Rhinoceros Giants Donald R. Prothero, 2013 A book for everyone fascinated by the huge beasts that once roamed the earth, *Rhinoceros Giants: The Paleobiology of the Indricotheres*, introduces a prime candidate for the largest land mammal that ever lived - the giant hornless rhinoceros, *Indricotherium*. These massive animals lived in Asia and Eurasia for more than 14 million years, about 37 to 23 million years ago. They had skulls 2 metres long, stood over 7 meters at the shoulder, and were nearly twice as heavy as the largest elephant ever recorded, tipping the scales at 20,000 kg. Fortunately, the big brutes were vegetarians, although they must have made predators think twice before trying to bring them down. In this book for lovers of ancient creatures great and small, Donald R. Prothero tells their story, from their discovery by palaeontologists just a century ago to the latest research on how they lived and died, with some interesting side trips along the way.

Color and Learn Dinosaurs and Prehistoric Creatures Anthony Rao, Jan Sovak, 2002-10-09 The more than 120 gigantic creatures in this BIG book of prehistoric animals lived millions of years ago – and you can learn about them as you color each one's picture. Fact-filled captions.

Biology of the Sauropod Dinosaurs Nicole Klein, Kristian Remes, Carole T. Gee, P. Martin Sander, 2011-04-22 Sauropods, those huge plant-eating dinosaurs, possessed bodies that seem to defy every natural law. What were these creatures like as living animals and how could they reach such uniquely gigantic sizes? A dedicated group of researchers in Germany in disciplines ranging from engineering and materials science to animal nutrition and paleontology went in search of the answers to these questions. *Biology of the Sauropod Dinosaurs* reports on the latest results from this seemingly disparate group of research fields and integrates them into a coherent theory regarding sauropod gigantism. Covering nutrition, physiology, growth, and skeletal structure and body plans, this volume presents the most up-to-date knowledge about the biology of these enormous dinosaurs.

Organized chronologically, the creatures illustrated and described include: Sabre tooth tigers and woolly mammoths *Glyptodon* - the armadillo as big as a VW Beetle car *Megalodon* - the monster 60 foot (18m) shark *Water King* penguin - the red and grey penguin the size of a man *Ornimegalonyx* - the largest owl that ever existed *Deinotherium* - the huge, elephant-like creature with tusks positioned on its lower jaw and curved, facing downwards Short-nosed bear - the massive fearsome bear that kept North America human-free *Aurochs* - the striped wild bull with huge horns *Megatherium* - the giant sloth that was as large as a modern elephant Less celebrated than the dinosaurs, these beasts are equally impressive. Enjoy Matt Sewell's characteristic watercolour illustrations and witty, fascinating descriptions of these amazing creatures that once did stalk the planet.

After the Dinosaurs Charlotte Lewis Brown, 2011-06-28 After the age of the dinosaurs, strange and powerful mammals ruled the earth. . . . Paleontologist Charlotte Lewis Brown's easy-to-read and fascinating descriptions of these ancient animals are brought to life in Phil Wilson's detailed illustrations. Read about the largest mammal ever to walk on land, about a tiger with teeth longer than your hand, and about a horse the size of a dog! Mammals—some strange and some strangely familiar—ruled the earth after the dinosaurs. These compelling creatures are introduced to beginning readers by the team who created *The Day the Dinosaurs Died*. *After the Dinosaurs* is a Level Two I Can Read, geared for kids who read on their own but still need a little help. The Rhino Keepers Clive Walker,Anton Walker,2012 The conservation of the rhinos in southern Africa is described in this account of these fascinating animals, the reasons behind their historical decline, the myths that surround them, and the resurrection of the rhinoceros horn trade. Few animals face as violent, as well organized, and as determined an enemy as the world's rhinos. But across the African continent, they are being slaughtered on a daily basis, and approximately 5,000 black rhinos and 21,000 white rhinos are all that prevent their extinction. This real account of the rhino wars is a harrowing story, underscoring the enormous challenges that lie ahead for conservation in a world where rhino horns sold by the gram raise double the price of gold and are more expensive than cocaine in the end-user Asian markets. Arguing that protecting Africa’s rhinos is of utmost importance, it questions the management of natural heritage and implores readers to recognize their role as rhino keepers of the future.

Dinosaurs and Other Prehistoric Animals Alfred Leutscher,1971 Describes the characteristics of various extinct animals as reconstructed from their fossilized remains.

Evolution Donald R. Prothero,2017-08-22 Donald R. Prothero’s *Evolution* is an entertaining and rigorous history of the transitional forms and series found in the fossil record. Its engaging narrative of scientific discovery and well-grounded analysis has led to the book’s widespread adoption in courses that teach the nature and value of fossil evidence for evolution. *Evolution* tackles systematics and cladistics, rock dating, neo-Darwinism, and macroevolution. It includes extensive coverage of the primordial soup, invertebrate transitions, the development of the backbone, the reign of the dinosaurs, and the transformation from early hominid to modern human. The book also details the many alleged “missing links” in the fossil record, including some of the most recent discoveries that flesh out the fossil timeline and the evolutionary process. In this second edition, Prothero describes new transitional fossils from various periods, vividly depicting such bizarre creatures as the *Odontochelys*, or the “turtle on the half shell”; fossil snakes with legs; and the “Frogamander,” a new example of amphibian transition. Prothero’s discussion of intelligent design arguments includes more historical examples and careful examination of the “experiments” and observations that are exploited by creationists seeking to undermine sound science education. With new perspectives, Prothero reframes creationism as a case study in denialism and pseudoscience rather than a field with its own intellectual dynamism. The first edition was hailed as an exemplary exploration of the fossil evidence for evolution, and this second edition will be welcome in the libraries of scholars, teachers, and general readers who stand up for sound science in this post-truth era.

The Walking Whales J. G. M. Thewissen,2015 A ... first-person account of the discoveries that brought to light the early fossil record of whales. As evidenced in the record, whales evolved from herbivorous forest-dwelling ancestors that resembled tiny deer to carnivorous monsters stalking lakes and rivers and to serpentlike denizens of the coast. Thewissen reports on his discoveries in the wilds of India and Pakistan, weaving a narrative that reveals the day-to-day adventures of fossil collection, enriching it with local flavors from South Asian culture and society--Dust jacket flap.

Across Mongolian Plains Roy Chapman Andrews,2019-11-26 Embark on a thrilling adventure across the enigmatic Mongolian plains in this book by renowned explorer Roy Chapman Andrews. Join the Second Asiatic Expedition of the American Museum of Natural History as they venture into the unexplored territories of Mongolia and North China, uncovering secrets of the wild and encountering captivating wildlife. From the very first page, Andrews shares his enthralling experiences in the vast Mongolian landscapes, capturing the essence of this remote and mysterious region. The Ecology of Large Herbivores in South and Southeast Asia Farshid Ahrestani,Mahesh Sankaran,2016-04-02 Large terrestrial mammalian herbivores play critical roles in ecosystems by acting as regulators of energy and nutrient cycles, modulators of plant community composition and grassland-woodland transitions, agents of seed dispersal, and as prey for large carnivores. Though large herbivores represent a prominent component of mammalian assemblages throughout South and Southeast Asia, little is known about their roles in ecosystems in the region. This volume presents, for the first time, a collection of studies on the ecology of the rich and diverse large herbivore assemblages of South and Southeast Asia. Prepared by experts on herbivores of the region, it covers a comprehensive range of topics, including their evolutionary history, behavioural, nutritional, and

population ecology, patterns of diversity across environmental gradients, roles as seed dispersers and regulators of plant growth, community compositions, and their conservation in the face of hunting and global change.

Steles of the Sky Elizabeth Bear,2014-04-08 Elizabeth Bear concludes her award-winning epic fantasy trilogy, The Eternal Sky, with Steles of the Sky. Re Temur, exiled heir to his grandfather's Khaganate, has finally raised his banner and declared himself at war with his usurping uncle.
