Astronomy from Space James Cornell, Paul Gorenstein, 1983 Since the Space Age began a quarter-century ago, astronomers have been able to reach out and often touch celestial bodies that formerly could only be dimly viewed from afar. Probes have flown by or landed on many of the planets. Astronauts have made direct observations from Earth orbit and on the Moon. Most important, a host of satellites in Earth orbit have recorded the emissions of X-ray, infrared, and ultraviolet radiation from distant sources normally invisible beneath the atmosphere. And when the Space Telescope goes aloft, man's vision of the cosmos will be extended further still. The essays in this book describe the results of twenty-five years of space observation, summarize what has been learned so far, and speculate on the possibilities that are now within grasp. Leo Goldberg provides a point of departure by describing what astronomy was like when it was limited to peering at the night sky through Earthbound telescopes. Goldberg also expresses the hopes astronomers had for discovery in the anticipated Age of Space. The chapters that follow reveal what has been discovered about the geological features of the inner planets (James W. Head, III), the Moon (John A. Wood), the giant planets as seen during the close encounters of the Voyagers (Bradford A. Smith), and the Sun (Randolph H. Levine). The next chapters document the first ventures into deep space and describe the understanding of a previously invisible universe revealed by ultraviolet sources (Andrea K. Dupree) and X-ray sources within the Milky Way (Jonathan E. Grindlay) and beyond (Paul Gorenstein). George B. Field, who chaired the National Academy of Science committee charged with developing priorities for U.S. astronomical research in the 1980s, discusses the future of space astronomy. An epilogue by Ursula B. Marvin describes a planet body that until recently had never been seen from the vantage point of space: the Earth itself. The editors and most of the contributors are affiliated with the Harvard-Smithsonian Center for Astrophysics. James Cornell also edited, with Alan P. Lightman, *Revealing the Universe: Prediction and Proof in Astronomy* (MIT Press paperback).

The Hinode Mission Takashi Sakurai, 2008-12-03 The Solar-B satellite was launched in the morning of 23 September 2006 (06:36 Japan time) by the Institute of Space and Astronautical Science, Japan Aerospace Exploration Agency (ISAS/JAXA), and was renamed to Hinode ('sunrise' in Japanese). Hinode carries three instruments; the X-ray telescope (XRT), the EUV imaging spectrometer (EIS), and the solar optical telescope (SOT). These instruments were developed by ISAS/JAXA in cooperation with the National Astronomical Observatory of Japan as domestic partner, and NASA and the Science and Technology Facilities Council (UK) as international partners. ESA and Norwegian Space

Center have been providing a downlink station. All the data taken with Hinode are open to everyone since May 2007. This volume combines the first set of instrumental papers of the Hinode mission (the mission overview, EIS, XRT, and the database system) published in volume 243, Number 1 (June 2007), and the second set of papers (four papers on SOT and one paper on XRT) published in Volume 249, Number 2 (June 2008). Another SOT paper cited as Tarbell et al. (2008) in these papers will appear later in Solar Physics.

Exploring the Universe with the IUE Satellite Y. Kondo,Willem Wamsteker,A. Boggess,M. Grewing,C. de Jager,A.L. Lane,Jeffrey L. Linsky,R. Wilson,2013-12-11 This book was conceived to commemorate the continuing success of the guest observer program for the International Ultraviolet Explorer (IUE) satellite observatory. It is also hoped that this volume will serve as a useful tutorial for those pursuing research in related fields with future space observatories. As the IUE has been the product of the three-way collaboration between the U.S. National Aeronautics and Space Administration (NASA), European Space Agency (ESA) and the British Engineering and Research Council (SERC), so is this book the fruit of the collaboration of the American and European participants in the IUE. As such, it is a testimony to timely international cooperation and sharing of resources that open up new possibilities. The IUE spacecraft was launched on the 26th of January in 1978 into a geosynchronous orbit over the Atlantic Ocean. The scientific operations of the IUE are performed for 16 hours a day from Goddard Space Flight Center in Greenbelt, Maryland, U.S.A, and for 8 hours a day from ESA Villafranca Satellite Tracking Station near Madrid, Spain.
