Algorithmic Foundations of Robotics XII Ken Goldberg, Pieter Abbeel, Kostas Bekris, Lauren Miller, 2020-05-06 This book presents the outcomes of the 12th International Workshop on the Algorithmic Foundations of Robotics (WAFR 2016). WAFR is a prestigious, single-track, biennial international meeting devoted to recent advances in algorithmic problems in robotics. Robot algorithms are an important building block of robotic systems and are used to process inputs from users and sensors, perceive and build models of the environment, plan low-level motions and high-level tasks, control robotic actuators, and coordinate actions across multiple systems. However, developing and analyzing these algorithms raises complex challenges, both theoretical and practical. Advances in the algorithmic foundations of robotics have applications to manufacturing, medicine, distributed robotics, human-robot interaction, intelligent prosthetics, computer animation, computational biology, and many other areas. The 2016 edition of WAFR went back to its roots and was held in San Francisco, California – the city where the very first WAFR was held in 1994. Organized by Pieter Abbeel, Kostas Bekris, Ken Goldberg, and Lauren Miller, WAFR 2016 featured keynote talks by John Canny on “A Guided Tour of Computer Vision, Robotics, Algebra, and HCI,” Erik Demaine on “Replicators, Transformers, and Robot Swarms: Science Fiction through Geometric Algorithms,” Dan Halperin on “From Piano Movers to Piano Printers: Computing and Using Minkowski Sums,” and by Lydia Kavraki on “20 Years of Sampling Robot Motion.” Furthermore, it included an Open Problems Session organized by Ron Alterovitz, Florian Pokorny, and Jur van den Berg. There were 58 paper presentations during the three-day event. The organizers would like to thank the authors for their work and contributions, the reviewers for ensuring the high quality of the meeting, the WAFR Steering Committee led by Nancy Amato as well as WAFR’s fiscal sponsor, the International Federation of Robotics Research (IFRR), led by Oussama Khatib and Henrik Christensen. WAFR 2016 was an enjoyable and memorable event.

Robotics Models Using LEGO WeDo 2.0 Diego Galvez-Aranda, Mauricio Galvez Legua, 2021-07-27 Build 12 robotics models using LEGO WeDo 2.0. This book features models created especially to introduce LEGO enthusiasts to hardware and software concepts while creating robots inspired by natural wildlife. You'll learn the basics behind different mechanisms and principals required to build walking robots. Simultaneously, make your model "come to life" by incorporating powerful yet simple programming techniques. For every model, go through all the phases to explore each robot's functionality, solve problems using creativity, identify issues, and propose solutions. The authors's expertise working in education, mathematics, programming, electronic, and robotics came together to produce this book. The methodology used is designed to help you discover new knowledge, that has been used historically in science. It relies on observation, measurement, experimentation and formulation, analysis, and modification of hypotheses. All activities are carried out following the methodology created by the authors called 5 phases of educational robotics (5PER), which are: design, construction, programming, testing and, finally, documenting and sharing With Robotics Models Using LEGO WeDo 2.0 you'll create solutions to specific, tangible problems while building fun and engaging LEGO models and learning to program them to accomplish basic tasks. What You'll Learn Create your own LEGO WeDo 2.0 inventions using the design principles in this book Understand the mechanics behind animal motions by developing robotic prototypes and how they interact with our environment through the use of sensors and actuators Solve problems by using an iconographic programming language for the implementation of algorithms Who This Book Is For LEGO enthusiasts and students who want to prototype solutions to challenges using mechanical and computer science engineering. Teachers and parents of younger LEGO enthusiasts will also find the book a helpful guide to introducing the world of robotics in a dynamic and fun way.

Fundamentals of Robotics Prof Charria, 2013-10-11 Do you like robots? This book is intended as a reading book for children from 5 to 80 years old (ok, ok...from 5 to 8). Caution: This book requires that both, parents and children, work together at least 15 minutes a day on reading and assembling some robot pieces (only the printed version). Then main objective is to encourage parents and children to share quality time while learning by getting involved on two basic activities : Reading just one page and assembling just one of the robot's parts every day. The idea is that every parent and his(her) child spend some few minutes every day practicing reading, explaining the concepts for reading comprehension and learning about robotics. Every book has vocabulary for parents to help children to understand some difficult words from the world of Robots. Additionally, with very simple tools like glue and scissors, parents and children build the robot's parts, but again it's recommended to make just one robot part per day. This activity help to build children's imagination and creativity . It is a wonderful way to develop fine motor skills and something very important nowadays: patience. There are no instructions on how to fold the pieces. You don't have to worry because it's not that difficult and this exercise can help children to figure out geometric figures. Every reading session becomes a fun activity while kids see their own progress in several ways. The more they read the closer they get to have their paper-craft robot as a final reward. Automated printing has limitations and though the desire is to have the paper-craft robot on a sheet with good thickness, we had to use the same paper thickness of the interior pages. Sorry no much control on this issue.

Cartoon and TV Robots Prof Charria, 2013-12-15 Caution: This book requires that both, parents and children, work together at least 15 minutes a day on reading texts and assembling some robot pieces (only the printed version). Parents will remember all those TV and animated series where a robot was part of the cast. Children will learn about the robots and the importance of science. This is a reading book and also a historic compilation of robots appearing in Cartoon and TV Series. Do you like ROBOTS? Making Simple Robots Kathy Ceceri, 2022 Making Simple Robots is based on the idea that anybody can build a robot! That includes kids, educators, parents, and anyone who didn't make it to engineering school. If you can cut, fold, and tape a piece of paper to make a tube or a box, you can build a no-tech robotic part. In fact, many of the models in this book are based upon real-life prototypes -- working models created in research labs and companies. What's more, if you can use the apps on your smartphone, you can quickly learn to tell robots what to do using free, online, beginner-level software like MIT's Scratch and Microsoft MakeCode. The projects in this book which teach you about electric circuits by making jumping origami frogs with eyes that light up when you get them ready to hop. You'll practice designing all-terrain robot wheel-legs with free, online Tinkercad software, and you'll create files ready for 3D printing. You'll also learn to sew -- and code -- a cyborg rag doll with a blinking electronic eye. Each project includes step-by-step directions and clear illustrations and photographs. Along the way, you'll learn about the real research behind the DIY version, find shortcuts for making projects easier when needed, and get suggestions for adding to the challenge as your skill set grows.
