Frank Lloyd Wright Paper Models ,2017-08-01 Frank Lloyd Wright Paper Models features step-by-step instructions and templates so you can create beautiful kirigami versions of Frank Lloyd Wright's iconic modernist architecture. Frank Lloyd Wright (1867-1959) is the most renowned and popular architect and designer in America. His buildings, including Fallingwater and New York's Guggenheim Museum, are iconic landmarks. Now you can create 14 of his best-loved buildings using the art of kirigami. Frank Lloyd Wright building kirigami templates included are: • Unity Temple • Frederick C. Robie House • Imperial Hotel • Aline Barnsdall Hollyhock House • Millard House (La Miniatura) • John Storer House • Freeman House • Charles Ennis House • National Life Insurance Building • Taliesin West • Herbert And Katherine Jacobs I House • Edgar J. Kaufmann House Fallingwater • Johnson Wax Administration Building • Solomon R. Guggenheim Museum Perfect for those that enjoy origami, each project features a short history of each house, step-by-step instructions and a template that you remove from the book. You follow the lines on the template, cutting and folding to make your own model. All you need is a scalpel, a cutting mat and a ruler. Clear cutting tips help you with the tricky stages, while photos of the finished model show you the final design. To make things easier, the most intricate parts of the templates have been pre-cut. Simply display your finished model and admire your handiwork. Frank Lloyd Wright Paper Models is a must for Wright fans and architectural model enthusiasts. Kirigami is the elegant Japanese art of folding and cutting paper to create intricate models. It's also the perfect medium for recreating the harmonious architecture of Frank Lloyd Wright. Pop-Up Design and Paper Mechanics Duncan Birmingham, 2019-02-21 This comprehensive guide to pop-up design and paper mechanics is a delightful introduction to the intriguing aspects of a fascinating craft. This new and accessible approach to pop-up theory and practice distills the numerous mechanisms into a logical set of 18 underlying shapes and explains the techniques for building these shapes. The author demonstrates how sophisticated pop-up designs are constructed and shows how to form a three-dimensional reference book. Invaluable for both professional and amateur designers. Appeals to craft-hobby enthusiasts who make their own greeting cards, but is also a useful aid to teachers of art, design and technology, designers, illustrators and sculptors.

Ish Peter H. Reynolds,2013-09-10 Features an audio read-along! A creative spirit learns that thinking "ish-ly" is far more wonderful than "getting it right" in this gentle new fable from the creator of the award-winning picture book The Dot. Ramon loved to draw. Anytime. Anything. Anywhere. Drawing is what Ramon does. It¹s what makes him happy. But in one split second, all that changes. A single reckless remark by Ramon's older brother, Leon, turns Ramon's carefree sketches into joyless struggles. Luckily for Ramon, though, his little sister, Marisol, sees the world differently. She opens his eyes to something a lot more valuable than getting things just right. Combining the spareness of fable with the potency of parable, Peter Reynolds shines a bright beam of light on the need to kindle and tend our creative flames with care.

Intelligent Mobile Projects with TensorFlow Jeff Tang, 2018-05-22 Create Deep Learning and Reinforcement Learning apps for multiple platforms with TensorFlow Key Features Build TensorFlow-powered AI applications for mobile and embedded devices Learn modern AI topics such as computer vision, NLP, and deep reinforcement learning Get practical insights and exclusive working code not available in the TensorFlow documentation Book Description As a developer, you always need to keep an eye out and be ready for what will be trending soon, while also focusing on what's trending currently. So, what's better than learning about the integration of the best of both worlds, the present and the future? Artificial Intelligence (AI) is widely regarded as the next big thing after mobile, and Google's TensorFlow is the leading open source machine learning framework, the hottest branch of AI. This book covers more than 10 complete iOS, Android, and Raspberry Pi apps powered by TensorFlow and built from scratch, running all kinds of cool TensorFlow models offline on-device: from computer vision, speech and language processing to generative adversarial networks and AlphaZero-like deep reinforcement learning. You'll learn how to use or retrain existing TensorFlow models, build your own models, and develop intelligent mobile apps running those TensorFlow models. You'll learn how to quickly build such apps with step-by-step tutorials and how to avoid many pitfalls in the process with lots of hard-earned troubleshooting tips. What you will learn Classify images with transfer learning Detect objects and their locations Transform pictures with amazing art styles Understand simple speech commands Describe images in natural language Recognize drawing with Convolutional Neural Network and Long Short-Term Memory Predict stock price with Recurrent Neural Network in TensorFlow and Keras Generate and enhance images with generative adversarial networks Build AlphaZero-like mobile game app in TensorFlow and Keras Use TensorFlow Lite and Core ML o

Model Making for the Stage Keith Orton,2004 Model Making for the Stage explains the practical techniques that will promote accurate scale model making for the theatre. Topics covered include: practical information about model-making materials and setting up a good working environment; foundation skills, techniques and exercises to introduce model making; how to construct scale interiors, exteriors and furniture, and create accurate scale figures; different types of model within a design process; the scenographic model as a communication tool; collaborating with the director and fellow designers as an integral part of model-making process; the importance of considering the performers during the model-making process; information about theatre technology, scenic construction and painting; and presenting the final scenographic model--Publisher's description.

Paper Sculpture Richard Sweeney, 2021-11-28 Paper is readily available and inexpensive in comparison to other sculptural media, and can be manipulated with a set of simple tools. It is a tactile medium, which can be formed into three-dimensional shapes quickly and immediately through folding and cutting. This hands-on element is something I feel is important -- it allows the artist to engage immediately with the material, resulting in something physical and tangible. It is, perhaps, these factors that make it so appealing, not only as a tool to apply in different fields, such as model making for architecture, but as an activity for its own sake. A section of this book is dedicated to a selection of the techniques I use in the creation of my work, and which I demonstrate in my workshops. My aim is to show the basic principles of form-making in paper, which can then be expanded on and explored as the reader wishes. Also included are my sources of inspiration and details of my working practice, which shows the evolution of an initial idea into a final artwork. I hope this book offers an insight into my work, while offering inspiration to those who wish to explore the creative potential of paper.

The 55 revised full papers presented were carefully reviewed and selected from a total of 163 submissions. The papers are organized in topical sections on artificial intelligence in transportation and urban mobility (AITUM), artificial life and evolutionary algorithms (ALEA), computational methods in bioinformatics and systems biology (CMBSB), computational logic with applications (COLA), emotional and affective computing (EAC), general artificial intelligence (GAI), intelligent robotics (IROBOT), knowledge discovery and business intelligence (KDBI), muli-agent systems (MASTA) social simulation and modelling (SSM), text mining and application (TEMA) as well as web and network intelligence (WNI).

Information Technology, Systems Research, and Computational Physics Piotr Kulczycki, Janusz Kacprzyk, László T. Kóczy, Radko Mesiar, Rafal Wisniewski, 2019-04-17 This book highlights a broad range of modern information technology tools, techniques, investigations and open challenges, mainly with applications in systems research and computational physics. Divided into three major sections, it begins by presenting specialized calculation methods in the framework of data analysis and intelligent computing. In turn, the second section focuses on application aspects, mainly for systems research, while the final section investigates how various tasks in the basic disciplines—mathematics and physics—can be tackled with the aid of contemporary IT methods. The book gathers selected presentations from the 3rd Conference on Information Technology, Systems Research and Computational Physics (ITSRCP'18), which took place on 2–5 July 2018 in Krakow, Poland. The intended readership includes interdisciplinary scientists and practitioners pursuing research at the interfaces of information technology, systems research, and computational physics.
