Land Cover Classification of Remotely Sensed Images S. Jenicka, 2021-03-10
The book introduces two domains namely Remote Sensing and Digital Image Processing. It discusses remote sensing, texture, classifiers, and procedures for performing the texture-based segmentation and land cover classification. The first chapter discusses the important terminologies in remote sensing, basics of land cover classification, types of remotely sensed images and their characteristics. The second chapter introduces the texture and a detailed literature survey citing papers related to texture analysis and image processing. The third chapter describes basic texture models for gray level images and multivariate texture models for color or remotely sensed images with relevant Matlab source codes. The fourth chapter focuses on texture-based classification and texture-based segmentation. The Matlab source codes for performing supervised texture based segmentation using basic texture models and minimum distance classifier are listed. The fifth chapter describes supervised and unsupervised classifiers. The experimental results obtained using a basic texture model (Uniform Local Binary Pattern) with the classifiers described earlier are discussed through the relevant Matlab source codes. The sixth chapter describes land cover classification procedure using multivariate (statistical and spectral) texture models and minimum distance classifier with Matlab source codes. A few performance metrics are also explained. The seventh chapter explains how texture based segmentation and land cover classification are performed using the hidden Markov model with relevant Matlab source codes. The eighth chapter gives an overview of spatial data analysis and other existing land cover classification methods. The ninth chapter addresses the research issues and challenges associated with land cover classification using textural approaches. This book is useful for undergraduates in Computer Science and Civil Engineering and postgraduates who plan to do research or project work in digital image processing. The book can serve as a guide to those who narrow down their research to processing remotely sensed images. It addresses a wide range of texture models and classifiers. The book not only guides but aids the reader in implementing the concepts through the Matlab source codes listed. In short, the book will be a valuable resource for growing academicians to gain expertise in their area of specialization and students who aim at gaining in-depth knowledge through practical implementations. The exercises given under texture based segmentation (excluding land cover classification exercises) can serve as lab exercises for the undergraduate students who learn texture based image processing.

Explanation in Causal Inference Tyler J. VanderWeele, Tyler VanderWeele, 2015
The book begins with a comprehensive introduction to mediation analysis, including chapters on concepts for mediation, regression-based methods, sensitivity analysis, time-to-event outcomes, methods for multiple mediators, methods for time-varying mediation and longitudinal data, and relations between mediation and other concepts involving intermediates such as surrogates, principal stratification, instrumental variables, and Mendelian randomization. The second part of the book concerns interaction or moderation, including concepts for interaction, statistical interaction, confounding and interaction, mechanistic interaction, bias analysis for interaction, interaction in genetic studies, and power and sample-size calculation for interaction. The final part of the book provides comprehensive discussion about the relationships between mediation and

interaction and unites these concepts within a single framework.

Indefinite Inner Product Spaces, Schur Analysis, and Differential Equations Daniel Alpay, Bernd Kirstein, 2018-01-30 This volume, which is dedicated to Heinz Langer, includes biographical material and carefully selected papers. Heinz Langer has made fundamental contributions to operator theory. In particular, he has studied the domains of operator pencils and nonlinear eigenvalue problems, the theory of indefinite inner product spaces, operator theory in Pontryagin and Krein spaces, and applications to mathematical physics. His works include studies on and applications of Schur analysis in the indefinite setting, where the factorization theorems put forward by Krein and Langer for generalized Schur functions, and by Dijksma-Langer-Luger-Shondin, play a key role. The contributions in this volume reflect Heinz Langer's chief research interests and will appeal to a broad readership whose work involves operator theory.

African Islands Peter Mitchell, 2022-04-11 *African Islands* provides the first geographically and chronologically comprehensive overview of the archaeology of African islands. This book draws archaeologically informed histories of African islands into a single synthesis, focused on multiple issues of common interest, among them human impacts on previously uninhabited ecologies, the role of islands in the growth of long-distance maritime trade networks, and the functioning of plantation economies based on the exploitation of unfree labour. Addressing and repairing the longstanding neglect of Africa in general studies of island colonization, settlement, and connectivity, it makes a distinctively African contribution to studies of island archaeology. The availability of this much-needed synthesis also opens up a better understanding of the significance of African islands in the continent's past as a whole. After contextualizing chapters on island archaeology as a field and an introduction to the variety of Africa's islands and the archaeological research undertaken on them, the book focuses on four themes: arriving, altering, being, and colonizing and resisting. An interdisciplinary approach is taken to these themes, drawing on a broad range of evidence that goes beyond material remains to include genetics, comparative studies of the languages, textual evidence and oral histories, island ecologies, and more. *African Islands* provides an up-to-date synthesis and account of all aspects of archaeological research on Africa's islands for students and academics alike.
