✎ DISTRIBUTED PROPULSION TECHNOLOGY Amir S. Gohardani,2014 Distributed propulsion technology is one of the revolutionary candidates for future aircraft propulsion. In this book, which serves as the very first reference book on distributed propulsion technology, the potential role of distributed propulsion technology in future aviation is investigated. Following a historical journey that revisits distributed propulsion technology in unmanned air vehicles, commercial aircrafts, and military aircrafts, features of this specific technology are highlighted in synergy with an electric aircraft concept and a first-of-its-kind comparison between commercial and military aircrafts employing distributed propulsion arrangements. In light of propulsion/airframe integration and complementary technologies, such as boundary layer ingestion, thrust vectoring and circulation control, transpired opportunities and challenges are addressed in addition to a number of identified research directions proposed for future aircrafts. Moreover, a diverse set of distributed propulsion arrangements are considered. These include: small engines, gas-driven multi-fan architectures, turboelectric systems featuring superconductive and non-superconducting electrical machine technology, and electromagnetic fans. This book features contributions by the National Aeronautics and Space Administration (NASA) and the United States Air Force (USAF), and includes the first proposed official definition for distributed propulsion technology in subsonic fixed wing aircrafts.

✎ HAPPY JACK’S Go-BUGGY Jack Ilfrey,Max Reynolds,1979 This autobiography was originally written in 1946 by eight-victory WWII fighter ace, Jack Ilfrey. This new edition has been expanded with many new photographs (many never before published), a special color photo section, and three detailed aircraft profile paintings.

✎ CRUISING ATTITUDE Heather Poole,2012-03-06 Real-life flight attendant Heather Poole has written a charming and funny insider’s account of life and work in the not-always-friendly skies. Cruising Attitude is a coffee, tea, or me? for the 21st century, as the author parlays her fifteen years of flight experience into a delightful account of crazy airline passengers and crew drama, of overcrowded crashpads in “Crew Gardens” Queens and finding love at 35,000 feet. The popular author of “Galley Gossip,” a weekly column for AOL’s award-winning travel website Gadling.com, Poole not only shares great stories, but also explains the ins and outs of flying, as seen from the flight attendant’s jump seat.

✎ INTERACTIVE AEROSPACE ENGINEERING AND DESIGN Dava J. Newman,2002 This text contains an integrated bound-in CD-ROM, and has a strong emphasis on design. Its active visual approach and inclusion of space-orientated engineering make it an interesting examination of the aerospace engineering field.

✎ FLYING HIGH IN A COMPETITIVE INDUSTRY Loizos Th Heracleous,Jochen Wirtz,Nitin Pangarkar,2009 Singapore Airlines (SIA) is widely acknowledged as one of the world’s leading airlines, if not the best airline, globally. This book provides insights into a simple but intriguing question: How has SIA managed to outperform other flag-carriers for decades in an industry where it is notoriously difficult to succeed consistently? This updated second edition of Flying High in a Competitive Industry begins with an analysis of the airline industry and its key trends, moving on to a broad outline of SIA’s strategic drivers of success. Empirical research was conducted at SIA to gain a deeper understanding of its strategy, core competencies and internal organisation, innovation processes and human resource practices, in order to instill strategy lessons that can inform the strategies of any organisation competing in intensely competitive industries. This book ends with some strategic lessons that apply to any organisation that aims to achieve sustainable success in hypercompetitive markets.

✎ MR SIA Ken Hickson,2014-10-28 Introducing the life and times of a legend in international aviation — Lim Chin Beng — the man they called Mr SIA. Absorbing the life and work of Lim Chin Beng is like watching a fly past of airlines and aircraft old and new. In this book, his past comes to meet you in many forms — designs, shapes, figures, photographs, episodes, places, people and you discover the connections with business, society and international aviation today and into the future. Here’s a man who was instrumental in taking the very basic components of a business — like a potter taking the clay — and creating what has become one of the world’s leading brands, Singapore Airlines. But this airline specialist, trained as an economist, had more jobs to do. His broad range of interests — arts and sports, property and tourism — led to him being called on to do his national service for Singapore. He was Ambassador to Japan for two terms and trade negotiator, chairman of the Singapore Tourism Board, Changi Airport International, Singapore Airshow, Singapore Press Holdings, Ascott Group, and ST Aerospace. Described as a quiet achiever and a visionary, this modest gentleman was not afraid to make bold decisions and take risks, even to the extent of setting up a budget airline, Valuair. Here was one man, who in his time, played many parts, on the world’s stage and at home. ✎ LESSONS FROM THE TITANS: WHAT COMPANIES IN THE NEW ECONOMY CAN LEARN FROM THE GREAT INDUSTRIAL GIANTS TO DRIVE SUSTAINABLE SUCCESS Scott Davis,Carter Copeland,Rob Wertheimer,2020-07-14 Three top Wall Street analysts reveal enduring lessons in sustainable success from the great industrial titans—the high-tech companies of their day—to the disruptors that now dominate the economy. Before Silicon Valley disrupted the world with new technologies and business models, America’s industrial giants paved the way. Companies like General Electric, United Technologies, and Caterpillar were the Google and Amazon of their day, setting gold standards in innovation, growth, and profitability. Today’s leaders can learn a great deal from their successes, as well as their missteps. In this essential guide, three veteran Wall Street analysts reveal timeless lessons from the titans of industry—and offer battle-tested survival tactics for an ever-changing world. You’ll learn: how GE became the largest company on earth—only for a culture of arrogance to set in motion the largest collapse in history how Boeing reassessed risks, raised profits—and tragically lost its balance how DanaHER avoided the pitfalls of tremendous success—by continually reinventing itself how Honeywell experienced a near-fatal cultural breakdown—and executed a flawless turnaround how Caterpillar relied too much on forecasting, lost billions—and rallied by recommitting to the basics Filled with illuminating case studies and brilliant in-depth analysis, this invaluable book provides a multitude of insights that will help you weather market upheavals, adapt to disruptions, and optimize your resources to your best advantage. You’ll learn hard-won lessons in innovation, growth, resilience, and operational excellence, as well as the time-proven fundamentals of continuous improvement for lasting success. In the end, you’ll have your own personal toolbox of useful takeaways from more than a century’s worth of data, experience, wisdom, and can-do spirit, courtesy of some of the greatest business enterprises of all time. This is how manufacturers survived the first disruptors of technology—and how today’s giants can survive and thrive during continuous cycles of disruption.

✎ Up In The Air Greg J. Bamber,Jody Hoffer Gittell,Thomas A. Kochan,Andrew von Nordenflycht,2013-05-15 When both an industry’s workers and its customers report high and rising frustration with the way they are being treated, something is fundamentally wrong. In response to these conditions, many of the world’s airlines have made ever-deeper cuts in services and their workforces. Is it too much to expect airlines, or any other enterprise, to provide a fair return to investors, high-quality reliable service to their customers, and good jobs for their employees? Measured against these three expectations, the airline industry is failing. In the first five years of the twenty-first century alone, U.S. airlines lost a total of \$30 billion while shedding 100,000 jobs, forcing the remaining workers to give up over \$15 billion in wages and benefits. Combined with plummeting employee morale, shortages of air traffic controllers, and increased congestion and flight delays, a total collapse of the industry may be coming. Is this state of affairs inevitable? Or is it possible to design a more sustainable, less volatile industry that better balances the objectives of customers, investors, employees, and the wider society? Does deregulation imply total abrogation of government’s responsibility to oversee an industry showing the clear signs of deterioration and increasing risk of a pending crisis? Greg J. Bamber, Jody Hoffer Gittell, Thomas A. Kochan, and Andrew von Nordenflycht explore such questions in a well-informed and engaging way, using a mix of quantitative evidence and qualitative studies of airlines from North America, Asia, Australia, and Europe. Up in the Air provides clear and realistic strategies for achieving a better, more equitable balance among the interests of customers, employees, and shareholders. Specifically, the authors recommend that firms learn from the innovations of companies like Southwest and Continental Airlines in order to build a positive workplace culture that fosters coordination and commitment to high-quality service, labor relations policies that avoid long drawn-out conflicts in negotiating new agreements, and business strategies that can sustain investor, employee, and customer support through the ups and downs of business cycles.

✎ Black Fokker Leader Peter Kilduff,2009-05-19 This biography of the WWI fighter pilot offers “an intimate portrait of the last recipient of the ‘Blue Max’”

(Barrett Tillman). One of the most noteworthy German fighter pilots of World War I was Leutnant der Reserve Carl Degelow, whose squadron of mostly black Fokker D.VII fighters posed a formidable threat to some of Britain’s most celebrated air units on the Western Front. Black Fokker Leader, filled with new information and original photos, is based on the author’s research of significant German archival material and documentation, as well as British, French, and Belgian sources, shedding new light on this legendary ace. The biography offers previously unpublished material about Degelow and his comrades: how he was almost court-martialed; how his career was saved by Josef Jacobs; how Degelow helped Willy Rosenstein escape from Nazi Germany; and much more. Also included are new insights into men like Field Marshal Erhard Milch, Degelow’s wing commander in WWI; and V-2 rocket chief Gen. Hans Jeschonnek, a Degelow protégé in 1918.

RYANAIR Siobhán Creaton, 2005 Just a few years ago, Ryanair was a tiny, impoverished airline competing unsuccessfully with Aer Lingus. In 2003, the company was worth more than British Airways. This is the updated story of its meteoric rise, told by both the people who have served the company and also through the eyes of major rivals.

AVIATION AND TOURISM Anne Graham, Andreas Papatheodorou, Peter Forsyth, 2016-04-08 Transport is an essential element of tourism, providing the vital link between the tourist generating areas and destinations. Good accessibility, which is determined by the transport services provided, is a fundamental condition for the development of any tourist destination. Moreover the transport industry can be a major beneficiary of tourism because of the additional passenger demand that may be generated. Aviation is an increasingly important mode of transport for tourism markets. Whilst geography has meant that, in modern times, air travel has always been the dominant mode for long distance travel and much international tourism, moves towards deregulation, and in particular the emergence of the low cost carrier sector, have also increased aviation’s significance for short and medium haul tourism trips. Thus developments in aviation can have very major implications for many leisure and business tourism markets. However the characteristics and needs of leisure travellers are generally so very different from business travellers that this necessitates a separate consideration of these markets if a detailed understanding of the relationship with aviation is to be gained. In spite of the obvious closeness between the aviation and tourism industries, there are very few specialist texts on this subject. Most tourism focused books consider aviation as just one component of the tourism industry which needs to be discussed, whereas aviation specialist texts rarely concentrate on just leisure travel. In addition there is very little literature that gives a detailed appreciation of the complexities and potential conflicts associated with the development of coherent and effective aviation and tourism policies. Therefore it is the aim of this book to fill this important gap which exists with a comprehensive, in-depth study of the relationship between aviation and leisure travel. The book deals exclusively with issues related to the relationship between aviation and leisure travel. It does this with an analysis of the theoretical concepts relevant to the subject area combined with a detailed investigation of current practice within the aviation and tourism industries. Each chapter is illustrated with case study material that will reinforce the understanding of the issues that are being examined.

VIPER PILOT (Enhanced Edition) Dan Hampton, 2012-10-02 Get inside the cockpit with Dan Hampton, the military’s most decorated F-16 pilot, in this enhanced e-book edition of Viper Pilot. Exclusive to this edition are 11 video interviews, where Hampton talks candidly about his time as a Wild Weasel and about the fighter jet that kept him alive through so many dangerous skirmishes. In addition, an interactive “first-person” cockpit diagram lets you get deeper into the action, providing a visual companion to the book that leaves you feeling like you’re sitting in the iconic F-16 itself. 151 combat missions 21 hard kills on surface-to-air-missile sites 4 Distinguished Flying Crosses with Valor 1 Purple Heart Sure to rank as one of the greatest aviation memoirs ever written, Viper Pilot is an Air Force legend’s thrilling eyewitness account of modern air warfare. From 1986 to 2006, Lt. Col. Dan Hampton was a leading member of the Wild Weasels, the elite Air Force fighter squadrons whose mission is recognized as the most dangerous job in modern air combat. Weasels are the first planes sent into a war zone, flying deep behind enemy lines purposely seeking to draw fire from surface-to-air missiles and artillery. They must skillfully evade being shot down—and then return to destroy the threats, thereby making the skies safe for everyone else to follow. Today these vital missions are more hazardous than direct air-to-air engagement with enemy aircraft. Hampton’s record number of strikes on high-value targets make him the most lethal F-16 Wild Weasel pilot in American history. This is his remarkable story. Taught to fly at an early age by his father, Hampton logged twenty years and 608 combat hours in the world’s most iconic fighter jet: the F-16 Fighting Falcon, or Viper as its pilots call it. Hampton spearheaded the 2003 invasion of Iraq, leading the first flight of fighters over the border en route to strike Baghdad. In the war that followed, he engaged in a series of brilliantly executed missions that earned him three Distinguished Flying Crosses with Valor; he notably saved a U.S. Marine unit from certain death by taking out the surrounding enemy forces near Nasiriyah. Two years earlier, on 9/11, Hampton’s father was inside the Pentagon when it was attacked; with his dad’s fate unknown, Hampton was scrambled into American skies and given the unprecedented orders to shoot down any unidentified aircraft. Hampton also flew critical missions in the first Gulf War, served on the Air Combat Command staff during the Kosovo War, and was injured in the 1996 Khobar Towers terrorist attack. With manned missions rapidly giving way to remote-controlled UAV drones, Viper Pilot may be the last memoir by a true hero of the skies. Gripping and irreverently humorous, it is an unforgettable look into the closed world of fighter pilots and modern air combat. Please note that due to the large file size of these special features this enhanced e-book may take longer to download than a standard e-book.
