Web Page Recommendation Models Sule Gunduz-Oguducu,2022-06-01 One of the application areas of data mining is the World Wide Web (WWW or Web), which serves as a huge, widely distributed, global information service for every kind of information such as news, advertisements, consumer information, financial management, education, government, e-commerce, health services, and many other information services. The Web also contains a rich and dynamic collection of hyperlink information, Web page access and usage information, providing sources for data mining. The amount of information on the Web is growing rapidly, as well as the number of Web sites and Web pages per Web site. Consequently, it has become more difficult to find relevant and useful information for Web users. Web usage mining is concerned with guiding the Web users to discover useful knowledge and supporting them for decision-making. In that context, predicting the needs of a Web user as she visits Web sites has gained importance. The requirement for predicting user needs in order to guide the user in a Web site and improve the usability of the Web site can be addressed by recommending pages to the user that are related to the interest of the user at that time. This monograph gives an overview of the research in the area of discovering and modeling the users' interest in order to recommend related Web pages. The Web page recommender systems studied in this monograph are categorized according to the data mining algorithms they use for recommendation. Information Networking Ilyoung Chong,2002-09-18 The papers comprising Vol. I and Vol. II were prepared for and presented at the International Conference on Information Networking 2002 (ICOIN 2002), which was held from January 30 to February 1, 2002 at Cheju Island, Korea. It was organized by the KISS (Korean Information Science Society) SIGIN in Korea, IPSJ SIG DPE (Distributed Processing Systems) in Japan, the ITRI (Industrial Technology Research Institute), and National Taiwan University in Taiwan. The papers were selected through two steps, refereeing and presentation review. We selected for the theme of the conference the motto "One World of Information

Networking". We did this because we believe that networking will transform the world into one zone, in spite of different ages, countries and societies. Networking is in the main stream of everyday life and affects directly millions of people around the world. We are in an era of tremendous excitement for professionals working in many aspects of the converging networking, information retailing, entertainment, and publishing companies. Ubiquitous communication and computing technologies are changing the world. Online communities, e commerce, e service, and distance learning are a few of the consequences of these technologies, and advanced networking will develop new applications and technologies with global impact. The goal is the creation of a world wide distributed computing system that connects people and appliances through wireless and high bandwidth wired channels with a backbone of computers that serve as databases and object servers. Thus, Vol.

Topology of Digital Images James F. Peters,2014-01-28 This book carries forward recent work on visual patterns and structures in digital images and introduces a near set-based a topology of digital images. Visual patterns arise naturally in digital images viewed as sets of non-abstract points endowed with some form of proximity (nearness) relation. Proximity relations make it possible to construct uniform topologies on the sets of points that constitute a digital image. In keeping with an interest in gaining an

understanding of digital images themselves as a rich source of patterns, this book introduces the basics of digital images from a computer vision perspective. In parallel with a computer vision perspective on digital images, this book also introduces the basics of proximity spaces. Not only the traditional view of spatial proximity relations but also the more recent descriptive proximity relations are considered. The beauty of the descriptive proximity approach is that it is possible to discover visual set patterns among sets that are non-overlapping and non-adjacent spatially. By combining the spatial proximity and descriptive proximity approaches, the search for salient visual patterns in digital images is enriched, deepened and broadened. A generous provision of Matlab and Mathematica scripts are used in this book to lay bare the fabric and essential features of digital images for those who are interested in finding visual patterns in images. The combination of computer vision techniques and topological methods lead to a deep understanding of images.

Minority Soldiers Fighting in World War I Derek Miller,2017-07-15 During WWI, American minority soldiers fought in segregated units under white American officers. Some of these units fell under American command and others under French command. There was a marked difference in the way that these soldiers were treated, often French commanders extended a level of respect to their minority troops that American commanders did not. The difference in soldiers experiences was symptomatic of the racism minorities faced on the home front. This book looks at the valor of minority soldiers, what life was like before and after the war, and the way cultural shifts began when minority soldiers fought alongside Europeans.

<u>Creating Digital Exhibits for Cultural Institutions</u> Emily Marsh,2023-03-28 Creating Digital Exhibits for Cultural Institutions will show you how to create digital exhibits and experiences for your users that will be informative, accessible and engaging. Illustrated with real-world examples of digital exhibits from a range of GLAMs, the book addresses the many analytical aspects and practical considerations involved in the creation of such exhibits. It will support you as you go about: analyzing content to find hidden themes, applying principles from the museum exhibit literature, placing your content within internal and external information ecosystems, selecting exhibit software, and finding ways to recognize and use your own creativity. Demonstrating that an exhibit provides a useful and creative connecting point where your content, your organization, and your audience can meet, the book also demonstrates that such exhibits can provide a way to revisit difficult and painful material in a way that includes frank and enlightened analyses of issues such as racism, colonialism, sexism, class,

and LGBTQI+ issues. Creating Digital Exhibits for Cultural Institutions is an essential resource for librarians, archivists, and other cultural heritage professionals who want to promote their institution's digital content to the widest possible audience. Academics and students working in the fields of library and information science, museum studies and digital humanities will also find much to interest them within the pages of this book.
