*Handbook of Reinforcement Learning and Control* Kyriakos G. Vamvoudakis, Yan Wan, Frank L. Lewis, Derya Cansever, 2021-06-23 This handbook presents state-of-the-art research in reinforcement learning, focusing on its applications in the control and game theory of dynamic systems and future directions for related research and technology. The contributions gathered in this book deal with challenges faced when using learning and adaptation methods to solve academic and industrial problems, such as optimization in dynamic environments with single and multiple agents, convergence and performance analysis, and online implementation. They explore means by which these difficulties can be solved, and cover a wide range of related topics including: deep learning; artificial intelligence; applications of game theory; mixed modality learning; and multi-agent reinforcement learning. Practicing engineers and scholars in the field of machine learning, game theory, and autonomous control will find the Handbook of Reinforcement Learning and Control to be thought-provoking, instructive and informative.

**Catholicism, Race and Empire** Richard

Cleminson,2014-09-01 This monograph places the science and ideology of eugenics in early twentieth century Portugal in the context of manifestations in other countries in the same period. The author argues that three factors limited the impact of eugenics in Portugal: a low level of institutionalization, opposition from Catholics and the conservative nature of the Salazar regime. In Portugal the eugenic science and movement were confined to three expressions: individualized studies on mental health, often from a 'biotypological' perspective; a particular stance on racial miscegenation in the context of the substantial Portuguese colonial empire; and a diffuse model of social hygiene, maternity care and puericulture.

**Therapeutic Strategies in Cerebral Ischemia** David S. Liebeskind,2011 To date, systemic thrombolysis remains the only proven strategy to reverse stroke and its success has been limited. Edited by Liebeskind (neurology, U. of California, Los Angeles), who is also the author of three papers, this volume explores other therapies just beginning to be used or currently under development. A sample of topics includes venous steal in cerebral ischemia, systemic hemodynamic therapies for acute ischemic stroke, causes and treatment of hemorrhagic transformation, and translational hurdles in novel stroke therapies. **The Modern Sovereign** Joseph Tonda,2021 The Modern Sovereign, a notion indebted both to Hobbes's Leviathan and Marx's conception of capital, refers to the power that governed

the African multitudes from the earliest colonial days to the post-colonial era. It is an internalized power, responsible for the multiform violence exerted on bodies and imaginations. Joseph Tonda contends that in Central Africa--and particularly in Gabon and the Congo--the body is at the heart of political, religious, sexual, economic, and ritual power. This, he argues, is confirmed by the strong link between corporeal and political matters, and by the ostentatious display of bodies in African life. The body of power asserts itself as both matter and spirit, and it incorporates the seductive force of money, commodities, sex, and knowledge. Tonda's incisive analysis reveals how this sovereign power is a social relation, historically constituted by the violence of the African cultural Imaginary and the realities of State, Market, and Church. It is to be understood, he asserts, through a generalized theory economic, political, and religious fetishism. By introducing this crucial critical voice from contemporary Africa into the English language, *The Modern Sovereign* makes a significant contribution to field of anthropology, political science, and African studies.

*Prostate Cancer and Bone Metastasis* James P. Karr, Hidetoshi Yamanaka, 2012-12-06 The biology of solid tumor metastasis has been the subject of significant scientific and clinical interest for years and while experimental evidence reveals that metastasis is not solely a random event, very little is known about the biology of metastasis originating from prostate cancer. This is in spite of the fact that the majority of prostate cancer patients die with metastatic lesions to the bone. Progress in understanding this most important aspect of prostate cancer has been hampered by the lack of suitable animal models and an inability to accurately quantify bone metastases and their responses to therapy. Over the past decade, scientists in Japan and the United States have steadily advanced our understanding of the cellular, molecular and immunologic biology of primary and disseminated prostate cancer. It is this body of new information, combined with

advances in imaging techniques and prostate cancer tumor markers, that prompted the need for an in-depth assessment of bone metastasis of prostate cancer. Accordingly, on December 12, 1990, a group of basic and clinical investigators from Japan and the United States convened in Gotenba, Japan, to hold the first conference devoted solely to the basic biology and clinical aspects of bone metastases originating from prostate cancer. The cross-fertilization of ideas that was fostered through in-depth discussion of technological advances among various basic and clinical disciplines not only further advanced our understanding of prostate metastases to the bone, but suggested approaches for precise quantitative assessment of these lesions and their treatment.

Balancing Cultures Jerry Takigawa, 2021-04 *Balancing Cultures* is a personal narrative project that reflects the institutional racism and xenophobia endemic in America today. The discovery of old family photographs compelled me to express the impact on my family that resulted from their incarceration in WWII American concentration camps. The stories contained in this narrative humanize the historical record. If silence sanctions, communication is resistance. I am giving voice to the story my family kept hidden. The process of researching and creating these images greatly informed my understanding of what happened in the past--and of human rights abuses today. These images are a reminder of injustices that result from hysteria, racism, and

economic exploitation. As a third generation Japanese American born after the camps, I was spared bitterness by the gift of my family's silence about these injustices. But their silence betrayed the gravity of the legacy I inherited. For the first time I felt the shame, anger, and fear they experienced. The title, *Balancing Cultures*, derives from my personal struggle to reconcile Japanese and American cultural attributes. Growing up, I was admonished to be American--concurrently, Japanese values were instilled. This project seeks to balance this contradiction. Decades have passed since Executive Order 9066 was enacted. Many Americans are only now learning of this tragedy. There is no scientific basis for race; race and racism are social constructs. *Balancing Cultures* recalls a dark chapter in American history--censored in part by the Japanese precept of *gaman* (enduring the seemingly unbearable with patience and dignity) and the fear that if their voices were too loud, it might happen again. I raise my voice today because it is happening again.

Scaling of Structural Strength Zdenek P. Bazant, 2005-06-28

This book is concerned with a leading-edge topic of great interest and importance, exemplifying the relationship between experimental research, material modeling, structural analysis and design. It focuses on the effect of structure size on structural strength and failure behaviour. Bazant's theory has found wide application to all quasibrittle materials, including rocks, ice, modern fiber composites and tough ceramics. The topic of energetic scaling, considered controversial until recently, is finally getting the attention it deserves, mainly as a result of Bazant's pioneering work. In this new edition an extra section of data and new appendices covering twelve new application developments are included. The first book to show the 'size effect' theory of structure size on strength Presents the principles and applications of Bazant's pioneering work on structural strength Revised edition with new material on topics including asymptotic matching, flexural strength of fiber-composite laminates,

polymeric foam fractures and the design of reinforced concrete beams

*The Islamic Coins* George Carpenter Miles,1962 All but 9 of the 6,449 Islamic coins found at Athenian Agora up to the date when this book was written belong to the Ottoman period. The earliest datable Ottoman coin is from the reign of Mehmed I (1413-21). Most of the coins come from overseas mints such as those of Istanbul, Cairo, Macedonia, Serbia, and Bosnia. Although the name of Athens cannot be read on any coin, the author thinks that many of the crude coppers of the 15th to 16th centuries A.D. were locally struck.

*Spinal Deformity* Praveen V. Mummaneni, MD, Lawrence Lenke, MD, Regis Haid, M.D., 2008-01-30 The challenge of treating complex spinal deformity often demands innovative solutions and greater skill than the initial surgical intervention; strategic planning is the critical element in successful surgical execution and outcome. *Spinal Deformity: A Guide to Surgical Planning and Management*, edited and written by the leading experts, is a landmark publication that provides critical information needed to safely plan, stage, and execute operations for the full range of complex spinal deformities. A Virtual Gold Mine of Information This book is an invaluable and practical tool for managing spinal deformities in your practice. Organized into four parts, it begins with a focus on recent advances in spine technology, starting with biomechanics, deformity classification, conservative management, and surgical indications. Subsequent chapters discuss technologic innovations, including spinal biologics, image guidance, and minimally invasive approaches for anterior and posterior spinal fusion. This introductory section is essential reading for the surgeon learning basic technique as well as for the experienced surgeon seeking to refine and enhance skills. The remaining parts focus on state-of-the-art surgical techniques for treating spinal

deformity in the cervical spine, the thoracic spine, and the lumbosacral spine. Specific chapters have also been included on managing deformities at the cervicothoracic, thoracolumbar, and lumbosacropelvic junctions. In addition, both open and minimally invasive techniques are described. Organized with a consistent format, each technique chapter includes information on indications, planning and assessment, clinical problem solving, surgical technique, and postoperative care. A Who's Who of Spine Surgery The editors, Drs. Mummaneni, Lenke, and Haid; the part editors, Drs. Benzel, Kuklo, Resnick, and Shaffrey; and the contributors are world-renowned both neurosurgeons and orthopedic surgeons who have extensive experience in treating spinal deformity. Algorithms, Surgical Plans, and Tips and Tricks Aid in the Decision-Making Process Beautifully illustrated with step-by-step surgical technique, this book provides the practical advice, clinical nuances, and learning aids to assist you in the diagnosis and treatment of complex surgical deformities. Numerous imaging modalities are used to demonstrate the preoperative presentation as well as postoperative results. In addition, clinical problem-solving sections with treatment algorithms guide you in selecting the best surgical approach for each patient. Hundreds of case examples demonstrate the excellent results that can be achieved. To enhance the learning experience, an accompanying DVD with operative video is included.
