State-of-the-Art Technologies in Food Science Murlidhar Meghwal, Megh R. Goyal, 2018-08-14 There has been a growing interest in the health benefits derived from fruits and vegetables and the food products based on them. Many foods contain various phytochemicals, flavonoids, fibers, macronutrients and micronutrients, minerals, etc. that are good for health and essential for keeping good health. This volume provides a global perspective of the current state of food and health research, innovation, and emerging trends. It focuses on topics of food for better health, including functional foods and nutraceutical foods. The book is divided into several sections, covering: • Foods for Human Health Promotion and Prevention of Diseases, which include fruits, vegetables, and grains: their peels and fiber for better human health, health prospects of bioactive peptides derived from seed storage proteins, mushrooms as a novel source of antihyperlipidemic agents, and emerging foodborne illnesses and their prevention. • Specific Fruits, Spices and Dairy-Based Functional Foods for Human Health, which looks at the functional medicinal values of fenugreek, fruits as functional foods, and functional fermented dairy products. • Issues, Challenges, and Specialty Topics in Food Science, which focuses mainly on the stability issues of whole wheat flour, physicochemical properties and quality of food lipids, methods for food analysis and quality control, and interventions of ohmic heating technology in foods. The volume will be of interest to health practitioners, food specialists, nutrition producers and suppliers, practicing food process engineers, food technologists, researchers, food industry professionals, and faculty and upper-level students in food science.

Executing Windows Command Line Investigations Chet Hosmer, Joshua Bartolomie, Rosanne Pelli, 2016-06-11 The book *Executing Windows Command Line Investigations* targets the needs of cyber security practitioners who focus on digital forensics and incident response. These are the individuals who are ultimately responsible for executing critical tasks such as incident response; forensic analysis and triage; damage assessments; espionage or other criminal investigations; malware analysis; and responding to human resource violations. The authors lead readers through the importance of Windows CLI, as well as optimal configuration and usage. Readers will then learn the importance of maintaining evidentiary integrity, evidence volatility, and gain appropriate insight into methodologies that limit the potential of inadvertently destroying or otherwise altering evidence. Next, readers will be given an overview on how to use the proprietary software that accompanies the book as a download from the companion website. This software, called Proactive Incident Response Command Shell (PIRCS), developed by Harris Corporation provides an interface similar to that of a Windows CLI that automates evidentiary chain of custody and reduces human error and documentation gaps during incident response. Includes a free download of the Proactive Incident Response Command Shell (PIRCS) software. Learn about the technical details of Windows CLI so you can directly manage every aspect of incident response evidence acquisition and triage, while maintaining evidentiary integrity.

Getting started with Electron.js Andrés Cruz, Electron.js is a web framework with which we can create cross-platform (non-native) desktop applications that work on Windows, MacOS and Linux, with a web wrapper using JavaScript, HTML and CSS and without the need for native development experience. This book is for anyone who wants to start developing with Electron.js; No prior knowledge of other JavaScript frameworks is required, although you should know basic Node.js development, as well as HTML, CSS, and JavaScript. For those who want to learn about the framework and create their first

desktop applications. For those people who want to learn something new, learn about a framework that doesn't have much documentation. For people who want to improve a skill, want to grow as a developer, and want to continue to climb their path in web development. For those who want to learn or improve a skill and with this, increase their chances of employment or to carry out a personal project. This book has a total of 7 chapters and consists of explanations and practices: We will give the first contact with Electron, creating a minimal application with which we will know the flow and basic structure of the framework and with this, know its possibilities. We are going to know the key modules that Electron.js provides us in a more theoretical than practical way, therefore, when using them later, you will already have a reference to them. We are going to create the bases of a chat type application, which, although it will not have real functionality, will allow us to experiment with some modules provided in the Electron API. We are going to generate an application for production and with this, generate its executables. We are going to create a basic text editor type application and with this, learn about the first integrations with Electron.js; the application will have options to customize the text in formats and save and open files. We are going to create a To Do application or tasks, for it we will use Vue.js, Express.js, Axios and MySQL as main technologies in its development. We are going to work in a better way with the development mode in the application, we will know how to configure the environment variables and packages to make the main process reload every time changes are started in said process. The book is currently in development...

Targeted Individuals, Mind Control, Directed Energy Weapons Phiem

Nguyen,2015-08-29 Mystery crime was solved at the end of one human life. This is the result I got while searching my mind, then God, and the entire environment this world was set in. Step by step, day by day, year by year, for my whole life was seeking the light to bring this innocent soul immersed in the truth and to define the limit of imagining and exploit. Modern science should parallel what's moral, and human dignity should be respected. Painful targeted individuals-I advocate to end this atrocious crime and ask those who are responsible for the life of victims to do their part-governments or corporations or etc.
