a field whose popularity has increased significantly in the last few years. We set the stage by revisiting the theoretical background and some of the historical shallow methods before discussing and comparing different domain adaptation strategies that exploit deep architectures for visual recognition. We introduce the space of self-training-based methods that draw inspiration from the related fields of deep semi-supervised and self-supervised learning in solving the deep domain adaptation. Going beyond the classic domain adaptation problem, we then explore the rich space of problem settings that arise when applying domain adaptation in practice such as partial or open-set DA, where source and target data categories do not fully overlap, continuous DA where the target data comes as a stream, and so on. We next consider the least restrictive setting of domain generalization (DG), as an extreme case where neither labeled nor unlabeled target data are available during training. Finally, we close by considering the emerging area of learning-to-learn and how it can be applied to further improve existing approaches to cross domain learning problems such as DA and DG.

The Environments of the Sun and the Stars Jean-Pierre

Rozelot,Coralie Neiner,2012-08-17 Based on lectures given at a CNRS

summer school in France, this book covers many aspects of stellar environments (both observational and theoretical) and offers a broad overview of the field. More specifically, Part I of the book focuses on the Sun, the properties of the ejected plasma, of the solar wind and on space weather. The second part deals with tides in planetary systems and in binary stellar systems, as well as with interactions in massive binary stars as seen by interferometry. Finally the chapters of Part III discuss the environments of young or evolved stars, stellar winds, agnetic fields and disks. With its broad approach the book will provide advanced students as well as researchers with a good overview of the environments of the Sun and the stars.

A History of Israel Walter C. Kaiser, Jr., Paul D

Wegner, 2017-11-20 This volume provides a comprehensive introduction to the history of ancient Israel—from the creation account to setting the stage for the New Testament era. This edition has been thoroughly revised, but maintains its focus on Old Testament texts as well as ancient Near Eastern literary and archeological sources to highlight the important modern controversies surrounding this part of Scripture. The work provides an up-to-date, conservative, evangelical position on matters relating to ancient Israel's history and is illustrated with over 600 figures, charts, and maps.

The Christ Is Dead, Long Live the Christ Andrew

Oberg, 2022-07-07 *The Christ Is Dead, Long Live the Christ: A Philotheologic Prayer, a Hermeneutics of Healing* is a call for renewal and reinvention. Following a brief examination of the historical Jesus (Yeshua, using his actual Aramaic/Hebrew name), the book moves into a phenomenological study of the image, idea, and the place of both in our felt experiences. Looking closer at what we think were the actual words of this wandering sage, the picture we arrive at is one

that will surprise, possibly unsettle. Moved out of our traditional comfort zones, we find the need to question what we have been told were Yeshua's teachings, compelling us to further rethink messages on the afterlife, human finitude, so-called atonement theologies, and above all the kingdom of God. Whatever this vision was--and might yet be--it seems central to Yeshua's efforts, and so we finally weigh these kingdom facets against a broader ideascap, offering suggestions for how a Yeshuan kingdom project situated within the panoply of a widely comprehended Judaic way-of-being might yield fresh life to we who find worth in the utterances and what they point towards, to we who wonder about a more human(e) world.

J-Contractive Matrix Valued Functions and Related Topics Damir Z. Arov, Harry Dym, 2008-11-06 A comprehensive introduction to the theory of J-contractive and J-inner matrix valued functions with respect to the open upper half-plane and a number of applications of this theory. It will be of particular interest to those with an interest in operator theory and matrix analysis.
