Dinosaurs Mary Higby Schweitzer, Elena Rita Schroeter, Charles Doug Czajka, 2020-11-17 This textbook introduces research on dinosaurs by describing the science behind how we know what we know about dinosaurs. A wide range of topics is covered, from fossils and taphonomy to dinosaur physiology, evolution, and extinction. In addition, sedimentology, paleo-tectonics, and non-dinosaurian Mesozoic life are discussed. There is a special opportunity to capitalize on the enthusiasm for dinosaurs that students bring to classrooms to foster a deeper engagement in all sciences. Students are encouraged to synthesize information, employ critical thinking, construct hypotheses, devise methods to test these hypotheses, and come to new defensible conclusions, just as paleontologists do. Key Features Clear and easy to read dinosaur text with well-defined terminology Over 600 images and diagrams to illustrate concepts and aid learning Reading objectives for each chapter section to guide conceptual learning and encourage active reading Companion website ([teachingdinosaurs.com](http://teachingdinosaurs.com)) that includes supporting materials such as in-class activities, question banks, lists of suggested specimens, and more to encourage student participation and active learning Ending each chapter with a specific What We Don't Know section to encourage student curiosity Related Titles Singer, R. **Multimedia Content and the Semantic Web** Giorgos Stamou, Stefanos Kollias, 2005-10-31 The emerging idea of the semantic web is based on the maximum automation of the complete knowledge lifecycle processes: knowledge representation, acquisition, adaptation, reasoning, sharing and use. Text-based based browsers involve a costly information-retrieval process: descriptions are inherently subjective and usage is often confined to the specific application domain for which the descriptions were created. Automatic extracted audiovisual features are, in general, more objective, domain-independent and can be native to the audiovisual content. This book seeks to draw together in one concise volume the findings of leading researchers from around the globe. The focus, in particular, is on the MPEG-7 and MPEG-21 standards that seek to consolidate and render effective the infrastructure for the delivery and management of multimedia content. Provides thorough coverage of all relevant topics, including structure identification in audiovisual documents, object-based video indexing, multimedia indexing and retrieval using natural language, speech and image processing methods Contains detailed advice on ontology representation and querying for realizing semantics-driven applications Includes cutting-edge information on multimedia content description in MPEG-7 and MPEG-21 Illustrates all theory with real-world case studies gleaned from state-of-the-art worldwide research. The contributors are pioneers in the fields of multimedia analysis and knowledge technologies This unified, comprehensive up-to-date resource will appeal to integrators, systems suppliers, managers and consultants in the area of knowledge management and information retrieval; particularly those concerned with the automation of the semantic web. The detailed, theory-based practical advice is also essential reading for postgraduates and researchers in these fields.

**Track Two Diplomacy in Theory and Practice** Peter Jones, 2015-09-02 "Jones provides a nuanced perspective on both the promise and limits of this unheralded form of unofficial diplomacy." —Stephen J. Del Rosso, Director, International Peace and Security, Carnegie Corporation of New York Track Two diplomacy consists of informal dialogues among actors such as academics, religious leaders, retired senior officials, and NGO officials that can bring new ideas and new relationships to the official process of diplomacy. Sadly, those involved in official diplomacy often have little understanding of and appreciation for the complex and nuanced role that Track Two can play, or for its limitations. And many Track Two practitioners are often unaware of the realities and pressures of the policy and diplomatic worlds, and not particularly adept at framing their efforts to make them accessible to hard-pressed officials. At the same time, those interested in the academic study of Track Two sometimes fail to understand the realities faced by either set of practitioners. A need therefore exists for a work to bridge the divides between these constituencies and between the different types of Track Two practice—and this book crosses disciplines and traditions in order to do just that. It explores the various dimensions and guises of Track Two, the theory and practice of how they work, and how both practitioners and academics could more profitably assess Track Two. Overall, it provides a comprehensive

picture of the range of activities pursued under this title, to provoke new thinking about how these activities relate to each other, to official diplomacy, and to academe. "This book will be a classic that defines the field of Track Two diplomacy. . . . an exemplary work."—Esra Cuhadar, Bilkent University

*Multimedia Networking* Jenq-Neng Hwang, 2009-04-16 This authoritative guide is the first to provide a complete system design perspective based on existing international standards and state-of-the-art networking and infrastructure technologies, from theoretical analyses to practical design considerations. The four most critical components involved in a multimedia networking system – data compression, quality of service (QoS), communication protocols, and effective digital rights management – are intensively addressed. Many real-world commercial systems and prototypes are also introduced, as are software samples and integration examples, allowing readers to understand practical tradeoffs in the design of multimedia architectures, and get hands-on experience learning the methodologies and procedures. Balancing just the right amount of theory with practical design

and integration knowledge, this book is ideal for graduate students and researchers in electrical engineering and computer science, and also for practitioners in the communications and networking industry. It can also be used as a textbook for specialized graduate-level courses on multimedia networking.

**Opera in Performance** Clemens Risi, 2021-09-27 *Opera in Performance* elucidates the performative dimension of contemporary opera productions. What are the most striking and decisive moments in a performance? Why do we respond so strongly to stagings that transform familiar scenes, to performers' bodily presence, and to virtuosic voices as well as ill-disposed ones? Drawing on phenomenology and performance theory, Clemens Risi explains how these moments arise out of a dialogue between performers and the audience, representation and presence, the familiar and the new. He then applies these insights in critical descriptions of his own experiences of various singers, stagings, and performances at opera houses and festivals from across the German-speaking world over the last twenty years. As the first book to focus on what happens in performance as such, this study shifts our attention to moments that have eluded articulation and provides tools for describing our own experiences when we go to the opera. This book will particularly interest scholars and students in theater and performance studies, musicology, and the humanities, and may also appeal to operagoers and theater professionals.
