Images in the Moon and in the Stars Aha! Richard Burrill,2000

The Moon Beth Alesse,2019-08-15 The Moon: NASA Images from Space, includes images from the National Aeronautics and Space Administration(NASA), European Space Agency (ESA), and other international space explorations. Early images show the very first Apollo missions to the Moon using film in a Hasselblad camera. NASA illustrations explain the Moon's tidal forces on the Earth's oceans, seas, and land mass, the Moon's phases as seen from Earth, the lunar geography, and Moon's composition. This book shows detailed maps of the Moon's surface: its incredible craters, ancient lava flows, plains, seas, and mountains. Included is speculation about the Moon's origin and its historical place in our solar system. Humanities future plans for lunar exploration and habitation are discussed. Can humans live there, and how? This book is a comprehensively illustrated collection of lunar visuals of over 150 images

Light for the blind William Moon,1873

The Moon Carpenter James,2018-01-04 Carpenter James wrote this book in the 90's and it is a classic book about the moon. It was produced from digital images created through the libraries' mass digitization efforts. The digital images were cleaned and prepared for printing through automated processes. Despite the cleaning process, occasional flaws may still be present that were part of the original work itself, or introduced during digitization.

Full Moon Michael Light,Andrew Chaikin,1999 The most thrilling of all journeys--the missions of the Apollo astronauts to the surface of the Moon and back--yielded 32,000 extraordinarily beautiful photographs, the record of a unique human achievement. Until recently, only a handful of these photographs had been released for publication; but now, for the first time, NASA has allowed a selection of the master negatives and transparencies to be scanned electronically, rendering the sharpest images of space that we have ever seen. Michael Light has woven 129 of these stunningly clear images into a single composite voyage, a narrative of breathtaking immediacy and authenticity that begins with the launch and is followed by a walk in space, an orbit of the Moon, a lunar landing and exploration, and a return to Earth with an orbit and splashdown. Graced by five 45-inch-wide gatefolds that display the lunar landscape, from above the surface and at eye level, in unprecedented detail and clarity, Full Moon conveys on each page the excitement, disorientation, and awe that the astronauts themselves felt as they were shot into space and then as they explored an alien landscape and looked back at their home planet from hundreds of thousands of miles away. Published on the thirtieth anniversary of Apollo 11--the first landing on the Moon--this remarkable and mesmerizing volume is, like the voyages it commemorates and re-creates, an experience both intimate and monumental.

New Views of the Moon Bradley L. Jolliff,Mark A. Wieczorek,Charles K. Shearer,Clive R. Neal,2018-12-17 Volume 60 of Reviews in Mineralogy and Geochemistry assesses the current state of knowledge of lunar geoscience, given the data sets provided by missions of the 1990's, and lists remaining key questions as well as new ones for future exploration to address. It documents how a planet or moon other than the world on which we live can be studied and understood in light of integrated suites of specific kinds of information. The Moon is the only body other than Earth for which we have material samples of known geologic context for study. This volume seeks to show how the different kinds of information gained about the Moon relate to each other and also to learn from this experience, thus allowing more efficient planning for the exploration of other worlds.

The Moon: Considered As a Planet, a World, and a Satellite James Nasmyth,2023-11-15 Reprint of the original, first published in 1874.

The Moon David Schunk,Burton Sharpe,Bonnie L. Cooper,Madhu Thangavelu,2007-11-27 This extraordinary book details how the Moon could be used as a springboard for Solar System exploration. It presents a realistic plan for placing and servicing telescopes on the Moon, and highlights the use of the Moon as a base for an early warning system from which to combat threats of near-Earth objects. A realistic vision of human development and settlement of the Moon over the next one hundred years is presented, and the author explains how global living standards for the Earth can be enhanced through the use of lunar-based generated solar power. From that beginning, the people of the Earth would evolve into a spacefaring civilisation.

Sevенеves Neal Stephenson,2015-05-19 From the #1 New York Times bestselling author of Anathem, Reamde, and Cryptonomicon comes an exciting and thought-provoking science fiction epic—a grand story of annihilation and survival spanning five thousand years. What would happen if the world were ending? A catastrophic event renders the earth a ticking time bomb. In a feverish race against the inevitable, nations around the globe band together to devise an ambitious plan to ensure the survival of humanity far beyond our atmosphere, in outer space. But the complexities and unpredictability of human nature coupled with unforeseen challenges and dangers threaten the intrepid pioneers, until only a handful of survivors remain . . . Five thousand years later, their progeny—seven distinct races now three billion strong—embark on yet another audacious journey into the unknown . . . to an alien world utterly transformed by cataclysm and time: Earth. A writer of dazzling genius and imaginative vision, Neal Stephenson combines science, philosophy, technology, psychology, and literature in a magnificent work of speculative fiction that offers a portrait of a future that is both extraordinary and eerily recognizable. As he did in Anathem, Cryptonomicon, the Baroque Cycle, and Reamde, Stephenson explores some of our biggest ideas and perplexing challenges in a breathtaking saga that is daring, engrossing, and altogether brilliant.
