Features Explains the process of urban heritage conservation, including the process of urban renewal and its regeneration and the role of citizens in urban renewal, planning, and management. Includes several case studies highlighting urban environmental problems and challenges in developed and developing countries and the ways for converting urban areas into smart cities. Focuses on urban resources, the supply of energy in smart cities, and their proper management practices. Introduces the role of remote sensing, GIS, and IoT in making a smart city and meeting sustainable goals. Analyzes unique case studies, their challenges and obstacles, and proposes a set of factors to understanding smart city initiatives and projects.

The Obtuse Experiment Malcolm Rose, 1993 Sternhill, Minister for Education, was there to see them off - a shipload of teenagers who were being given, thanks to the government, a cruise to the Arctic Circle. How and why had they been selected? It turns out

to be more sinister than first assumed. By the author of Son of Pete Flude.

Non-Binary Lives Jos Twist, Meg-John Barker, Kat Gupta, Ben Vincent, 2020-04-21 LAMBDA LITERARY AWARD FINALIST 'Essential reading' - THE INDEPENDENT 'Vital and insightful' - OWL FISHER What does it mean to be non-binary in the 21st Century? Our gender identity is impacted by our personal histories; the cultures, communities and countries we are born into; and the places we go and the people we meet. But the representation of contemporary non-binary identities has been limited, until now. Pushing the narrative around non-binary identities further than ever before, this powerful collection of essays represents the breadth of non-binary lives, across the boundaries of race, class, age, sexuality, faith and more. Leading non-binary people share stories of their intersecting lives; how it feels to be non-binary and neurodiverse, the challenges of being a non-binary pregnant person, what it means to be non-binary within the Quaker community, the joy of reaching gender euphoria. This thought-provoking anthology shows that there is no right or wrong way to be non-binary.

The Liars' Gospel Naomi Alderman, 2013-03-12 An award-winning writer reimagines the life of Jesus, from the points of view of four people closest to him before his death. This is the story of Yehoshuah, who wandered Roman-occupied Judea giving sermons and healing the sick. Now, a year after his death, four people tell their stories. His mother

grieves, his friend lehuda loses his faith, the High Priest of the Temple tries to keep the peace, and a rebel named Bar-Avo strives to bring that peace tumbling down. It was a time of political power plays and brutal tyranny. Men and women took to the streets to protest. Dictators put them down with iron force. In the midst of it all, one inconsequential preacher died. And either something miraculous happened, or someone lied. Viscerally powerful in its depictions of the period -- massacres and riots, animal sacrifice and human betrayal -- The Liars' Gospel makes the oldest story entirely new.

Doctor Who: Borrowed Time Naomi Alderman, 2011-06-23 WHATEVER YOU BORROW MUST BE REPAYED... Andrew Brown never has enough time. No time to call his sister, or to prepare for that important presentation at the bank where he works. The train's late, the lift jams. If only he had just a little more time. And time is the business of Mr Symington and Mr Blenkinsop. They'll lend him some - at a very reasonable rate of interest. Scenting something sinister, the Doctor, Amy and Rory go undercover at the bank. But they have to move fast to stop Symington and Blenkinsop before they cash in their investments. Borrowed Time is a thrilling race against the clock from Naomi A Alderman, the Bailey's Prize winning author of The Power featuring the Eleventh Doctor, Amy and Rory, as played by Matt Smith, Karen Gillan and Arthur Darvill in the spectacular hit Doctor Who series from BBC Television. 'Alderman is a fluent and powerful writer' - Sunday Times

Corporate Social Responsibility in Poland Aneta Długopolska-Mikonowicz, Sylwia Przytuła, Christopher Stehr, 2018-12-19 This book examines the development and adoption of corporate social responsibility (CSR) in Polish businesses and social and environmental organizations, and analyzes the corresponding impact at the strategic and operational level

in these fields. It presents the status quo of CSR in Poland from three main perspectives: The first presents theoretical works based on current research and recent advances, while the next takes a closer look at empirical findings in the different fields of CSR (e.g. finance, reporting, law) and presents best practices from major international companies operating on the Polish market. Lastly, it presents a range of case studies from small and medium companies and NGOs in Poland and gives an outlook on the future development. Readers will benefit from an in-depth discussion of the opportunities and challenges that businesses and organizations in Poland are currently facing with regard to traditional national values and the influx of new cultural and social dimensions and patterns produced by international businesses entering the Polish market. Taken together, the lessons learned, case studies and snapshots of the latest developments provide a comprehensive overview of the state of the art of CSR in Poland, as well as a blueprint that can be applied to other Eastern European countries.

Entrepreneurial Process and Social Networks Alain Fayolle, Sarah L. Jack, Wadid Lamine, Didier Chabaud, 2016-07-27 Entrepreneurship is undoubtedly a social process and creating a firm requires both the mobilization of social networks and the use of social capital. This book addresses the gap that exists between the need to take these factors into consideration and the understanding of how network relationships are developed and transformed across the venturing process.

Sustainable Urbanism in Developing Countries Uday Chatterjee, Arindam Biswas, Jenia Mukherjee, 2022 The mushrooming of illegal housing on the periphery of cities is one of the main consequences of rapid urbanisation associated with social and environmental problems in the developing countries. *Sustainable Urbanism in Developing Countries* discusses the linkage between urbanism and sustainability and how sustainable urbanism can be implemented to overcome the problems of housing and living conditions in urban areas. Remote Sensing and Global Environmental Change Sam J. Purkis, Victor V. Klemas, 2011-03-03 Remote Sensing plays a key role in monitoring the various manifestations of global climate change. It is used routinely in the assessment and mapping of biodiversity over large areas, in the monitoring of changes to the physical environment, in assessing threats to various components of natural systems, and in the identification of priority areas for conservation. This book presents the fundamentals of remote sensing technology, but rather than containing lengthy explanations of sensor specifications and

operation, it concentrates instead on the application of the technology to key environmental systems. Each system forms the basis of a separate chapter, and each is illustrated by real world case studies and examples. Readership The book is intended for advanced undergraduate and graduate students in earth science, environmental science, or physical geography taking a course in environmental remote sensing. It will also be an invaluable reference for environmental scientists and managers who require an overview of the use of remote sensing in monitoring and mapping environmental change at regional and global scales. Human Perception of Visual Information Bogdan Ionescu, Wilma A. Bainbridge, Naila Murray, 2022-01-01 Recent years have witnessed important advancements in our understanding of the psychological underpinnings of subjective properties of visual information, such as aesthetics, memorability, or induced emotions. Concurrently, computational models of objective visual properties such as semantic labelling and geometric relationships have made significant breakthroughs using the latest achievements in machine learning and large-scale data collection. There has also been limited but important work exploiting these breakthroughs to improve computational modelling of subjective visual properties. The time is ripe to explore how advances in both of these fields of study can be mutually enriching and lead to further progress. This book combines perspectives from psychology and machine learning to showcase a new, unified understanding of how images and videos influence high-level visual perception - particularly interestingness, affective values and emotions, aesthetic values, memorability,

novelty, complexity, visual composition and stylistic attributes, and creativity. These human-based metrics are interesting for a very broad range of current applications, ranging from content retrieval and search, storytelling, to targeted advertising, education and learning, and content filtering. Work already exists in the literature that studies the psychological aspects of these notions or investigates potential correlations between two or more of these human concepts. Attempts at building computational models capable of predicting such notions can also be found, using state-of-the-art machine learning techniques. Nevertheless their performance proves that there is still room for improvement, as the tasks are by nature highly challenging and multifaceted, requiring thought on both the psychological implications of the human concepts, as well as their translation to machines.

Geospatial Technology and Smart Cities Poonam Sharma, 2021-07-06 This book presents fundamental and applied research in developing geospatial modeling solutions to manage the challenges that urban areas are facing today. It aims to connect the academics, researchers, experts, town planners, investors and government officials to exchange ideas. The areas addressed include urban heat island analysis, urban flood vulnerability and risk mapping, green spaces, solar energy, infrastructure management, among others. The book suggests directions for smart city research and outlines practical propositions. As an emerging and critical area of research and development, much research is now being done with regard to cities. At the international level and in India alike, the “smart cities” concept is a vital topic for universities and research centers, and well as for civic bodies, town planners and policymakers. As such, the book offers a valuable resource

for a broad readership.

Mathematics Anxiety Irene C. Mammarella, Sara Caviola, Ann Dowker, 2019-02-18 Feelings of apprehension and fear brought on by mathematical performance can affect correct mathematical application and can influence the achievement and future paths of individuals affected by it. In recent years, mathematics anxiety has become a subject of increasing interest both in educational and clinical settings. This ground-breaking collection presents theoretical, educational and psychophysiological perspectives on the widespread phenomenon of mathematics anxiety. Featuring contributions from leading international researchers, Mathematics Anxiety challenges preconceptions and clarifies several crucial areas of research, such as the distinction between mathematics anxiety from other forms of anxiety (i.e., general or test anxiety); the ways in which mathematics anxiety has been assessed (e.g. throughout self-report questionnaires or psychophysiological measures); the need to clarify the direction of the relationship between math anxiety and mathematics achievement (which causes which). Offering a revaluation of the negative connotations usually associated with mathematics anxiety and prompting avenues for future research, this book will be invaluable to academics and students in the field psychological and educational sciences, as well as teachers working with students who are struggling with mathematics anxiety

Small Group Research Herbert H. Blumberg, 2009 This book provides comprehensive coverage of recent research in psychology relating to small groups. Major new work is

described and thousands of studies are at least cited within a logical framework. A thorough overview of the field is provided and specialists concerned with particular kinds of groups are likely to find references to all major research in their areas. The findings of various studies contain many surprises, especially with regard to the generality and specificity of previously known principles. Particular emphasis is given to studies involving - or having fairly immediate relevance to - face-to-face social interaction.

Attachment Ross A. Thompson,Jeffrey A. Simpson,Lisa J. Berlin,2021-02-23 The ongoing growth of attachment research has given rise to new perspectives on classic theoretical questions as well as fruitful new debates. This unique book identifies nine central questions facing the field and invites leading authorities to address them in 46 succinct chapters. Multiple perspectives are presented on what constitutes an attachment relationship, the best ways to measure attachment security, how internal working models operate, the importance of early attachment relationships for later behavior, challenges in cross-cultural research, how attachment-based interventions work, and more. The concluding chapter by the editors delineates points of convergence and divergence among the contributions and distills important implications for future theory and research.

The Laughing Baby Caspar Addyman,2020-04-16 Few things in life are more delightful than sharing in the laughter of a baby. Until now, however, psychologists and parenting experts have largely focused on moments of stress and confusion. Developmental psychologist Caspar Addyman decided to change that. Since 2012 Caspar has run the Baby Laughter project, collecting data, videos and stories from parents all over the world. This has provided a fascinating window into what babies are learning and how they develop

cognitively and emotionally. Deeper than that, he has observed laughter as the purest form of human connection. It creates a bond that parents and infants share as they navigate the challenges of childhood. Moving chronologically through the first two years of life, *The Laughing Baby* explores the origin story for our incredible abilities. In the playful daily lives of babies, we find the beginnings of art, science, music and happiness. Our infancy is central to what makes us human, and understanding why babies laugh is key to understanding ourselves.

Statistics and Experimental Design for Psychologists Rory Allen, 2017-08-28 This is the first textbook for psychologists which combines the model comparison method in statistics with a hands-on guide to computer-based analysis and clear explanations of the links between models, hypotheses and experimental designs. Statistics is often seen as a set of cookbook recipes which must be learned by heart. Model comparison, by contrast, provides a mental roadmap that not only gives a deeper level of understanding, but can be used as a general procedure to tackle those problems which can be solved using orthodox statistical methods. *Statistics and Experimental Design for Psychologists* focusses on the role of Occam's principle, and explains significance testing as a means by which the null and experimental hypotheses are compared using the twin criteria of parsimony and accuracy. This approach is backed up with a strong visual element, including for the first time a clear illustration of what the F-ratio actually does, and why it is so ubiquitous in statistical testing. The book covers the main statistical methods up to multifactorial and repeated measures, ANOVA and the basic experimental designs associated with them. The associated online supplementary material extends this coverage to multiple regression,

exploratory factor analysis, power calculations and other more advanced topics, and provides screencasts demonstrating the use of programs on a standard statistical package, SPSS. Of particular value to third year undergraduate as well as graduate students, this book will also have a broad appeal to anyone wanting a deeper understanding of the scientific method. Contents: What is Science? Comparing Different Models of a Set of Data Testing Hypotheses and Recording the Result: Types of Validity Basic Descriptive Statistics (and How Pierre Laplace Saved the World) Bacon's Legacy: Causal Models, and How to Test Them How Hypothesis Testing Copes with Uncertainty: The Legacy of Karl Popper and Ronald Fisher Gaussian Distributions, the Building Block of Parametric Statistics Randomized Controlled Trials, the Model T Ford of Experiments The Independent Samples t-Test, the Analytical Engine of the RCT Generalising the t-Test: One-Way ANOVA Multifactorial Designs and Their ANOVA Counterparts Repeated Measures Designs, and Their ANOVA Counterparts Appendices: On Finding the Right Effect Size Why Orthogonal Contrasts are Useful Mathematical Justification for the Occam Line Glossary Further Reading References Index Readership: Students of undergraduate and graduate level psychology, and academics involved in research.
