Toys from Trash Arvind Gupta,2001 Get the junk out of the trunk and fashion it into cool toys that promise endless hours of fun. Create over 50 toys- a cool stick figure from ice cream sticks, a snazzy goody bag from an old plastic bottle, a simple spoon propeller from plastic spoons and even a complicated water turbine from a water bottle and drinking straws. All out of readily available material. The step-by-step instructions and simple and clear illustrations make this a handy book to have at home to tide over long vacations.

Never Alone, Except for Now Kris Cohen,2017-10-19 How is it that one can be connected to a vast worldwide network of other people and places via digital technologies and yet also be completely alone? Kris Cohen tackles this philosophical question in *Never Alone, Except for Now* by exploring how contemporary technologies are changing group formations and affiliations within social life. He identifies a new form of collectivity that exists between publics, which are built through conscious acts, and populations, which are automatically constructed through the collection of Big Data. Finding traditional liberal concepts of the public sphere and neoliberal ideas of populations inadequate on their own to examine these new forms of sociality, Cohen places familiar features of the web—such as emoticons, trolling, and search engines—in conversation with artworks by Felix Gonzalez-Torres, William Gibson, Sharon Hayes, and Thomson & Craighead to more precisely articulate the affective and aesthetic experiences of living between publics and populations. This liminal experience—caught between existing as a set of data points and as individuals newly empowered to create their own online communities—explains, Cohen contends, how one is simultaneously alone and connected in ways never before possible.

Too Fast to Think Chris Lewis,2016-10-03 Our lives are getting faster and faster. We are engulfed in constant distraction from email, social media and our 'always on' work culture. We are too busy, too overloaded with information and too focused on analytical left-brain thinking processes to be creative. *Too Fast to Think* exposes how our current work practices, media culture and education systems are detrimental to innovation. The speed and noise of modern life is undermining the clarity and quiet that is essential to power individual thought. Our best ideas are often generated when we are free to think diffusely, in an uninterrupted environment, which is why moments of inspiration so often occur in places completely separate to our offices. To reclaim creativity, *Too Fast to Think* teaches you how to retrain your brain into allowing creative ideas to emerge, before they are shut down by interruption, distraction or the self-doubt of your over-rational brain. This is essential reading for anyone who wants to maximize their creative potential, as well as that of their team. Supported by cutting-edge research from the University of the Arts London and insightful interviews with business leaders, academics, artists, politicians and psychologists, Chris Lewis takes a holistic approach to explain the 8 crucial traits that are inherently linked to creation and innovation.

Women in Microbiology Rachel J. Whitaker,Hazel B. Barton,2020-07-02 Many girls want to become scientists when they grow up, just like many boys do. But for these girls, the struggle to do what they love and to be treated with respect has been much harder because of the discrimination and bias in our society. In *Women in Microbiology*, we meet women who, despite these obstacles and against tough odds, have become scientific leaders and revered mentors. The women profiled in this collection range from historic figures like Alice Catherine Evans and Ruth Ella Moore to modern heroes like Michele Swanson and Katrina Forest. What binds all of these remarkable women are a passion for their work, a zest for life, a warm devotion to mentoring others—especially younger women—and a sense of justice and fairness that they are willing to fight tirelessly to obtain. Each story is unique, but each woman featured in *Women in Microbiology* has done so much to expand our knowledge of the natural world while also making it easier for the next generation of scientists to work collaboratively and in an atmosphere where people are judged by their intellect, imagination, skill, and commitment to service regardless of gender or race. *Women in Microbiology* is a wonderful collection of stories that will inspire everyone, but especially young women and men who are wondering how to find their way in the working world. Some of the names are familiar and some are lesser known, but all of the stories arouse a sense of excitement, driven by tales of new, important scientific insights, stories of overcoming adversity and breaking boundaries, and the inclusion of personal tips and advice from successful careers. These stories are proof that a person can live a balanced and passionate life in science that is rich and rewarding.

Guardians of the Trees Kinari Webb, M.D.,2021-09-28 EMPOWERING...KINARI WEBB IS AN INSPIRATION. --BILL MCKIBBEN A WONDERFUL BOOK. --JANE GOODALL A TIMELY, HOPEFUL MEMOIR ABOUT A WOMAN SPEARHEADING A GLOBAL INITIATIVE TO HEAL THE WORLD'S RAINFORESTS AND THE COMMUNITIES WHO DEPEND ON THEM Full of hope and optimism, Kinari Webb takes us on an exhilarating, galvanizing journey across the world, sharing her passion for the natural world and for humanity. In our current moment of crisis, *Guardians of the Trees* is an essential roadmap for moving forward and the inspiring story of one woman's quest to heal the world. When Webb first traveled to Indonesian Borneo at 21 to study orangutans, she was both awestruck by the beauty of her surroundings and heartbroken by the rainforest

destruction she witnessed. As she got to know the local communities, she realized that their need to pay for expensive healthcare led directly to the rampant logging, which in turn imperiled their health and safety even further. Webb realized her true calling was at the intersection of medicine and conservation. After graduating with honors from the Yale School of Medicine, Webb returned to Borneo, listening to local communities about their solutions for how to both protect the rainforests and improve their lives. Founding two non-profits, Health in Harmony in the U.S. and ASRI in Indonesia, Webb and her local and international teams partnered with rainforest communities, building a clinic, developing regenerative economies, providing educational opportunities, and dramatically transforming the region. But just when everything was going right, Webb was stung by a deadly box jellyfish and would spend the next four years fighting for her life, a fight that would lead her to rethink everything. Was she ready to expand her work to a global scale and take climate change head on?

The Night Swimmers Peter Rock, 2019 A man just graduated from college and a young widow, Mrs. Abel, swim together at night, making their way across miles of open lake. The meaning behind these night swims and the narrator's relationship to Mrs. Abel become increasingly clouded as the summer passes, until the night Mrs. Abel disappears. Twenty years later, the man brings his wife and two daughters back to the peninsula, attempting to understand his past. As he rebuilds a world he's lost with decades' old relics, he searches for clues to the fate of Mrs. Abel and begins to swim long distances in dark water once again.

The Battle for Fortune Charlene Makley, 2018-05-15 Based on long-term fieldwork in a rural Tibetan region in China's northwest (2002-13), 'The Battle for Fortune' is an ethnography of state-local relations among Tibetans marginalized under China's Great Develop the West campaign and during the 2008 military crackdown on Tibetan unrest. The study brings anthropological approaches to states and development into dialogue with recent interdisciplinary debates about the very nature of human subjectivity and relations with nonhuman others (including deities).

Exposed Science Sara Shostak, 2013-02-15 We rely on environmental health scientists to document the presence of chemicals where we live, work, and play and to provide an empirical basis for public policy. In the last decades of the 20th century, environmental health scientists began to shift their focus deep within the human body, and to the molecular level, in order to investigate gene-environment interactions. In *Exposed Science*, Sara Shostak analyzes the rise of gene-environment interaction in the environmental health sciences and examines its consequences for how we understand and seek to protect population health. Drawing on in-depth interviews and ethnographic observation, Shostak demonstrates that what we know – and what we don't know – about the vulnerabilities of our bodies to environmental hazards is profoundly shaped by environmental health scientists' efforts to address the structural vulnerabilities of their field. She then takes up the political effects of this research, both from the perspective of those who seek to establish genomic technologies as a new basis for environmental regulation, and from the perspective of environmental justice activists, who are concerned that their efforts to redress the social, political, and economical inequalities that put people at risk of environmental exposure will be undermined by molecular explanations of environmental health and illness. *Exposed Science* thus offers critically important new ways of understanding and engaging with the emergence of gene-environment interaction as a focal concern of environmental health science, policy-making, and activism.

Conservation of Furniture Shayne Rivers, Nick Umney, 2007-06-07 This book is a comprehensive resource covering the principles and practice of the conservation and restoration of furniture, and other decorative art objects made wholly or partly of wood. It integrates theory with practice to show the principles which govern interaction between wooden objects, the environmental and conservation treatments and the factors which need to be taken into account to arrive at acceptable solutions to conservation problems. The practical knowledge and experience of a team of conservators active in the field are brought together with theoretical and reference material from diverse sources and unified within a systematic framework. Specialist conservators from related disciplines cover diverse materials often incorporated into furniture.

Behind the Curve Joshua P. Howe, 2014-04-01 In 1958, Charles David Keeling began measuring the concentration of carbon dioxide in the earth's atmosphere at the Mauna Loa Observatory in Hawaii. His project kicked off a half century of research that has expanded our knowledge of climate change. Despite more than fifty years of research, however, our global society has yet to find real solutions to the problem of global warming. Why? In *Behind the Curve*, Joshua Howe attempts to answer this question. He explores the history of global warming from its roots as a scientific curiosity to its place at the center of international environmental politics. The book follows the story of rising CO₂—illustrated by the now famous Keeling Curve—through a number of historical contexts, highlighting the relationships among scientists, environmentalists, and politicians as those relationships changed over time. The nature of the problem itself, Howe explains, has privileged scientists as the primary spokespeople for the global climate. But while the “science first” forms of advocacy they developed to fight global warming produced more and better science, the primacy of science in global warming politics has failed to produce meaningful results. In fact, an often exclusive focus on science has left advocates for change vulnerable to political opposition and has limited much of the discussion to debates about the science itself. As a result, while we know much more about global warming than we did fifty years ago, CO₂ continues to rise. In 1958, Keeling first measured CO₂ at around 315 parts per million; by 2013, global CO₂ had soared to 400 ppm. The problem is not getting better - it's getting worse. *Behind the Curve* offers a critical and levelheaded look at how we got here.

Blues for New Orleans Roger Abrahams, 2010-11-24 In the aftermath of Hurricane Katrina, as the citizens of New Orleans regroup and put down roots elsewhere, many wonder what will become of one of the nation's most complex creole cultures. New Orleans emerged like Atlantis from under the sea, as the city in which some of the most important American vernacular arts took shape. Creativity fostered jazz music, made of old parts and put together in utterly new ways; architecture that commingled Norman rooflines, West African floor plans, and native materials of mud and moss; food that simmered African ingredients in French sauces with Native American delicacies. There is no more powerful celebration of this happy gumbo of life in New Orleans than Mardi Gras. In Carnival, music is celebrated along the city's spiderweb grid of streets, as all classes and cultures gather for a festival that is organized and chaotic, individual and collective, accepted and licentious, sacred and profane. The authors, distinguished writers who have long engaged with pluralized forms of American culture, begin and end in New Orleans—the city that was, the city that is, and the city that will be—but traverse geographically to Mardi Gras

in the Louisiana Parishes, the Carnival in the West Indies and beyond, to Rio, Buenos Aires, even Philadelphia and Albany. Mardi Gras, they argue, must be understood in terms of the Black Atlantic complex, demonstrating how the music, dance, and festive displays of Carnival in the Greater Caribbean follow the same patterns of performance through conflict, resistance, as well as open celebration. After the deluge and the finger pointing, how will Carnival be changed? Will the groups decamp to other Gulf Coast or Deep South locations? Or will they use the occasion to return to and express a revival of community life in New Orleans? Two things are certain: Katrina is sure to be satirized as villainess, bimbo, or symbol of mythological flood, and political leaders at all levels will undoubtedly be taken to task. The authors argue that the return of Mardi Gras will be a powerful symbol of the region's return to vitality and its ability to express and celebrate itself.
