Stargazer Girl Stargazer Press,T R Woodman,2019-05-28 Book 4 finale of the completed 4 book series. A determined girl will cross the galaxy, risking everything she holds dear to find the one thing that's missing ... Pursuing answers to mysteries has led Evelyn to being kidnapped, imprisoned, tortured, poisoned, battling bionic super-soldiers and sea monsters, and maybe worst of all ... other teenage girls. So, when she is confronted with another mystery involving the same colonists who have ridiculed, hunted and exiled her, she's certain it will bring nothing but heartache. But her head can't convince her heart of this truth. Even though she finally has everything she wants-freedom to trek the galaxy; the respect, if not the admiration of the colonists; the boy, her first friend and first love-the aching void in her chest tells her that something is still missing. So, with thoughts and feelings she cannot explain to herself, let alone to those she loves, Evelyn will throw herself into another mystery-one that will span the galaxy and may cost her everything she holds most dear, all with the hope she'll find that 'something' that's missing ... a place to call home. Stargazer Girl is the book 4 finale in T.R. Woodman's young-adult sci-fi series.

The Anime Machine Thomas Lamarre, 2013-11-30 Despite the longevity of animation and its significance within the history of cinema, film theorists have focused on live-action motion pictures and largely ignored hand-drawn and computer-generated movies. Thomas Lamarre contends that the history, techniques, and complex visual language of animation, particularly Japanese animation, demands serious and sustained engagement, and in *The Anime Machine* he lays the foundation for a new critical theory for reading Japanese animation, showing how anime fundamentally differs from other visual media. The *Anime Machine* defines the visual characteristics of anime and the meanings generated by those specifically “animetic” effects—the multiplanar image, the distributive field of vision, exploded projection, modulation, and other techniques of character animation—through close analysis of major films and television series, studios, animators, and directors, as well as Japanese theories of animation. Lamarre first addresses the technology of anime: the cells on which the images are drawn, the animation stand at which the animator works, the layers of drawings in a frame, the techniques of drawing and blurring lines, how characters are made to move. He then examines foundational works of anime, including the films and television series of Miyazaki Hayao and Anno Hideaki, the multimedia art of Murakami Takashi, and CLAMP’s manga and anime adaptations, to illuminate the profound connections between animators, characters, spectators, and technology. Working at the intersection of the philosophy of technology and the history of thought, Lamarre explores how anime and its related media entail material orientations and demonstrates concretely how the “animetic machine” encourages a specific approach to thinking about technology and opens new ways for understanding our place in the technologized world around us.

Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie. Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.
