Landscape Gardening in Japan Josiah Conder, 1893

The Flowers and Gardens Of Japan Ella Du Cane, 2013-10-15 First Published in 2005. Japan is often called the land of flowers. This book gives an account of those flowers that occur in the country that are most remarkable for their beauty and profusion and that are most typically Japanese. There are also pages on landscape gardening.

The Old Tea Seller Baisao, 2010-06-15 Poet, Zen Buddhist priest, renowned thinker, and seller of tea — Baisao was all of these things, as well as being a bit of an eccentric. Known to carry large wicker baskets filled with tea utensils through the streets and surrounding hills of Japan's capital, Baisao set up shop wherever he ended up and brewed tea for those who came to enjoy the scenery with him. Establishing a quiet, simple life, Baisao spent his final years composing poetry, brewing tea, and teaching Zen, in the process becoming a well-loved figure. These poems, memoirs, and letters tell us more about this endearing person and trace his long life's profound spiritual journey. This comprehensive translation includes nearly all of Baisao's writings, giving us a deep look at this remarkable man.

Lonely Planet Japan Lonely Planet, Rebecca Milner, Ray Bartlett, Andrew Bender, Craig McLachlan, Kate Morgan, Simon Richmond, Tom Spurling, Benedict Walker, Wendy Yanagihara, Phillip Tang, 2017-08-01 Lonely Planet Japan is your passport to the most relevant, up-to-date advice on what to see and skip, and what hidden discoveries await you. Glycosignals in Cancer: Mechanisms of Malignant Phenotypes Koichi Furukawa, Minoru Fukuda, 2016-01-26 This book is a collection of cutting-edge studies on the functions and mechanisms of glycosylation in cancers. Along with progress in genomics and proteomics, new findings in the significance of these complex carbohydrates, through the regulation of cell signals, have been elucidated in a wide variety of biological events. This volume provides a comprehensive summary of glycosignals and their involvement in cancer, covering numerous topics such as glycosylation machineries, regulation of phenotypes, cell signaling, immune regulation, complex carbohydrate organization, and clinical applications. The contents have been organized to promote ready understanding, covering basic to clinical research and studies on micromolecules, to animal/human cells and tissues. This book is an essential read for students and young researchers interested in cancers and carbohydrates. Specialists in glycobiology will also benefit from the new results and approaches detailed here, which provide insights into future directions of functional studies of sugar chains in both basic and applied research.

Neuroglycobiology Minoru Fukuda, Urs Rutishauser, Ronald L. Schnaar, 2005 Carbohydrates play a major role in brain function. In the past decade, tremendous progress has been made in understanding their structure and function within the nervous system. This book presents a state of the art account of this rapidly expanding field.

Cell Surface Carbohydrates and Cell Development Minoru Fukuda, 1991-12-13 Cell Surface Carbohydrates and Cell Development summarizes knowledge on the structure and function of cell surface carbohydrates in development and differentiation. The chapters include reviews on the expression of cell type-specific carbohydrates and their roles in cell-cell interaction. In particular, the role of cell surface carbohydrates in immune cell response, malignant transformation, fertilization, and neural cell development are addressed. This includes the exciting discovery about the role of adhesive molecules in leukocyte-endothelium interaction. Cell Surface Carbohydrates and Cell Development also summarizes the latest knowledge on structure and biosynthesis of carbohydrates, the role of specific carbohydrate modification, and animal lectins. The book will be useful to researchers and students interested in the biology of glycoproteins and biotechnology.

Theory of Elasticity for Scientists and Engineers Teodor M. Atanackovic, Ardeshir Guran, 2012-12-06 This book is intended to be an introduction to elasticity theory. It is assumed that the student, before reading this book, has had courses in mechanics (statics, dynamics) and

strength of materials (mechanics of materials). It is written at a level for undergraduate and beginning graduate engineering students in mechanical, civil, or aerospace engineering. As a background in mathematics, readers are expected to have had courses in advanced calculus, linear algebra, and differential equations. Our experience in teaching elasticity theory to engineering students leads us to believe that the course must be problem-solving oriented. We believe that formulation and solution of the problems is at the heart of elasticity theory. Of course orientation to problem-solving philosophy does not exclude the need to study fundamentals. By fundamentals we mean both mechanical concepts such as stress, deformation and strain, compatibility conditions, constitutive relations, energy of deformation, and mathematical methods, such as partial differential equations, complex variable and variational methods, and numerical techniques. We are aware of many excellent books on elasticity, some of which are listed in the References. If we are to state what differentiates our book from other similar texts we could, besides the already stated problem-solving orientation, list the following: study of deformations that are not necessarily small, selection of problems that we treat, and the use of Cartesian tensors only.

Utagawa Hiroshige Utagawa Hiroshige, 2018-07 Tsukioka Yoshitoshi was the most influential and prolific woodblock print artist of Meiji Japan. This book presents his masterpiece: the wildly popular One Hundred Aspects of the Moon. The series was begun in 1885 and completed just before the artist's death in 1892. New designs were eagerly awaited, with editions selling out before dawn on the day of publication. The introduction of this book comprehensively treats the artist's life and work. Each of the one hundred images in the series is shown here in full color. The Tokaido gojusan tsui, created in 1845, is one of the most well-known and fascinating examples of woodblock prints inspired by the road.

Molecular Glycobiology Minoru Fukuda, Ole Hindsgaul, 1994 Particular emphasis is given to cell-type-specific carbohydrate expression and the carbohydrates and proteins involved in cell recognition. Also included is a full discussion of key experimental approaches such as chemical synthesis and the three-dimensional structural analysis of carbohydrates.

Molecular and Cellular Glycobiology Minoru Fukuda, Ole Hindsgaul, 2000 Molecular and Cellular Glycobiology covers the recent progress in understanding the biological roles of carbohydrates and includes basic knowledge of carbohydrates in mammals. Emphasis is on structure, biosynthesis and function of carbohydrates in development and disease. In particular, biological significance in immune cells, neural cells and cytoplasmic and nuclear proteins are thoroughly described. In addition, Molecular and Cellular Glycobiology updates the knowledge of diseases caused by anomalies of carbohydrate biosynthesis and the animal models used to investigate the physiological roles of carbohydrates including carbohydrates attached to lipids. Various attempts to develop therapeutic agents based on carbohydrates are also described. Molecular and Cellular Glycobiology covers recent developments in a comprehensive yet focused manner and will be of interest to anyone with a basic knowledge of carbohydrates.

Hiroshige: Visions of Japan Utagawa Hiroshige, Rossella Menegazzo, 2018 With Hokusai, Utamaro and Kuniyoshi, Utagawa Hiroshige (1797-1858) is one of the great protagonists of ukiyo-e. With respect to Hokusai, whom he constantly compared himself to, since he was around thirty years younger, Hiroshige made landscape and nature the focus of his work by instilling in the viewer a sense of harmony, serenity and peace that, still today, is universally admired. In fact, thanks to these qualities he is one of the most praised artists and is considered the master of nature. Hiroshige renders the human figure with quick, direct lines that at times call to mind manga and anime sketches, though simplified and essential. This monograph presents a selection of around 230 works from the most important series by Hiroshige, including views of famous places in the capital of Edo as well as in the farthest provinces, but also a body of work with the most admirable images portraying animals, flowers and insects plus original drawings and print plates that are still intact. This publication, which covers the Japanese master's entire career, is divided into eight themed sections that discuss the most important series in a thorough and illustrative way: Early Works; Travel Images; Flowers, Birds and the Moon; Views of Distant Places; View of the Oriental Capital;

Hiroshige: Life and Work; Hiroshige and His Print Work: Contemporaries and the West.

Tian Wen Yuan Qu,1986 Describes the historical background of the poem and poses questions about Chinese mythology and the nature of the universe.

Functional Glycomics Minoru Fukuda,2010 In this 3 volume collection focusing on glycomics, readers will appreciate how such discoveries were made and how such methods can be applied for readers' own research efforts Each chapter has been designed so that enough scientific background will be given in each chapter for further development of methods by readers themselves. Useful for all levels of scientists starting from the last years of colleges, graduate students, postdoctoral fellows to professors and to all levels of scientists in research institutes including industry.

Hiroshige's Journey in the 60-odd Provinces Marije Jansen,2004 Utagawa Hiroshige (1797-1858) designed a series of seventy landscapes depicting the provinces of Japan between 1854 and 1856. It was the first in a number of sets from the highly productive years of his later life. The designs comprising Famous Places in the 60-Odd Provinces (Rokuju yoshu meisho zue) are taken from all corners of Japan, thus representing an enormous innovation in the choice of subject matter. Large sets published before this had depicted the famous routes between Edo and Kyoto, the Tokaido and the Kisokaido, but Hiroshige had never before ventured beyond these well-known themes/ The Japanese countryside was already depicted in graphic art, but mostly in travelers' guidebooks and not as full color prints. With this set, Hiroshige brought the Japanese countryside closer to the urban population. It evidently met with high acclaim: the publisher Koshimuraya Heisuke produced a large number of impressions. In this study, the author Marije Jansen briefly discusses Hiroshige's life and the formal aspects of this series. Jansen takes as her point of departure the set in possession of the German collector Gerhard Pulverer, which is generally acknowledged to be a superb example of a first edition, and compares this series to a number of other sets in public and private collections. The detectable printing variations in each design are carefully analyzed, making this an indispensable tool for collectors.

Glycobiology Minoru Fukuda,Akira Kobata, This is an introduction to the basic methods used in the analysis of the structure of glycans attached to glycoproteins. Such methods include the isolation, fractionation and structural analysis of glycans by conventional and sophisticated techniques, such as mass spectrometry.

Hiroshige Prints Ando Hiroshige,1988 Exquisite depictions of romantically idealized landscapes from woodcut master's superb Fifty-three Stages on the Tokaido. Reproduced from the Collection of the Elvehjem Museum of Art. Includes The Bridge on the Toyo River, The Ferryboat at Rokugo, The Junction of the Pilgrims' Road and Mt. Fuji in the Morning from Hara.
