**Pulsed Neural Networks** Wolfgang Maass,Christopher M. Bishop,2001-01-26 Most practical applications of artificial neural networks are based on a computational model involving the propagation of continuous variables from one processing unit to the next. In recent years, data from neurobiological experiments have made it increasingly clear that biological neural networks, which communicate through pulses, use the timing of the pulses to transmit information and perform computation. This realization has stimulated significant research on pulsed neural networks, including theoretical analyses and model development, neurobiological modeling, and hardware implementation. This book presents the complete spectrum of current research in pulsed neural networks and includes the most important work from many of the key scientists in the field. Terrence J. Sejnowski's foreword, Neural Pulse Coding, presents an overview of the topic. The first half of the book consists of longer tutorial articles spanning neurobiology, theory, algorithms, and hardware. The second half contains a larger number of shorter research chapters that present more advanced concepts. The contributors use consistent notation and terminology throughout the book. Contributors Peter S. Burge, Stephen R. Deiss, Rodney J. Douglas, John G. Elias, Wulfram Gerstner, Alister Hamilton, David Horn, Axel Jahnke, Richard Kempter, Wolfgang Maass, Alessandro Mortara, Alan F. Murray, David P. M. Northmore, Irit Opher, Kostas A. Alfred Wegener Mott T. Greene,2015-10-30 The book should be of interest not only to earth scientists, students of polar travel and exploration, and historians but to all readers who are fascinated by the great minds of science.--Henry R. Handbook of Downstream Processing E. Goldberg,2012-12-06 The last two decades have seen a phenomenal growth of the field of genetic or biochemical engineering and have witnessed the development and ultimately marketing of a variety of products-typically through the manipulation and growth of different types of microorganisms, followed by the recovery and purification of the associated products. The engineers and biotechnologists who are involved in the full-scale process design of such facilities must be familiar with the variety of unit operations and equipment and the applicable regulatory requirements. This book describes current commercial practice and will be useful to those engineers working in this field in the design, construction and operation of pharmaceutical and biotechnology plants. It will be of help to the chemical or pharmaceutical engineer who is developing a plant design and who faces issues such as: Should the process be batch or continuous or a combination of batch and continuous? How should the optimum process design be developed? Should one employ a new revolutionary separation which could be potentially difficult to validate or use accepted technology which involves less risk? Should the process be run with ingredients formulated from water for injection, deionized water, or even filtered tap water? Should any of the separations be run in cold rooms or in glycol jacketed lines to minimize microbial growth where sterilization is not possible? Should the process equipment and lines be designed to be sterilized in-place, cleaned-in-place, or should every piece be broken down, cleaned and autoclaved after every turn?

*Severe Convective Storms* Charles Doswell,2015-03-30 This highly illustrated book is a collection of 13 review papers focusing on convective storms and the weather they produce. **Scientific Babel** Michael D. Gordin,2015-04-13 English is the language of science today. No

matter which languages you know, if you want your work seen, studied, and cited, you need to publish in English. But that hasn't always been the case. Though there was a time when Latin dominated the field, for centuries science has been a polyglot enterprise, conducted in a number of languages whose importance waxed and waned over time—until the rise of English in the twentieth century. So how did we get from there to here? How did French, German, Latin, Russian, and even Esperanto give way to English? And what can we reconstruct of the experience of doing science in the polyglot past? With *Scientific Babel*, Michael D. Gordin resurrects that lost world, in part through an ingenious mechanism: the pages of his highly readable narrative account teem with footnotes—not offering background information, but presenting quoted material in its original language. The result is stunning: as we read about the rise and fall of languages, driven by politics, war, economics, and institutions, we actually see it happen in the ever-changing web of multilingual examples. The history of science, and of English as its dominant language, comes to life, and brings with it a new understanding not only of the frictions generated by a scientific community that spoke in many often mutually unintelligible voices, but also of the possibilities of the polyglot, and the losses that the dominance of English entails. Few historians of science write as well as Gordin, and *Scientific Babel* reveals his incredible command of the literature, language, and intellectual essence of science past and present. No reader who takes this linguistic journey with him will be disappointed.

**Global Trends for the 21st Century** Adnan Khan, 2016-10-10 The Muslim ummah globally does not set trends and when it does it is usually not the right ones. Today the Muslims are divided into over 50 states and none engages in global politics and neither does any of them set the global agenda and thus affect global politics. If the ummah lived under the Khilafah assessing global trends would have practical ramifications as our assessment of the trends would lead to the Khilafah to take a position on global issues and act internationally based on this. But without the Khilafah, this exercise is not fruitless. We cannot start this exercise on the day the Khilafah is established, that would be very short sighted. But the plots and plans against the Ummah and Islam all take place in a global context, the ferocity and success of these plots will be affected by the emerging trends. Not comprehending global trends led to disaster in the past. This is why a report analysing the key global trends for remainder of the 21st century is a necessity for Muslims engaged in the work to bring about change. It is a necessity for the ummah as a whole in order to realise its position in the world

**The Rand at War, 1899-1902** Diana Rose Cammack, 1990-01-01 Diana Cammack provides a rich and readable account of events in the city of Johannesburg that led to the Anglo-Boer War, and she enhances our understanding of both the effects of British imperialism at the turn of the century and the development of the unique racial order of contemporary South Africa. Incorporating social, political, and military history, this work covers events on the Rand during the final year before the war including the flight of well over a hundred thousand black and white refugees in a few weeks of panic; refugee life at the coast; and work, politics, and life on the Rand and in the city between October 1899 and May 1902. Drawing on varied sources, the author provides new information for the specialist, including material on the infamous Uitlander grievances, the motives and machinations of the Rand agitators, their role in Rand reconstruction, and their relationship with the British high commissioner, Sir Alfred Milner. The wealth of detail enhances the readability of the book which recounts this interesting period of South African history.

**Hidden Agendas** Jane Kelsey,2013-05-01 ‘Forget the label “free trade agreement”. The TPPA, under negotiation between New Zealand, the USA and ten other countries, is a direct assault on our right to decide our own future.’ In this hard-hitting BWB Text, Professor Jane Kelsey picks apart the current negotiations surrounding the proposed Trans-Pacific Partnership Agreement (TPPA) and comes to some disturbing conclusions. Such a treaty, she says in this new work, has little credible economic rationale but could have potentially dangerous effects on our ability to decide for ourselves how we address the economic, environmental, social and Treaty challenges of the twenty-first century. At a time of constitutional review, the secrecy surrounding the TPPA negotiations raises hard questions about the future shape of New Zealand.

Brodsky & Utkin Lois Nesbitt,Alexander Brodsky,Ilya Utkin,2003-07 Alexander Brodsky and Ilya Utkin are the best known of a loosely organized group of Soviet artists known as Paper Architects, who designed much but built little in the early days of Glasnost, in the late 1980s. Many of their elaborate etchings, in which they depicted outlandish, often impossible, structures and cityscapes of allegorical content, were collected in our 1990 book Brodsky & Utkin. Now, with the addition of forty-three new and never-before-published prints, we are pleased to announce this updated edition. In their designs, by turns funny, cerebral, and deeply human, Brodsky & Utkin borrow from Egyptian tombs, Ledoux's visionary architecture, Le Corbusier's urban master plans, and other historical precedents, collaging these heterogeneous forms in learned and layered scrambles. Underlying the wit and visual inventiveness is an unmistakable moral: that the dehumanizing architecture of the sort seen in Russian cities in the 1980s and 1990s, and elsewhere around the globe, takes a sinister toll. A new preface assesses the works of Brodsky & Utkin and reminds us that the greatest art is often born of adversity. Beautifully printed in 300-screen dry-trap duotones by the Steinhauer Press, Brodsky & Utkin is a book for artists, architects, and collectors alike.

War and Revolution in Yugoslavia, 1941-1945 Jozo Tomasevich,2002-10 This is a meticulously researched history of the rule of the Axis powers in occupied Yugoslavia, along with the role of the other groups that collaborated with them—notably the extremist Croatian nationalist organization known as the Ustashes.
