Operator Theoretic Aspects of Ergodic Theory Tanja Eisner,Bálint Farkas,Markus Haase,Rainer Nagel,2015-11-18 Stunning recent results by Host-Kra, Green-Tao, and others, highlight the timeliness of this systematic introduction to classical ergodic theory using the tools of operator theory. Assuming no prior exposure to ergodic theory, this book provides a modern foundation for introductory courses on ergodic theory, especially for students or researchers with an interest in functional analysis. While basic analytic notions and results are reviewed in several appendices, more advanced operator theoretic topics are developed in detail, even beyond their immediate connection with ergodic theory. As a consequence, the book is also suitable for advanced or special-topic courses on functional analysis with applications to ergodic theory. Topics include: • an intuitive introduction to ergodic theory • an introduction to the basic notions, constructions, and standard examples of topological dynamical systems • Koopman operators, Banach lattices, lattice and algebra homomorphisms, and the Gelfand-Naimark theorem • measure-preserving dynamical systems • von Neumann's Mean Ergodic Theorem and Birkhoff's Pointwise Ergodic Theorem • strongly and weakly mixing systems • an examination of notions of isomorphism for measure-preserving systems • Markov operators, and the related concept of a factor of a measure preserving system • compact groups and semigroups, and a powerful tool in their study, the Jacobs-de Leeuw-Glicksberg decomposition • an introduction to the spectral theory of dynamical systems, the theorems of Furstenberg and Weiss on multiple recurrence, and applications of dynamical systems to combinatorics (theorems of van der Waerden, Gallai,and Hindman, Furstenberg's Correspondence Principle, theorems of Roth and Furstenberg-Sárközy) Beyond its use in the classroom, Operator Theoretic Aspects of Ergodic Theory can serve as a valuable foundation for doing research at the intersection of ergodic theory and operator theory

Texts from the "Archive" of Socrates, the Tax Collector, and Other Contexts at Karanis Mohamed Gaber El-Maghrabi,Cornelia Römer,2015-01-01 This volume contains 25 papyri, which were excavated in the village of Karanis in the north-eastern Fayum by American archaeologists (1924-1926). Half of the new texts are literary, mostly from the library of the tax collector Socrates; the others are documents that can shed new light on the activities of the tax collector or of other inhabitants of Karanis. They give us a vivid picture of village life in Graeco-Roman Egypt in the 2nd century AD.

Japanese Missions to the International Space Station John O'Sullivan,2019-03-23 Japan has a rich history of human spaceflight, flying in space with both NASA and the Soviet/Russian space agencies over the years. This book tells the story of the JAXA astronauts who have visited the International Space Station and how they have lived on board, helped construct the space laboratory and performed valuable scientific experiments. JAXA has contributed the largest single module to the ISS: the Kibō (Hope) science laboratory with its Logistics Module, Exposed Facility and robot arm. JAXA supplies the station with cargo and supplies on its automated cargo spacecraft, the H-II Transfer Vehicle (HTV), but it is the human endeavour that captures the imagination. From brief visits to six-month expeditions, from spacewalking to commanding the Earth's only outpost in space, JAXA astronauts have played a vital role in the international project. Extensive use of colour photographs from NASA and JAXA depicting the experiments carried out and the phases of the ISS construction, together with the personal stories of the astronauts' experiences in space, highlight the crucial part the Japanese have played in human spaceflight.

Local Entropy Theory of a Random Dynamical System Anthony H. Dooley, Guohua Zhang,2014-12-20 In this paper the authors extend the notion of a continuous bundle random dynamical system to the setting where the action of R or N is replaced by the action of an infinite countable discrete amenable group. Given such a system, and a monotone sub-additive invariant family of random continuous functions, they introduce the concept of local fiber topological pressure and establish an associated variational principle, relating it to measure-theoretic entropy. They also discuss some variants of this variational principle. The authors introduce both topological and measure-theoretic entropy tuples for continuous bundle random dynamical systems, and apply variational principles to obtain a relationship between these of entropy tuples. Finally, they give applications of these results to general topological dynamical systems, recovering and extending many recent results in local entropy theory.

Logic Without Borders Åsa Hirvonen,Juha Kontinen,Roman Kossak,Andrés Villaveces,2015-03-10 In recent years, mathematical logic has developed in many directions, the initial unity of its subject matter giving way to a myriad of seemingly unrelated areas. The articles collected here, which range from historical scholarship to recent research in geometric model theory, squarely address this development. These articles also connect to the diverse work of Väänänen, whose ecumenical approach to logic reflects the unity of the discipline.

Scandinavian Song Anna Hersey,2016-08-11 Scandinavian art songs are a unique expression of the cultures of Sweden, Norway, and Denmark. Although these three countries are distinct from one another, their languages and cultures share many similarities. Common themes found in art and literature include a love of nature, especially of the sea, feelings of longing and melancholy, the contrast between light and dark, the extremes of the northern climate, and lively folk traditions. These shared sensibilities are reflected and expressed in a tangible way through music. Scandinavian art song has faced several challenges over the years in North America (even in the American Midwest, where descendants of Scandinavian immigrants are concentrated). But matters have changed recently with the recent expansion of diction curricula to cover languages other than English, French, German, and Italian. The primary obstacle remains practical resources for the study of art songs and lyric diction of Sweden, Norway, and Denmark. This guide remedies this problem. Scandinavian Song is a practical guide to the art songs of Sweden, Norway, and Denmark. Unlike other sources that give at best a cursory overview of lyric diction in the Scandinavian languages, this guide provides practical information, enabling teachers and students to render transcriptions of Swedish, Norwegian, and Danish texts into the International Phonetic Alphabet (IPA)—an absolute necessity for any study of repertoire. An extensive survey of available music, sample IPA transcriptions and translations, as well as a website link with native speakers reciting selected song texts, make this book an invaluable resource for students and professors in North American college, university, and conservatory voice programs.

Urban Agricultural Heritage Frank Lohrberg,Katharina Christenn,Axel Timpe,Ayça Sancar,2022-11-21 Urban gardening and agriculture have become important elements of sustainable urban planning in the context of persistent urbanization amid limited resources. However, a consideration of the cultural-historical dimension has been lacking up to now. The editors present the first comprehensive outline of traditional forms of food production in cities to help preserve this valuable knowledge. On the basis of current research findings, they develop new perspectives and guidelines for recognizing traditional food production systems as an aspect of cultural heritage and for dealing with urban agriculture worldwide.

American Fireboats Cristina Berna,Eric Thomsen,2023-07-31 The first fireboats from the late 18th century were tugboats, fitted with firefighting equipment. Modern fireboats are capable of pumping sometimes tens of thousands of gallons of water per minute and are very fast. Fireboats are used for fighting fires on docks and shore side warehouses or even wildfires as they can directly attack fires when close by. Fureboats also have an effectively unlimited supply of water available, pumping directly from below the hull. Fireboats are most usually seen by the public when welcoming a fleet or historical ships with a display of their water moving capabilities, throwing large arcs of water in every direction. Liberating the Mind Linda Elder,2019-12-20 Throughout history, thinkers within every part of society have been crippled by an ingrained bias toward their own views and the views of their preferred social groups. As these dangerous egocentric and sociocentric tendencies continue to pose the greatest threat to the advancement of rational societies, Liberating the Mind reveals a way forward. Dissecting the core of how humans naturally learn, think, and chose to act, internationally recognized critical thinking leader Linda Elder illuminates root causes of dysfunctional thought and shows us how to free ourselves from both selfishness and groupthink through explicit tools of rationality. This instant intellectual classic offers a cohesive, integrated theory of mind that takes into account pathological tendencies shared by all humans, while offering a clear path toward the cultivation of fairminded critical thinking throughout the world. Elder illuminates how, by taking the intrinsic problems in our thinking seriously, we can follow the example of Socrates and live the examined life, even in times of upheaval and doubt.
